SUPPLEMENTARY REAL AND PERSONAL PROPERTY INVENTORY REPORT (CIVILIAN AND MILITARY) OF THE UNITED STATES GOVERNMENT LOCATED IN THE UNITED STATES, IN THE TERRITORIES, AND OVERSEAS AS OF JUNE 30, 1956

PART I

INTRODUCTION

On March 21, 1956, the Committee on Government Operations issued its 12th intermediate report (Rept. No. 1930, 84th Cong., 2d sess.), submitted by the Executive and Legislative Reorganization Subcommittee, entitled "Real and Personal Property Inventory Report (Civilian and Military) of the United States Government, Located in the United States, in the Territories, and Overseas, as of June 30, 1955." As stated in that report, this represented the first attempt in the history of our Government to prepare an inventory of Federal realty and personalty.

The 1955 Federal Property Inventory Report represented considerable time, effort, and coordination on the part of representatives of all Government departments and agencies, as well as the committee staff, in covering vast areas of inventories. An undertaking of such a project was long overdue. Efforts of the committee and its staff charted the course in the preparation of such an inventory report, and interest was stimulated in the project. Complete cooperation was received by the committee staff which enabled the successful preparation of a most useful compilation of data. Because of the time element involved, some assets were omitted from the initial report. Acquisition cost figures were used for personalty and realty assets.

In pursuing its objectives of continuing, broadening, and improving an up-to-date inventory of realty and personalty assets of the United States Government, the committee has prepared a supplementary Federal property inventory report listing inventories, as of June 30, 1956, of the Federal Government. These inventories are located in the United States, its Territories and at overseas bases and installations.

Further concentrated efforts have been made during the past few months by the committee staff assigned to this project in working with Government department and agency representatives, including those of the Department of Defense, ultimately to engender a "balance sheet" approach in the listing of Federal assets and liabilities for inclusion in a Federal property inventory report. This approach, however, will require additional time and will not become a reality until current estimated evaluations (in dollars and cents) can be placed on all Federal real estate, most of which is presently recorded at acquisition cost on the books of the Federal Government. Considerable progress has been made by the committee to date in improv-

ing the Federal property inventory report. Improved accounting procedures within the Government are largely responsible for more accurate inventory accountability and reporting. These refinements are reflected herein.

FEDERAL PERSONALTY

Personalty inventory figures were furnished the committee last year by the General Accounting Office. This year these figures have been furnished by the United States Treasury Department. In recommending this innovation in reporting, the Comptroller General, in a letter to Chairman Dawson, stated:

> We feel that effective results will be obtained under this arrangment whereby the Treasury Department will, as part of their responsibility under the Budget and Accounting Procedures Act of 1950, provide the financial data for your report.

This supplementary inventory report includes some personalty assets which were omitted from the 1955 report, particularly in the Department of Defense and Capitol Hill properties. Refinements and improvements are reflected throughout this portion of the report because of improved accounting procedures in Government departments and agencies. Today inventories are better accounted for than at any time during the past.

Federal personalty (exclusive of cash and related cash items) is currently, and will continue to be, reported at acquisition cost. This manner of reporting the value of personalty assets has been discussed with representatives of the General Accounting Office and the Treasury Department. It is the consensus that this approach represents a realistic method of evaluating personalty items, especially in light of replacement cost and in considering amounts received for such items when they are declared surplus and offered for sale. The tremendous undertaking of attempting to evaluate millions of personalty items (such as file cases, desks, "in" and "out" desk boxes, staplers and similar office items, as well as machinery, tools, mechanical equipment, etc.) owned by the Federal Government and to place a current "fair market value" on individual or categories of items is an impossible and impracticable task. In the first place, many of these items have little or no market value on a private market, and secondly, even if the task were undertaken, it would take years to complete such an inventory. By the time current estimated market value figures could be compiled on items inventoried initially they would be outdated by publication date. It is also possible that during such a time-consuming period, a percentage of the inventoried items, for various reasons, would have been disposed of by the using department or agency. It must be borne in mind, however, that some items of personalty reported in this supplementary inventory report could not be replaced at the recorded acquisition cost. This is due to increased costs of materials and labor used in manufacturing these items.

The June 1955 Property Inventory Report listed various categories of personalty at "no value," i. e., paintings, portraits, statues, publications, etc. This supplementary Federal property inventory report includes many estimated or known values of these properties.

It should also be recognized that the acquisition cost recorded for some buildings and facilities is representative of present-day evaluation. This is true when considering the value of buildings and facilities which have recently been constructed.

FEDERAL REALTY, EXCLUDING PUBLIC DOMAIN PROPERTIES

Federal realty, whether purchased or acquired otherwise—excluding public domain property—is listed again in this Federal supplementary inventory report at acquisition cost. Realty values in most instances were recorded at acquisition cost in the 1955 report. Donated properties or those obtained by the Federal Government without cost were recorded at "no value." It was proposed at the time of the adoption of the Federal property inventory report, covering assets as of June 30, 1955, that the supplementary Federal property inventory report, as of June 30, 1956, should record Federal realty assets at present-day values.

Attention is called to the fact that construction work in progress figures of the Department of Defense are omitted from the realty portion of this supplementary property inventory report. Figures in this area have been compiled by the Department of the Air Force and the Corps of Engineers, civil functions, but have not been completed for other military departments.

Progress is being made in the accounting for these assets in the military such as is being done by other Government departments and agencies. The committee has been informed that it is expected that its property inventory report of next year will reflect current figures in this area, on a uniform basis, for all the military departments.

This will be another step forward in fully realizing the objectives of a comprehensive and complete listing of all Federal assets in all areas, rather than limited reporting in selected categories.

The committee is, and has been, aware of the inevitable fact that an accepted uniform procedure would have to be established for all Government departments to follow in evaluating Federal lands, as well as the buildings and facilities located thereon. This is mandatory if consistent and accurate figures are to be furnished the committee by the General Services Administration for use in a Federal property inventory report. Various methods of evaluation have been discussed time and again by committee staff members and representatives of the General Services Administration, the Department of the Treasury, the General Accounting Office, and other Government departments and agencies. The question of whether to use an "in use" value, a "replacement basis" value, or some other standard has been considered. Much Federal realty falls into a category of its own and cannot be evaluated by a generalized scale approved and adopted by accredited real estate organizations or boards. For instance, military bases, which generally represent a considerable outlay of Federal funds, may be of practically no use to private investors after a base has been deactivated, declared surplus, and offered for sale. By the same token, many Federal buildings (such as the United States Capitol Building, the Supreme Court Building, the Library of Congress, etc.) would have little market value as office buildings. They would have considerable "shrine" value, but the private investor market for other

utility would not be great. These factors have to be considered when attempting to value Federal realty. In view of these known factors, it was decided not to prescribe an evaluation process hurriedly and thus record and publish estimated values on Federal realty which would be considered unrealistic and considered inaccurate when reviewed by accredited real estate appraisers.

It was recognized that a uniform procedure would have to be established—one applicable to all Federal departments and agencies in evaluating individual parcels and various categories of realty. Also, it was the consensus that these desired procedures would have to be formulated with the benefit of professional advice and that the actual appraising would have to be done as quickly as possible and, where feasible, by and with competent engineering and real estate personnel presently assigned within the Government. By using the experience of qualified Government personnel, it would be unnecessary to engage private real estate appraisers and thereby incur the tremendous expense for those services. Because of the magnitude of the project, it is doubtful that the required number of qualified appraisers could be readily engaged to participate in the undertaking.

In computing costs of Federal realty, it is recognized that the acquisition cost figure, in some instances, will reflect the present-day value of such realty. This is true in cases of realty which has been purchased during the past few years at current market price. Buildings and facilities which have been constructed on Federal realty during the past few years, even though recorded at acquisition cost, will reflect a present-day value.

In keeping with the desires of the committee, the Architect of the Capitol has furnished realty figures for inclusion in this supplementary Federal inventory report which reflect present-day evaluations on properties under his control.

FEDERAL REAL ESTATE—EVALUATING PROCEDURES AND ASSISTANCE RENDERED THE COMMITTEE BY THE AMERICAN INSTITUTE OF REAL ESTATE APPRAISERS

With the above thoughts in mind, the committee staff working on this project met with Congressman John E. Moss, Jr., to seek his advice, based on his past private experience, concerning the most appropriate means of arriving at a formula in evaluating Federal real estate. He suggested that guidance in the matter could probably be obtained from a recognized national institute of real estate appraisers who could set guidelines or yardstick procedures to be employed. Or, as an alternative, it was suggested that desired data on Federal realty might be obtained from county tax assessors throughout the United States who possibly have recorded on State tax rolls approximate current evaluations on Federal realty located therein.

With these alternatives in mind, the committee staff, with the approval of the chairman of the committee, sought advice and assistance from Mr. Harry Grant Atkinson, executive director, American Institute of Real Estate Appraisers, in Chicago, Ill. Mr. Atkinson was most receptive to the inquiry and suggested that the desires of the committee be brought to the attention of the officers and members of the executive committee of the institute (who were meeting in

Chicago in May of this year). Subsequently a request for a conference was sent to Mr. A. N. Lockwood, president of the American Institute of Real Estate Appraisers (of the National Association of Real Estate Boards). A conference was arranged to take place at the Drake Hotel in Chicago on Friday, May 4. At the conference Messrs. Poland, Young, and Wade, of the committee staff, outlined the desires of the committee and informally requested assistance from the institute in setting acceptable guidelines to estimate values of Federal realty. Copies of the June 30, 1955, Federal Property Inventory Report were furnished all those in attendance at the meeting. At the conclusion of the meeting, President Lockwood advised the committee staff members that the appraisal procedure guidelines would be discussed further within the association and that an advisory committee would be formed to assist the committee in its endeavor.

Subsequent advice was received from Mr. Lockwood to the effect that an advisory committee, composed of eminently well-qualified men from the membership of the institute, had been appointed to assist the committee in its request. The advisory committee consists of Mr. Watson A. Bowes, 502 California Building, Denver, Colo.; Mr. George Goldstein, 810 Broad Street, Newark, N. J.; and Mr. E. D. Keefer, 530 Lincoln Road, Miami Beach, Fla. President Lockwood further advised Chairman Dawson:

> They [the members of the advisory committee] are willing to come to Washington, D. C., on the committee's invitation for such a purpose. The institute appreciates this opportunity to be of service to your committee.

The three members of the advisory committee of the American Institute of Real Estate Appraisers assisting the committee in setting appraisal guidelines are all past presidents of the institute. In explaining the position of their organization in this public-spirited undertaking, Mr. Watson Bowes explained:

> The institute has undertaken this particular assignment as a pro bono publico activity because if the combined experience that the institute has had in solving appraisal problems can be of value to the Government, we are glad to cooperate. We are mighty glad to give this service without cost to the Government.

The results of the meeting in Chicago were brought to the attention of representatives of the General Services Administration, the Department of Defense, and the Treasury Department. The General Services Administration serves as the committee's agent for reporting Federal realty, at present on an acquisition-cost basis, and at a future date at current estimated evaluation.

A special conference was called to convene in Washington on October 9, 1956, attended by the advisory committee of the American Institute of Real Estate Appraisers, top-level officials of Government departments, and the committee staff for the purpose of discussing procedure guidelines which could be employed in evaluating Federal real estate. The results of the meeting were most rewarding. Suggested procedures and methods necessary to accomplish the desires of the committee were discussed. Copies of the minutes of the meeting are available in the committee files on a request-for-use basis. Cooperation has been pledged by all departments represented at the

conference to assist the committee in accomplishing the task of bringing estimated values of Federal realty up to date rather than continuing present recording practices.

The long-term effect of agreements reached at the meeting will result in the establishment of suitable standard evaluation procedures, based upon techniques consonant with approved professional standards.

Unanimity was prevelant in the decision that the best considered approach to this evaluating task would be to value Federal realty at estimated replacement cost, less depreciation. This proposed method was suggested by the advisory committee of the American Institute of Real Estate Appraisers and appeared to be acceptable to representatives attending the meeting.

It was proposed that the Government interagency committee be set up and put into operation immediately; further, that guidlines be established, which could be reviewed and approved by the Government departments and agencies, the Committee on Government Operations, and the advisory committee of the American Institute of Real Estate Appraisers by January 1, 1957. A schedule was set so that the committee would be furnished in November of 1957 with up-to-date evaluations, based on an "estimated replacement cost, less depreciation" basis, covering one-half the Federal realty listed in this supplementary property inventory report. The date of November 1958 was prescribed as the date the committee would be able to print a complete tabulation of estimated present-day values of all Federal realty. In other words, the evaluation process would be completed in 2 years' time.

Progress is being made within the Government interagency committee in meeting the requirements of the committee based on the prescribed schedule mentioned above.

When projected plans become a reality, real estate figures recorded on the books of the Federal Government will reflect estimated present-day values. No longer will some acreage be listed at $1 per acre, nor will installations such as the Presidio and Governors Island, whose values run into the millions, be listed at $1 each. A realistic figure will be applied to the White House Grounds, for example, in place of the acquisition cost figure of $1,600. Donated properties, obtained at no cost to the Government, will reflect estimated current values.

This approach, coupled with other refinements, will enable the committee to present a Federal property inventory report far more realistic, practical, and useful than one in which only acquisition cost figures are used.

PUBLIC DOMAIN PROPERTIES

In an effort to enlarge the scope of last year's Federal property inventory report, this supplementary report includes public domain properties at estimated current evaluations. These properties heretofore have been listed as to location, size, and usage. The June 30, 1955, inventory lists 357,210,164.4 acres of public domain lands located throughout the United States and 343,059,859.3 acres in the Territories. Buildings and facilities located on these lands were recorded at acquisition cost, in accordance with prescribed regulations of the General Services Administration. These properties, needless to say, represent a considerable asset of the United States Government. They have never, in the history of our Government, been properly evaluated.

An attempt was made in 1937 to evaluate public domain acreage. After considerable time, effort, and funds had been expended, the resultant declared value of these lands was $1.25 per acre. That figure certainly in no way reflects the true value of these lands—either in 1937 or 1956. One of the objectives of this committee undertaking has been to face this situation realistically and to delve into these property areas and encourage improved accounting of known Federal assets.

Inquiry was made of the General Services Administration as to whether or not present-day values of public domain lands, as well as buildings and facilities located thereon, could be obtained for inclusion in the June 30, 1956, Supplementary Federal Property Inventory Report. Many discussions took place concerning these properties and suggested ways and means of evaluating them. The committee was informed that this phase of the inventory because of its magnitude represented a tremendous undertaking and would require considerable time as well as the services of qualified appraiser personnel. Because of these factors, advice was received that estimated values could not be obtained for inclusion in the supplementary Federal property inventory report in a few months' time. Consequently it was decided that departments and agencies having public domain properties under their jurisdiction would be contacted direct in an endeavor to obtain the desired data. Initial requests were directed to the Departments of Agriculture and Interior (the two largest holders of public domain lands). The response was most favorable and the committee was informed that the task, even though great, was not an impossible one and that end results could be obtained—in line with the desires of the committee. It was noted that overall estimated present-day values could be determined by qualified field representatives presently employed in the real property field offices of the departments rather than having to engage the services of private professional appraisers. It was agreed that the Department of the Interior would be responsible for determining overall values of mineral, oil, and ore deposits for all the departments and agencies and that the Department of Agriculture, likewise, would be responsible for setting overall values on timberlands, grazing lands, and grazing rights. In contacts with the other departments and agencies, these arrangements appeared satisfactory. Reaction was favorable and the results are shown in this report.

Government field representatives indicate that various means of evaluating these properties have been employed. In most instances, figures listed in this report represent values based on current selling price of privately owned properties adjoining Government-owned lands and the most recent dollar value received for materials sold from these properties where the value of such materials influenced the value of the real estate.

In some instances, the values of buildings and facilities located on public domain lands are listed at "estimated present-day value." However, where such estimates were not obtainable in the short period of time available for evaluation purposes, buildings and facilities are listed at acquisition cost. It is the desire of the committee to have all buildings and facilities located on these properties represented in future reports at estimated present-day evaluation.

Data on public domain properties were submitted to the committee direct for inclusion in this supplementary Federal property inventory

report. Cooperation and assistance have been received from each department and agency having jurisdiction over public domain properties.

ACKNOWLEDGMENTS

Acknowledgment is made to Government department and agency representatives who have been of assistance to the committee in the preparation of this report. They have been particularly helpful to the committee in furnishing needed data, either direct or on a representative-for-agency basis.

Without the able assistance of qualified Government representatives, the compilation of accurate data in the realty and personalty field, as represented in this report, would not have been possible.

CONCLUSION

Our goal has been set. The committee expects to present as soon as possible an accurate up-to-date listing of Government personalty and realty assets which reflect estimated current values. With continued assistance from Government representatives, this objective can be reached in the near future. The scope is of great extent and the job is not finished. However, interest in this project is constantly increasing both within Government and from private enterprise. Forestry associations and representatives, for instance, have been following the progress of the committee's efforts with great concern. More and more requests are being received from schools and business concerns for copies of the June 30, 1955, Federal Property Inventory Report.

In compiling data of a classified nature for inclusion in this report, the committee has kept in mind the importance and necessity of security regulations. Efforts have been made to record classified data in a manner so as to insure accuracy and at the same time remain informative. Breakdown figures have been used in each instance possible, and only in restricted areas have lump-sum figures been recorded. Substantiating data covering classified areas are available within the departments for those qualified to see and study on a need-for-use basis.

Government property representatives assisting in this endeavor are deeply interested in improving records representing the Government's investment in real and personal property. It is established that the need is great for an up-to-date Federal property inventory report such as the committee has undertaken. This project does, and will continue to, reflect various economic changes in values as well as improved inventory reporting practices. The results, represented in informative report form, will be of constant utility.

As progress is made in improved accounting and reporting of Federal assets and in evaluation procedures, the value of Government-owned properties will become more meaningful, especially when comparing total Federal assets against the size of the current public debt. In considering the various evaluation stipulations employed herein, the total value of Federal property assets listed in this report amounts to $236 billion, as of June 30, 1956. The national debt at the end of the 1956 fiscal year totaled $273 billion. That figures out to about $1,623 for each man, woman, and child. The gross public debt, as of October 19, 1956, was reported as being approximately $276 billion.

The committee is fulfilling the requirements set forth in the original intent of House Resolution 26 which was introduced in the House of Representatives on January 5, 1955, by Congressman Dies, and which was referred to the House Committee on Government Operations.

Concentrated efforts will continue and as the Federal property inventory report project is improved and refined, the entire Government Establishment, as well as the American people, will benefit from having current property inventory data of the Federal Government, represented in annual report form, covering assets which are located in continental United States, the Territories, and at overseas bases.

PART II

MASTER RECAPITULATION OF FEDERAL PERSONALTY AND REALTY ASSETS OF THE UNITED STATES GOVERNMENT AS OF JUNE 30, 1956.

85132—56——2

Grand Recapitulation of the Personalty and Realty Assets of the U. S. Government (Executive Agencies, Offices, and Establishments of the Government, Including the Department of Defense) as of June 30, 1956

	1956 (In thousands)	1955	Increase or decrease (In thousands)
Personalty	$179,410,496	$168,384,195,879.42	$11,026,300
Realty (excluding public domain)	41,931,287	39,529,297,658.00	2,401,989
Public domain realty (including mineral resources)[1]	14,160,362		14,160,362
Grand total	235,502,145	207,913,493,537.42	27,588,651

[1] Computed at present-day evaluation.

PART III

PERSONALTY INVENTORY OF EXECUTIVE, LEGISLATIVE AND JUDICIARY OFFICES, AGENCIES AND ESTABLISHMENTS OF THE U. S. GOVERNMENT, AS OF JUNE 30, 1956

REAL AND PERSONAL PROPERTY OF THE DEPARTMENT OF DEFENSE AS OF JUNE 30, 1956

Worldwide Government Personalty Recapitulation as of June 30, 1956

[In thousands of dollars]

Agency or department:	Amount
Executive, legislative, and judiciary offices, agencies, and establishments of the U. S. Government, excluding the Department of Defense	68, 061, 296
The Department of Defense	111, 164, 000
Corps of Engineers, civil functions	185, 200
Grand total	179, 410, 496

Note.—The June 30, 1955, property inventory report listed a grand total of personalty amounting to $168,384,195,879.42. Figures in this supplementary inventory report represent an increase, as of June 30, 1956, in personalty assets amounting to $11,026,300.

TREASURY DEPARTMENT

Washington 25, D. C.

SUMMARY STATEMENT

In April 1956, William L. Dawson, Chairman, Committee on Government Operations, House of Representatives, advised the Secretary of the Treasury of the responsibility of the committee for conducting a study and investigation of the properties and assets of the United States Government and requested the cooperation and assistance of the Treasury Department in securing information as to the personal property of the United States Government. Accordingly, on June 1, 1956, the Department issued Supplement No. 1 to Circular No. 966 requiring the furnishing of a statement of assets, as of June 30 of each fiscal year, by all executive agencies not reporting under Circular No. 966. The supplement also requested that complete statements of financial condition which would include liabilities and net investments as well as assets be reported by those agencies prepared to do so.

All agencies of the Government which were affected cooperated to the fullest extent in furnishing to the Treasury Department, for use by the committee, data on assets held by each respective agency. In all, 147 agencies reported and these reports are summarized on the statement which follows in this report. A comparative analysis of personal property of the United States Government, excluding the Defense Department which is reported elsewhere, is as follows:

Comparative figures on personal property of the U. S. Government (excluding Defense Department reported elsewhere), as of June 30, 1955 and 1956

[In thousands of dollars]

Classification	June 30, 1956	June 30, 1955	Increase, 1956 over 1955	Decrease, 1956 over 1955
Cash on hand, in banks, etc	7,403,451	7,848,112		444,661
Investments in securities	3,811,514	3,626,400	185,114	
Accounts and notes receivable	6,573,861	3,947,274	2,626,587	
Commodities for sale	6,135,904	5,085,602	1,050,302	
Work in progress	1,456,451	1,288,071	168,380	
Materials and supplies	6,793,807	6,319,521	474,286	
Loans receivable	18,795,985	18,997,477		201,492
Machinery and equipment	10,551,056	10,316,098	234,958	
Other assets	6,539,267	3,427,741	3,111,526	
Total	68,061,296	60,856,296	7,851,153	646,153

As is noted above, there was approximately a $7.2 billion increase in personal property held by all agencies of the Government exclusive of that reported by the Department of Defense in another section of this report. The major increases represent items omitted in the June 30, 1955, figures, such as certain personal assets of the Department of Defense and the Federal National Mortgage Association, as

well as investments of the Government in certain agencies whose assets are not reported in the statement. Other major changes reflect either a reclassification of certain assets or increases resulting from the operations of certain agencies.

The largest single asset shown in this statement is that of loans outstanding which amounted to $18.8 billion. An analysis of these loans shows the nature of same by type of loan:

Gross Loans Outstanding, Excluding Interagency Loans, June 30, 1956

[In thousands of dollars]

Type of loan:	*Amount*
To aid agriculture	6, 407, 121
To aid home owners	3, 158, 708
To aid industry	619, 845
To aid States, Territories, etc	227, 497
To aid financial institutions	7, 160
Foreign loans	8, 200, 323
Other loans	175, 331
Total loans receivable	18, 795, 985

Treasury Department Circular 966 relates to the submission of business-type financial statements of all Government corporations and certain unincorporated agencies. The statements required are a "Statement of Financial Condition," "Statement of Income and Expense," "Statement of Sources and Application of Funds," and a "Statement of Long-range Commitments and Contingencies." This regulation provides a framework for ultimately obtaining data necessary to disclose as complete as may be desirable and practical the assets and liabilities of the entire Government.

Supplement No. 1 to Circular No. 966, which was issued to furnish the data requested by the Committee on Government Operations, was instrumental in advancing the central reporting objectives of the Treasury Department. It contributed to a greater disclosure of the Government's financial operations and made Government fiscal and financial officials more aware of the need for the reporting of the proprietary accounts of the U. S. Government on an over-all basis. Complying with the requirements of this Supplement, many agencies furnished complete information on all their assets and liabilities and investment of the Government and other agencies have initiated programs for securing financial data on all of their proprietary accounts.

STATEMENT ON PERSONAL PROPERTY OF THE UNITED STATES GOVERNMENT AS OF JUNE 30, 1956

[1] Includes materials held for national defense.

[2] Includes certain figures on personal property for Department of Defense not included under the special section of real and personal property of that Department in this report.

[3] Except with respect to the indebtedness of the Government of Finland ($6,513,883) this does not include the principal on World War I debt accounts ($11,426,666,509) on which payments have not been received since 1933.

[4] Does not include an amount of $28,101,644 representing loans to various States pursuant to the act approved June 23, 1836, on which no payments have been received.

[5] Includes interest receivable on World War I indebtedness of the Government of Finland of $279,364. Excludes amount of $6,448,043,520 representing interest receivable on other World War I debt accounts on which payments have not been made since 1933.

NOTE.—All assets herein reported are shown in gross amounts with no deductions for allowances for losses and depreciation. Only wholly Government-owned corporations and wholly owned assets are included. Assets held under trust arrangements and interagency assets are excluded.

[5] Includes interest receivable on World War I indebtedness of the Government of Finland of $279,364. Excludes amount of $6,448,043,520 representing interest receivable on other World War I debt accounts on which payments have not been made since 1933.

TREASURY DEPARTMENT

FISCAL SERVICE

Washington

REGULATION RELATING TO THE SUBMISSION OF CERTAIN FINANCIAL STATEMENTS BY GOVERNMENT AGENCIES

1956
Department Circular No. 966
Supplement No. 1

Fiscal Service
Bureau of Accounts

TREASURY DEPARTMENT,
OFFICE OF THE SECRETARY,
Washington, D. C., June 1, 1956.

To Heads of Departments and Agencies and Others Concerned:

The Treasury Department has been requested to furnish the Committee on Government Operations, House of Representatives, with information on properties and assets of the United States Government in connection with the committee's responsibilities for conducting a continuing study of the assets of the Government.

Accordingly, Department Circular No. 966, dated January 30, 1956, is amended as follows:

SCOPE

1. Paragraph 3 is amended by adding the following subparagraph d:

"d. Each executive agency and activity not included in the preceding subparagraphs."

PERIODIC REPORTS REQUIRED

2. The first sentence in paragraph 6 is amended to read as follows:

"Agencies responsible for the administration of corporate or noncorporate activities of the type specified in subparagraphs a, b, and c of paragraph 3 shall furnish all of the following periodic financial statements for each such activity whereas agencies referred to in subparagraph d or paragraph 3 are requested to furnish only the Statement of Financial Condition referred to in subparagraph a of this paragraph."

EFFECTIVE DATE

3. This supplement is effective immediately.

W. RANDOLPH BURGESS,
Acting Secretary of the Treasury.

TREASURY DEPARTMENT

FISCAL SERVICE

Washington

INSTRUCTIONS UNDER SUPPLEMENT NO. 1, TREASURY DEPARTMENT CIRCULAR NO. 966

Relating to the submission of certain financial statements by Government agencies

AUTHORITY FOR INSTRUCTIONS

1. These instructions are issued pursuant to Supplement No. 1, dated June 1, 1956, to Treasury Department Circular No. 966 of January 30, 1956, which requires all executive agencies not heretofore reporting under this regulation to furnish the Treasury Statements of Financial Condition.

AGENCY LIAISON

2. All questions pertaining to the regulations or these instructions should be submitted to the Bureau of Accounts, Treasury Department.

COVERAGE OF REPORTS

3. The reports required shall cover all programs and activities under the control of the agency reporting including those operations conducted in the Territories or overseas. Trust programs or activities will be reported separately and identified as such. Agencies maintaining accounts at the bureau level will submit individual bureau reports without consolidation. Assets and liabilities accounted for at the departmental level and not included in the individual bureau reports should be reported separately so that all assets of the department will be included.

REPORTS REQUIRED

4. Executive agencies now reporting under Department Circular No. 966 will continue to do so in accordance with the provisions of the circular, and instructions issued pursuant thereto, except that an additional copy of the Statement of Financial Condition as of the end of each fiscal year and each schedule supporting such statement shall be submitted to the Treasury Department. All other appropriation and fund account activities not now being reported upon quarterly under Department Circular No. 966 shall be reported upon on a consolidated "Statement of Financial Condition," Standard Form 220, insofar as practicable, in accordance with the requirements of Section II of the instructions issued under Treasury Department Circular No. 966 with the following exceptions:

a. Supplemental schedules 1 through 5 supporting the Statement of Financial Condition will not be required. However, the supplementary statement indicating the basis of figures and special accounting practices required by paragraph 6 of the instructions shall be submitted for all activities and funds reported. Such supplementary statement may be furnished by November 1, if any agency finds that additional time is needed for its preparation.

b. In lieu of reporting "Net Investment" as required by paragraphs 30 through 34 of the instructions, line 68 may be used for reporting the amount of "Unexpended Appropriations" and line 69 may be used for reporting "Invested and Donated Capital" or its equivalent. Such titles shall be typed in.

c. It is recognized that some agencies, having primarily administrative-type activities may not yet have developed their formal accounting procedures to provide balance sheet types of financial statements. For such agencies only the "Asset" side of the Statement is required at this time. However, those agencies not reporting a complete "Statement of Financial Condition" should advise the Treasury as to the probable date that such Statements can be expected.

d. An original and one copy of each report shall be submitted to the Bureau of Accounts, Treasury Department, as of June 30 of each fiscal year as soon thereafter as possible but no later than the following September 30. Two additional copies should be prepared and submitted directly to the Bureau of the Budget.

LAND, STRUCTURES, AND EQUIPMENT

5. That part of paragraph 21 of the instructions relating to the reporting of buildings, structures and facilities in process of construction is amended to add to the last sentence "and will be reported and so identified on line 36 of Form 220 rather than on lines 30 and 31."

SUPPLY OF FORMS

6. Standard Form 220 (Treasury Department Circular No. 966) will be used by reporting agencies and may be obtained through the supply facilities of the General Services Administration.

BASIS OF REPORTS

7. The monetary values reported shall be in accordance with the requirements of Department Circular No. 966 in all cases where accounts are maintained. Where accounts are not maintained such values may be determined from other records or on the basis of estimates according to the best information obtainable. When estimates are used in any line item "Est." shall be typed after the line title.

AGREEMENT WITH OTHER REPORTS

8. In all cases where similar information is being reported as of the same date to committees of Congress, other Government offices or agencies such as the Bureau of the Budget, the General Services Administration, or published in reports of the agency, care must be exercised by the reporting agency to insure agreement of the data submitted. As a specific example, the values reported for (1) land, (2) buildings, and (3) structures and facilities shall be determined in accordance with General Services Administration Circular No. 80, as supplemented, and must agree with the total of the reports rendered to that agency on an installation basis. For treatment of the costs of buildings, structures and facilities under construction not reported to the General Services Administration but included in this

report see paragraph 5 of these instructions. Those agencies reporting on public domain to the House Committee on Government Operations, should furnish a copy of each such report to the Treasury.

EFFECTIVE DATE

9. These instructions shall be effective with the reports to be submitted as of June 30, 1956.

W. T. HEFFELFINGER,
Fiscal Assistant Secretary.

TREASURY DEPARTMENT
Washington

REGULATION RELATING TO THE SUBMISSION OF BUSINESS-TYPE FINANCIAL STATEMENTS BY GOVERNMENT CORPORATIONS AND CERTAIN UNINCORPORATED AGENCIES

1956
Department Circular No. 966

Fiscal Service
Bureau of Accounts

TREASURY DEPARTMENT,
OFFICE OF THE SECRETARY,
Washington, D. C., January 30, 1956.

To Heads of Departments and Agencies and Others Concerned:

PURPOSE OF REGULATION

1. The financial statements and related information to be submitted under these regulations are required to furnish financial information for use by the Treasury Department in discharging its responsibility under the Budget and Accounting Procedures Act of 1950 for compilation of overall financial reports of the Government, and for use by the Bureau of the Budget in following through with the budgetary programs of the reporting agencies.

AUTHORITY FOR REGULATION

2. This regulation is issued pursuant to Section 114 of the Budget and Accounting Procedures Act of 1950 (31 U. S. C. 66b) which authorizes the Secretary of the Treasury to require from agencies reports and information for the effective performance of his responsibility for preparing such reports for the information of the President, the Congress, and the public as will present the results of the financial operations of the Government. As authorized by said section, the regulation provides for the furnishing of such financial data as are required by the Director of the Bureau of the Budget.

SCOPE OF REGULATION

3. This regulation requires the submission of financial statements by corporate and non-corporate Government agencies of the following character:

a. All wholly owned and mixed ownership Government corporations specifically included in the Government Corporation Control Act and amendments thereto, or subsequently brought under the provisions of that Act.

b. All other activities of the Government operating as revolving funds (accounts symbolized 4000–4999 and 8400–8499 by the Treasury Department), for which business-type public enterprise or intragovernmental fund budgets are required by the Bureau of the Budget.

c. Other activities or agencies (1) which are of a business-type nature; or (2) whose operations, services, or functions are largely self-liquidating or primarily of a revenue producing nature; or (3) whose operations result in the accumulation of substantial inventories, investments or other recoverable assets. Agencies and other activities to report under this category will be designated by the Fiscal Assistant Secretary of the Treasury.

ISSUANCE OF INSTRUCTIONS

4. Financial statements and related information under this regulation shall be prepared and submitted by the agencies concerned, in the form and the manner prescribed in the procedural instructions issued by the Fiscal Assistant Secretary of the Treasury.

WAIVERS

5. The Fiscal Assistant Secretary of the Treasury is authorized to waive the provisions of this regulation in whole or in part as to any agency or activity when it is determined that full compliance by such agency or activity is not necessary to accomplish the overall objective to obtain information required for the preparation of financial reports or for the purposes of the Bureau of the Budget.

PERIODIC REPORTS REQUIRED

6. Agencies responsible for the administration of corporate or non-corporate activities of the type specified in paragraph 3 shall furnish for each such activity periodic financial statements, as follows:

a. A *Statement of Financial Condition* showing the assets, liabilities, and investments of the United States Government in the enterprise.

b. A *Statement of Income and Expense and Changes in Accumulated Net Income (or Deficit)* showing in condensed form the earnings or losses arising from operations and changes in accumulated net income (or deficit) for the fiscal year to the end of the reporting period.

c. A *Statement of Sources and Application of Funds* showing the manner in which funds have been applied to the acquisition of assets, to expenses, and to retirement of borrowings and capital; the manner in which funds have been provided by the realization of assets, by income, by borrowings and capital contributions; and from which the net effect of such operations on the budget for the Government as a whole can be determined.

d. A *Statement of Long-range Commitments and Contingencies* containing a short description of the program and a statement showing the gross amount outstanding of loans guaranteed or insured by the reporting agency, insurance programs, obligations issued on credit of or guaranteed by the United States, long-range commitments and other contingent liabilities, and assets held as offsets to such liabilities.

ACCOUNTING SUPPORT FOR REPORTS

7. One of the principles upon which the Treasury Department is proceeding in connection with the responsibility for preparing central financial reports is that such reports should present fairly the financial condition and results of operations of the agencies as shown by their books and records. Hence, agencies shall furnish the Treasury Department with such information regarding the accounting basis for their reports submitted under this regulation, as may be required for proper evaluation of such reports.

EFFECTIVE DATE

8. This regulation, with the concurrence of the Director of the Bureau of the Budget, supersedes Budget-Treasury Regulation No. 3, dated September 1, 1944, and revised March 15, 1947, issued pursuant to Executive Order No. 8512 of August 13, 1940, as amended by Executive Order No. 9084 of March 3, 1942, and shall be effective with the period ending March 31, 1956.

W. RANDOLPH BURGESS,
Acting Secretary of the Treasury.

TREASURY DEPARTMENT
FISCAL SERVICE
Washington

INSTRUCTIONS UNDER TREASURY DEPARTMENT CIRCULAR NO. 966 Relating to the submission of business-type financial statements by Government corporations and certain unincorporated agencies

I. GENERAL

AUTHORITY FOR INSTRUCTIONS

1. These instructions are issued pursuant to Treasury Department Circular No. 966, issued under the authority contained in Section 114 of the Budget and Accounting Procedures Act of 1950 (31 U. S. C. 66b).

SCOPE OF INSTRUCTIONS

2. These instructions explain the kinds of reports and other information to be furnished to the Treasury Department under the regulation; the periods of time to which the reports shall relate; and other reporting specifications, including information concerning accounting support for the data reported.

3. All questions pertaining to the regulations or these instructions should be submitted to the Bureau of Accounts, Treasury Department.

KINDS OF REPORTS AND INFORMATION REQUIRED

4. The financial statements shall be submitted on the following standard forms:

Standard Form 220. Statement of Financial Condition
Standard Form 221. Statement of Income and Expense

Standard Form 222. Statement of Sources and Application of Funds
Standard Form 223. Statement of Long-range Commitments and Contingencies

The printed forms may be purchased through the General Services Administration. Supporting schedules to be submitted as hereinafter required should be prepared or reproduced on letter size (8 by 10½ inches) paper with appropriate title and references. Minus or "red" figures should be indicated by an asterisk (*). A duly authorized officer of the reporting agency will sign the original Standard Form 221. The copies need not be signed but should bear the name of the signing officer.

5. Where there are several regional corporations or institutions in a financial system performing identical functions, such as the twelve banks of the Federal intermediate credit bank system, consolidated statements shall be prepared and submitted for the system. Separate statements for each regional corporation or institution are not required. Where a single fund operated by an unincorporated agency covers activities made up of unlike functions, agencies may be requested to submit separate statements on a program or functional basis.

6. Each item group reported on the Statement of Financial Condition and the Statement of Long-range Commitments and Contingencies submitted for the last quarter in each fiscal year, should be described, in reasonable detail, outlining the accounting principles followed in reporting each item group on these statements unless such descriptive material is included in annual reports of the agencies submitted under paragraph 8 below. The description of the item groups should cover such subjects as (1) nature of accounts, e. g., whether on a cash, accrual, or modified accrual basis; (2) basis of reporting, e. g., whether at cost or some other value; (3) methods used in determining and reporting allowances for losses; (4) extent of departure from the account classifications provided in the regulation; and (5) extent, if any, of departure in reporting from the preceding year. The descriptive matter should be presented in the same order in which the respective item groups appear in the statements.

7. *Reporting Periods and Distribution of Statements*

Statement or Schedule	Frequency	Original to Treasury	Two copies to Budget Bureau
Forms:			
Standard Form 220	Quarterly	X	X
Standard Form 221	Quarterly	X	X
Standard Form 222	Quarterly	X	X
Standard Form 223	Semiannually	X	X
Schedules:			
1. Cash and Fund Balances	Quarterly	X	X
1a. Cash in Banks	Annually	X	
2. Investments in Public Debt Securities	Monthly	X	
3. Investments Other Than Public Debt Securities	Quarterly	X	X
4. Loans Receivable—Other Loans	Quarterly	X	X
5. Bonds, Debentures, and Notes Payable	Quarterly	X	X
Description of Items	Annually	X	X

The statements due quarterly as of the quarters ending September 30, December 31, March 31, and June 30 of each year shall be submitted on or before the 15th of the second month following those dates, except that all statements required at the fiscal year end should be submitted as soon as possible following the close of the fiscal year, but not later than the following September 30. Schedule 2—Investments in Public Debt Securities, provided for in paragraph 14f, shall be submitted each month within twenty days after the month for which it is rendered. The original of each statement and schedule shall be submitted to:

Report Preparation Branch
Division of Central Reports
Bureau of Accounts
Treasury Department

Two copies of each statement indicated above for the Bureau of the Budget shall be submitted directly to that agency at the same time the originals are sent to the Treasury.

8. Any corporation or agency required to report under this regulation, which prepares an annual financial report for publication or general distribution outside the agency, shall furnish one copy thereof to the Division of Central Reports, Bureau of Accounts, Treasury Department and two copies to the Bureau of the Budget at the time the report becomes available for distribution.

ACCOUNTING SUPPORT FOR REPORTS

9. As stated in the regulation, one of the principles upon which the Treasury Department is proceeding in connection with its responsibility for preparing central financial reports is that such reports present fairly the financial condition and results of operations of agencies, as shown by their books and records. The statements for the period ending June 30 should be in agreement with the corresponding statements submitted annually to the Bureau of the Budget for the last completed fiscal year, recognizing that the arrangement and grouping of items in accordance with the prescribed forms of this regulation may not provide a breakdown that is identical in all respects with that required for the corresponding Budget statements.

EFFECTIVE DATE

10. These procedural instructions shall be effective with the reports to be submitted for the quarter ending March 31, 1956.

II. STATEMENT OF FINANCIAL CONDITION

GENERAL

11. The *Statement of Financial Condition* (*Standard Form 220*) will show in condensed form the assets, liabilities, investment of the United States Government, and other capital of each of the reporting corporations and enterprises. The items to be reported under each classification are described below with appropriate reference to the line number on Standard Form 220. For purposes of uniformity, reporting agencies will adhere to the group classifications provided. Certain group classifications contain blank lines for reporting items to be determined and titled by the reporting agency. Supporting

detail for certain items shall be furnished in supplemental schedules as indicated. Other supplemental schedules in addition to those specified herein may on occasion be requested from selected reporting agencies.

12. *Interagency Items.*—Interagency receivables and payables representing amounts due to and from other Federal Government agencies on open accounts, notes, or similar indebtedness will be reported on the separate lines provided therefor under the appropriate asset and liability groups on the Statement of Financial Condition. Any reporting agency holding securities or a proprietory interest in the capital of another Government agency will report such holding under investments and include the same as a separate item in Schedule 3 (see paragraph 14f). Bonds, debentures, and notes payable of the reporting agency which are payable to other Government agencies shall be reflected on Schedule 5.

REPORTING OF ASSETS

13. *Cash and Fund Balances.*—Report under this group cash belonging to the reporting agency or held for the account of others, including unexpended balances of funds made available by appropriation. Balances on deposit in banks and in the Treasury should be reflected on a basis of confirmed deposits and checks issued and consistent with the basis for determining unexpended balances of appropriations and funds in the Treasury central accounts. The itemization hereunder will show:

a. *Cash in banks (line 1).*—Report on this line cash in commercial banks which is subject to withdrawal by the reporting agency for regular operations.

b. *Cash on hand and in transit (line 2).*—Report on this line cash on hand. Imprest funds and advances with agent cashiers will be included only in cases where the amount of the initial advance was made from a commercial bank account or was treated as a reduction in the fund balance available with the United States Treasury. Imprest funds, advances to agent cashiers, and all other cash on hand not related to specific appropriations or funds but treated as part of the accountability of disbursing officers shall not be included. This item will also include collections undeposited and deposits for which certificates of deposit have not been confirmed by depositaries as of the close of the period except where such amounts have been included in the accountability of disbursing officers.

c. *Fund balances with United States Treasury.*

(1) *Operating funds (line 3).*—Report on this line (a) amounts available in general, special, and revolving fund accounts including all amounts on deposit in corporation checking accounts with the Treasurer of the United States and on deposit with the Treasurer as special agent for the payment of matured principal and interest of bonds and debentures; and (b) unexpended balances of allocated working fund advances *made to* other agencies.

(2) *Trust and deposit funds (line 4).*—Report on this line balances of trust and deposit fund accounts which have been segregated as such under separate symbols in the Treasury and for which the liabilities are included on lines 46 and 47.

(3) *Allocations from other agencies (line 5).*—Report on this line unexpended balances of allocation and allocated working fund advances received *from* other agencies, regardless of the type of fund account from which advanced (consolidated reports prepared by the Treasury will eliminate this line together with the corresponding liability).

d. *Supplemental Schedule 1.*—A schedule showing the distribution by appropriation and fund account symbol of the amounts reported under "Cash and Fund Balances," by line item, will be presented in accordance with the format illustrated. In those instances where the statement covers only a single fund, the symbol of the fund may be shown in the stub for the appropriate line in lieu of submitting a separate schedule. Once each year, as of June 30, the amount of "Cash in banks" (line 1) will be itemized by bank, location, and amount in accordance with the format illustrated as Schedule 1a.

14. *Investments.*—Report under this group securities acquired and held for investment purposes. The itemization hereunder will show:

a. *Public debt securities (par value) (line 6).*—Report on this line the par value of investments in bonds, notes, bills or other public debt obligations issued by the United States.

b. *Securities of wholly owned Government enterprises (line 7).*—Report on this line investments in securities of wholly owned Government enterprises, including evidences of obligations, capital stock and paid-in surplus. Such securities shall be reported at par.

c. *Unamortized premium or discount (line 8).*—Report on this line the amount of unamortized premium (+) or discount (—) applicable to the securities reported on lines 6 and 7.

d. *Other securities (line 9).*—Report on this line all securities acquired and held for investment purposes other than those reported on lines 6 and 7 above. Such securities shall be reported at par, plus or minus unamortized premium or discount, if any.

e. *Allowance for losses (line 10).*—Report on this line the estimated losses on "Other securities" line 9.

f. *Supplemental Schedules 2 and 3.*—The supporting data for "Public debt securities (par value)" (line 6) will be prepared *monthly* as illustrated by Schedule 2 and submitted each month within 20 days after the month for which it is rendered. Data supporting "Securities of wholly owned Government enterprises" (line 7) and "Other securities" (line 9) will be prepared *quarterly* to accompany the Statement of Financial Condition. The amounts of investments shown on line 7 shall be supported in detail in Schedule 3 showing for each issue, the name of the issuing agency, the date of the issue, the interest rate, the call and maturity dates, the par and book values, and whether guaranteed or not guaranteed by the United States. Investments reported on line 9 shall be shown on Schedule 3 itemized to show securities of mixed-ownership and Government-sponsored corporations separately from securities in other general classifications.

15. *Advances to Contractors and Agents.*—Report under this group the amount of unapplied advances outstanding with contractors or agents. The itemization hereunder will show:

a. *Government agencies (line 11).*—Report on this line advances made to other Government agencies net of the unexpended balances remaining in allocated working funds advanced to such agencies. (Since an advancing agency normally debits an advance account for the full amount of advances made, a reporting adjustment will be necessary at the end of each period transferring from this account to "Operating funds" line 3, an amount equal to the unexpended balance remaining in any allocated working fund held by the receiving agency. No such adjustment is necessary where the advance is made to a revolving fund or consolidated working fund).

b. *Other (line 12).*—Report on this line the balance of advances made to private contractors and other individuals, except where such advances are included in the accountability of a disbursing officer.

16. *Accounts and Notes Receivable.*—Report under this group accounts and notes receivable. Notes receivable under this item normally should include only those short-term notes that have been accepted in liquidation of open accounts as distinguished from loans made in connection with authorized lending programs which should be reported under "Loans Receivable." The itemization hereunder will show:

a. *Government agencies (line 13).*—Report on this line receivables due from other Government agencies, exclusive of advances which are to be reported on line 11 above.

b. *Other (line 14).*—Report on this line the amount of accounts and notes receivable due from other than Government agencies, exclusive of advances which are to be reported on line 12 above.

c. *Allowance for losses (line 15).*—Report on this line the estimated losses on "Accounts and Notes Receivable—Other."

17. *Inventories.*—Report under this group inventories purchased, produced or acquired by forfeiture of loan collateral or donation. The itemization hereunder will show:

a. *Commodities for sale, finished goods, etc. (line 16).*—Report on this line commodities, completed work not yet delivered or finished goods available for sale or delivery though sometimes used by the reporting agency.

b. *Work-in-process (line 17).*—Report on this line the value of work-in-process.

c. *Materials and supplies (line 18).*—Report on this line supplies or materials to be used in the manufacture of a finished product or charged to expense when used. (Supplies normally charged to expense at time of purchase shall not be included.)

d. *Allowance for losses (line 19).*—Report on this line the estimated losses which may be realized on the disposition of the above inventories.

18. *Accrued Interest Receivable.*—Report under this group accrued interest receivable. The itemization hereunder will show:

a. *On public debt securities (line 20).*—Report on this line the amount of accrued interest receivable on direct obligations of the United States issued by the Treasury. The accrual should be computed on the same basis that the Treasury Department computes the accrued interest liability, as set forth in Treasury Department Circular No. 300, Revised, dated April 30, 1955.

b. *On securities of other agencies (line 21).*—Report on this line accrued interest on securities of other Government agencies. This item would include interest on obligations issued by other Government agencies whether guaranteed or not guaranteed by the United States.

c. *Other (line 22).*—Report on this line all accrued interest receivable not reported on lines 20 and 21.

19. Loans Receivable.—Report in this group the balance of outstanding loans receivable made, purchased or acquired by rediscount. The amounts reported hereunder will include matured and unmatured principal; extensions, and advances to borrowers. Deposits of borrowers held subject to refund or disbursement on behalf of the borrowers will be reported under the group "Trust and Deposit Liabilities." The itemization hereunder will show:

a. *Government agencies (line 23).*—Report on this line loans to Government agencies, which will usually be evidenced by notes receivable or other similar obligations.

b. *Other (line 24).*—Report on this line loans to other than Government agencies made pursuant to authorized lending programs of the agency. The amount of other loans will be supported by supplemental Schedule 4, showing the following information:

(1) *Loans to aid agriculture.*—Report under this item loans to farmers and to institutions whose primary purpose is to aid agriculture. In this classification will be included loans to agricultural credit corporations; cooperative associations; crop, livestock, and commodity loans; farm mortgage loans; and similar loans.

(2) *Loans to aid homeowners.*—Report under this item loans to homeowners and to institutions whose primary purpose is to aid homeowners. In this classification will be included mortgage loans; reconditioning loans; loans to savings and loan associations; and similar loans.

(3) *Loans to aid industry.*—Report under this item loans to industrial and commercial enterprises. In this classification will be included loans to railroads, manufacturing concerns, and public utilities; ship construction and reconditioning loans; and similar loans.

(4) *Loans to aid States, Territories, etc.*—Report under this item loans to public bodies, such as States, Territories, possessions, municipalities, and similar governmental subdivisions.

(5) *Loans to aid financial institutions.*—Report under this item loans to general financial institutions such as banks, insurance companies, loan companies, and other similar financial institutions.

(6) *Foreign loans.*—Report under this item loans to foreign governments and private entities in foreign countries.

(7) *Other loans.*—Report under this item loans which cannot be appropriately classified under any of the previous loan classifications.

c. *Allowance for losses (line 25).*—Report on this line the estimated losses on "Loans Receivable—Other" (line 24).

20. *Acquired Security and Collateral.*—Report under this item real estate and other mortgage property and pledged collateral acquired and held for sale, including real estate acquired subject to redemption. This acquired security or collateral should be reported net of prior mortgages or liens not assumed. Where the reporting agency has assumed any mortgages or liens in connection with the acquisition of security or collateral, the value of such assets will be reported gross and the mortgage or lien assumed will be reported under "Other Liabilities" (line 52 or 53).

a. *Real estate (line 26).*—Report on this line real estate, including improvements, acquired in the liquidation of loans.

b. *Other (line 27).*—Report on this line other types of security and collateral acquired in the liquidation of loans where the collateral acquired is not commingled in the accounts of the agency with similar items purchased.

c. *Allowance for losses (line 28).*—Report on this line the estimated losses on "Acquired Security and Collateral."

21. *Land, Structures, and Equipment.*—Report under this group the cost of real and personal property acquired by purchase, donation or other methods of acquisition. Residential and farm properties, and other real estate and improvements acquired through foreclosure incident to a lending operation or other Federal-aid projects will not be reported in this section but will be included on line 26. Real property shall be determined for lines 29, 30, and 31 in accordance with General Services Administration Circular No. 80, as supplemented, except that buildings, structures and facilities in process of construction shall be *included* whether or not "available for service" as of the reporting date.

Line 32 "Leasehold improvements" shall include the cost of easements, rights-of-way, and leasehold improvements to land, buildings, or structures, and facilities occupied by the Government as lessee. However, cost of Government-owned buildings, structures, and facilities located on leased land shall be included on lines 30 and 31 as appropriate.

Line 33 "Machinery and equipment" snall include the cost of machinery and processing equipment, motor vehicles, office machinery, furniture, etc.

Accumulated depreciation (line 34) should represent the amount of depreciation (including amortization of leasehold improvements) applicable to the properties listed which has been charged to costs or depreciation expense.

22. *Other Assets.*—Report under this group all other assets which cannot be properly classified under any of the previous asset groups. Real estate or instalment sales contracts, purchase money mortgages, and similar long-term paper acquired in the sale of acquired security or collateral or other owned property will be reported under this group.

a. *Deferred and undistributed charges (line 35).*—Report on this line prepaid expenses, unamortized discount on bonds or debentures issued and outstanding and other deferred charges applicable to the operations of future periods as well as debits arising from disbursements or other charges, the distribution or final disposition of which has not been made.

b. *Blank lines (lines 36 and 37).*—Report on these lines, with appropriate descriptive titles, any other assets which cannot be properly classified under any of the previous asset groups.

c. *Allowance for losses (line 38).*—Report on this line the estimated losses on "Other Assets."

REPORTING OF LIABILITIES

23. *Accounts Payable.*—Report under this group accounts payable consisting of amounts owed to creditors on open account (including voucher schedules not yet accomplished by disbursing officers). The itemization under this group will show:

a. *Government agencies (line 40).*

b. *Other (line 41).*

24. *Accrued Liabilities.*—Report under this group accrued interest and other accrued liabilities. Insofar as practicable, similar liabilities which have matured should be reported under "Accounts Payable." The itemization hereunder will show:

a. *Government agencies (line 42).*—Report on this line accrued liabilities due Government agencies including accrued interest due the Treasury.

b. *Other (line 43).*—Report on this line all other accrued liabilities, including interest on obligations issued to the public.

25. *Advances from.*—Report under this group the amount of unapplied advance payments received for goods or services to be furnished by the reporting agency. The itemization hereunder will show:

a. *Government agencies (line 44).*—Report on this line the amount due Government agencies for advance payments received, including any unliquidated liability for goods and services in connection with an advance of funds under section 601 of the Economy Act or similar legislation (regardless of the type of fund from which advanced).

b. *Other (line 45).*—Report on this line all other liabilities arising from advance payments for goods and services.

26. *Trust and Deposit Liabilities.*—Report under this group the liabilities for amounts held in trust or on deposit (including the unexpended balances of trust fund appropriations) covering such items as cash collateral, proceeds of loans held for the borrowers, time and demand deposits, withholding tax and United States savings bond deductions, undeposited general fund receipts, and other deposits held subject to refund or application. The itemization hereunder will show:

a. *Government agencies (line 46).*—Report on this line the trust and deposit liabilities due Government agencies, including such items as withheld Federal taxes and undeposited general fund receipts.

b. *Other (line 47).*—Report on this line all other trust and deposit liabilities not recorded under line 46.

27. *Bonds, Debentures, and Notes Payable.*—Report under this group the par value of all outstanding bonds, debentures, notes, and other obligations of a similar character held by the public or other Government agencies (other than the Treasury). The itemization hereunder will show:

a. *Government agencies (line 48).*—Report on this line bonds, debentures, notes, etc., issued to other wholly owned Government

corporations and agencies (other than the Treasury). Borrowings from the Treasury are to be reported under "United States Interest."

b. *Other (line 49).*—Report on this line bonds, debentures, notes, etc., issued to other than wholly owned Government corporations and agencies. All marketable obligations shall be reported here even though a portion may have been acquired by another Government agency.

c. *Supplemental Schedule 5.*—Information on the balances reported on these lines will be submitted as illustrated on supplemental Schedule 5 "Bonds, Debentures, and Notes Payable" showing the character, date of issue, the interest rate, the call and maturity dates, the par value of each issue outstanding and whether guaranteed by the United States. The fact that another Government agency may own marketable obligations issued to the public by the reporting agency need not be reported.

28. *Other Liabilities.*—Report under this group deferred and undistributed credits and on the blank lines provided, with appropriate descriptive titles, all liabilities which cannot be properly classified under any of the other liability groups.

a. *Deferred and undistributed credits (line 50).*—Report on this line deferred income, unamortized premium on bonds or debentures issued and outstanding and other credits applicable to operations of future periods as well as items arising from receipts or other credits, the distribution or final disposition of which has not been made.

b. *Accrued annual leave (line 51).*—Report on this line the amount of unpaid annual leave which has been charged to cost.

c. *Blank lines (lines 52 and 53).*—Items relating to loans receivable discounted with recourse, and guaranteed loans or other agreements of a guaranteed nature which are subject to redemption by the reporting agency at the option of the holder should be reported here. Any other liabilities which cannot be classified under any other liability group shall be reported here with appropriate descriptive title.

29. *Reserves.*—Report on blank lines 54 and 55 operating reserves established for deferred maintenance, liability reserves, reserves established for the benefit of equity holders and other similar special reservations of earnings not classified as part of the "Accumulated net income or deficit" of the enterprise.

REPORTING OF NET INVESTMENT—PRIVATE INTEREST

30. *Private Interest.*—Report under this group the amount of capital provided from non-governmental sources and the accumulated income or deficit applicable thereto. The par value of the capital stock held by the public will be reported on line 57, and the accumulated net income or deficit, segregated as between reserved and unreserved, on lines 58 and 59.

REPORTING OF NET INVESTMENT—UNITED STATES INTEREST

31. *Interest-Bearing Investment.*—Report under this group capital stock, paid-in capital, paid-in surplus, advances from revolving funds, bonds, notes, or other capital items provided directly by the United

States Treasury or through other Government agencies where interest is payable, without regard to earnings, to the Treasury or other Government agencies on such capital investment items. The itemization hereunder will show:

a. *Capital stock* (*line 60*).

b. *Borrowings from Treasury* (*line 61*).—Report on this line borrowings from Treasury represented by notes, bonds, or any other means of borrowing. The amount of unused borrowing authority remaining available shall be reported as a footnote.

c. *Blank line* (*line 62*).—Report on this blank line, with appropriate title, any additional items necessary to reflect the proper total interest-bearing investment of the United States Government, including advances from revolving funds, paid-in capital, paid-in surplus, etc. The title "Paid-in capital" or "Paid-in surplus" shall be used only for those items of Government investment specifically identified as such in the legislation authorizing the capitalization. Where a portion of the capital made available by Congress for an item reported on this line is retained by the Treasury in a separate revolving fund or other holding account, the gross amount remaining available shall be reported as a footnote.

32. *Non-interest-bearing investment.*—Report under this group capital stock, paid-in capital, paid-in surplus, advances from revolving funds, bonds, notes, appropriations, or other capital items, which are non-interest bearing, provided directly by the United States Treasury or through other Government agencies, including the capitalization of assets. The itemization hereunder will show:

a. *Capital stock* (*line 63*).

b. *Borrowings from Treasury* (*line 64*).—Report on this line borrowings from Treasury represented by notes, bonds, or any other means of borrowing. The amount of unused borrowing authority enacted by the Congress shall be reported as a footnote.

c. *Appropriations.*—Report under this group the cumulative amounts made available through congressional appropriations to finance the activity being reported upon, net of appropriation balances rescinded, transferred to "Payment of Certified Claims" or otherwise returned to the Treasury. Agencies operating from other than revolving funds will show on blank lines 65 and 66 a segregation of appropriations as between the amounts expended and unexpended. Revolving fund enterprises may use blank line 66 for reporting the amount of appropriated funds repaid to the Treasury as a capital transfer in those instances where such presentation is required.

d. *Capitalization of assets* (*line 67*).—Report on this line the net amount derived through recognition of the capitalized value of property, inventory, and other assets on hand at the inception of the fund, donated to the reporting agency or charged to appropriations other than those included in amounts reported on line 65 or 66 above.

e. *Blank lines* (*lines 68 through 70*).—Report on these lines with appropriate titles any other segregation of the investment of the Government which by statute or otherwise is required for full disclosure, including advances from revolving funds, paid-in capital, paid-in surplus, etc. The titles "Paid-in capital" or

TD 045-DC

Standard Form 220

"Paid-in surplus" shall be used only for those items of Government investment specifically identified as such in the legislation authorizing the capitalization. Where a portion of the capital made available by Congress for an item reported on this line is retained by the Treasury in a separate revolving fund or other holding account, the amount so retained shall be reported as a footnote.

33. *Accumulated Net Income or Deficit.*—Report under this group the accumulated earnings or losses applicable to the "United States Interest," segregated as between reserved earnings as required by statute or otherwise and unreserved earnings or deficit. The itemization hereunder will show:

a. Non-revenue producing operations (*Line 71*).—Report on this line as a deficit (*) item the cumulative net expenses incurred for any programs set up by law to be non-revenue producing and not associated or identified with the regular revenue producing services provided by the agency.

b. *Reserved* (*Line 72*).—Report on this line the reserves which are established by statute or otherwise from annual earnings. Normally direct charges should not be made to such reserves for losses incurred; such losses should be reflected in the income and expense statement.

c. *Unreserved* (*line 73*).—Report on this line the cumulative deficit or unreserved surplus resulting from operations.

34. *Deposit of General and Special Fund Revenues* (*line 74*).—Those enterprises which are not permitted to reuse or hold their receipts but are required to deposit their collections into the Treasury as miscellaneous receipts shall report the cumulative amount of such deposits on this line as a deduction from the investment of United States Interest. This will apply only to enterprises that are financed by other than revolving funds.

Personalty Inventory of the Architect of the Capitol, as of June 30, 1956

Properties, under the jurisdiction of the Architect of the Capitol, are located in the United States Capitol Building, Senate Office Building, House Office Buildings, and Grounds; Capitol Power Plant and Grounds; Library Buildings and Grounds; United States Supreme Court Building and Grounds; and United States Botanic Garden and Nursery.

Office furniture, furnishings, and equipment	$750, 851
Mechanical equipment	441, 479
Supplies and materials (including plant material at Botanic Garden and Nursery)	1, 275, 988
Works of art	1, 400, 000
Total personal property	3, 868, 318

Personalty Inventory (Under the Jurisdiction) of the Sergeant at Arms of the United States Senate as of June 30, 1956

Cash held by disbursing officer	$249,000.00
Office supplies and equipment, furniture and carpets	381,508.24
Mechanical equipment	[1] 1,326,724.48
Total personal property	[2] 1,957,232.72

[1] Mechanical equipment figures were not included in the June 30, 1955, inventory report.
[2] These figures represent acquisition cost, actual or estimated.

Personalty Inventory of the Office of the Clerk of the House of Representatives

As of June 30, 1956

Cash held by disbursing officer	$111, 251. 23
Furniture and carpeting	1, 747, 737. 11
Supplies and material (for construction and repair of furniture, drapes, venetian blinds, rugs, etc.)	61, 320. 74
Machinery, tools, and accessories (for repair shops)	11, 393. 33
Cleaning and other supplies (for Committees and offices in the Capitol)	4, 845. 89
Manual typewriters	252, 380. 08
Electrical and mechanical equipment	1, 023, 284. 98
Stationery room stock	82, 400. 22
Joint Senate and House Recording Facility:	
(*a*) Equipment	179, 287. 07
(*b*) Materials and supplies	33, 325. 46
Miscellaneous machinery, various machines, and automotive equipment	122, 610. 62
Total personal property	3, 629, 836. 73

Personalty Inventory of the Library of Congress
As of June 30, 1956

Cash held by disbursing officer	$77,614.99
Equipment, supplies, furniture, miscellaneous	2,295,991,943.00
Total personal property	2,296,069,557.99

Report of assets as of June 30, 1956

1. The Library of Congress collections		$2,196,830,000
2. The card catalogs		96,500,000
3. Supplies and materials (exclusive of maintenance and engineering supplies to be reported by the Architect of the Capitol)		31,993
4. Furniture, equipment, typewriters, and office machines (exclusive of shop equipment to be reported by the Architect of the Capitol):		
Furniture and equipment	$1,540,777	
Typewriters and office machines	264,128

Total	111, 349, 200, 000

REAL AND PERSONAL PROPERTY OF THE DEPARTMENT OF DEFENSE

AS OF 30 JUNE 1956

Summary

This report on the real and personal property of the Department of Defense as of June 30, 1956, has been prepared at the request of the Committee on Government Operations of the House of Representatives. It is generally similar in scope and content to the June 30, 1955, report prepared for that committee and to the calendar year end inventory reports developed to meet the requirements of section 410 of the National Security Act of 1947, as amended.

The Department of Defense has a greater investment in real and personal property than all other agencies of the United States Government combined. As this report shows, the Department of Defense has inventories of real and personal property for military use carried on its books at a total of $134.1 billion. This includes approximately 3.4 million different kinds of items of materiel. In addition, it has inventories of real and personal property totaling $3.6 billion for civil functions of the Corps of Engineers.

At the request of the committee, all defense inventory summaries, real and personal, are shown by their location: United States, Territories and possessions and "overseas" (foreign countries). Where command reporting channels within the Military Departments do not provide precise, detailed geographic segregation in their summary inventory reports, estimates have been supplied to make the required breakdown. Also, at the committee's request, real property of the Department of Defense is reported to the General Services Administration so that, for committee use, it might be combined by GSA with real property inventories of all Government civilian agencies. As requested by the committee, only data which are unclassified under current security policies and regulations are included in this report.

While the report includes, as supplementary information, data on properties and equipment of the National Industrial Plant and Equipment Reserve, the cost of this reserve is not included in the tota costs for inventories owned or controlled by the Department of Defense since this reserve is under the custody of the General Services Administration. Also excluded are supplies and equipment in overseas field Army depots and minor items of equipment issued for use to Army units. This report has broader coverage than the report of June 30, 1955, and includes all Air Force warehouse inventories at bases and depots worldwide.

A discussion of the problem of valuing real property in both the United States and foreign countries is presented in section A, part I, "Real Property." For the purposes of this report, land (other than public domain) and buildings and most long life heavy equipment such as ships, are priced at acquisition cost and it should be noted

that such costs usually differ from current replacement values. However, at the specific request of the committee, an estimate of the present-day value of public domain land controlled by the Department of Defense has been made. This estimated present-day value (which is not included in the $134.1 billion book value total of the Department of Defense) totals $190.9 million—$180.8 million for military functions and $10.1 million for civil functions. Other inventories, presented in part II of this report, are generally priced at standard prices representing replacement cost or estimated purchase price. Much of the currently unserviceable part of the inventory of the Army was carried on its books on June 30, 1956, at 50 percent of the standard price of the items.

The worldwide distribution and movement of the huge inventories of the Department of Defense make difficult the task of accounting for them with complete accuracy. Continuing progress, however, has been made in the past fiscal year in each of the military departments in accurately reporting their inventories.

Supply management during the past fiscal year benefited from progress of the Federal cataloging program, and the assignment of Federal catalog stock numbers to items previously identified only by the manufacturers' part numbers. This produced a substantial reduction in the number of different items in the supply system and in the volume of records which must be maintained.

A promising development, which is expected to have a significant effect on improvement of inventory records and the management of logistics, is the increasing use of automatic data processing equipment. By providing better records and accelerated reports, it is anticipated that this equipment will result in more accurate requirements determination, more responsive procurement, better balanced inventories and faster supply actions.

Part III of this report presents a summary of progress made through June 30, 1956, in developing and improving the quantitative and monetary records, extension of stock fund inventories, and inventory reports of the Department of Defense. These measures and others being developed will result in more complete and accurate data for future inventory reports to the Congress and will facilitate improved inventory management in the Department of Defense.

Consolidated summary tables and charts showing the geographical distribution and the types of properties held by each of the military departments follow.

TABLE 1.—*Worldwide distribution of inventories, Department of Defense, as of June 30, 1956*

[Millions of dollars]

Military department and type of property	Total	Continental United States	Territories and possessions	Foreign countries and afloat	In transit

DOD REAL AND PERSONAL PROPERTIES BY MAJOR TYPE AND SERVICE

AS OF 30 JUNE 1956

a/ Includes about $1 million of Air Force Industrial Fund Inventories

PART I. INVENTORY OF REAL PROPERTY

SECTION A. DEPARTMENT OF DEFENSE SUMMARY

1. *General*

This section of the report is a summary and brief analysis of the inventory of military real property as of June 30, 1956. Since the Committee on Government Operations has instructed the General Services Administration to report to it on Department of Defense realty inventories located in the United States as well as on realty inventories of civilian Government agencies, there will not be an extensive treatment of military real property in the continental United States.

The real property under the control of the Military Departments is one of the most important assets of the Department of Defense. In order to achieve maximum defense at minimum cost, this real property must be administered in accordance with modern real property management principles. The real property inventory, made twice a year by the Department of Defense, provides the information required to achieve sound management objectives.

2. *Cost of property controlled*

The total cost to the United States Government of real property controlled by the three Military Departments as of June 30, 1956, was $22.9 billion, 7.5 percent more than the $21.3 billion reported a year earlier. This total includes $18.2 billion in the continental United States, $2.5 billion in our Territories and possessions, and $2.2 billion in foreign countries friendly to the United States.

TABLE 3.—*Cost of military real property controlled, Department of Defense, as of June 30, 1956*

[Thousands of dollars]

Area	Department of Defense	Army	Navy (including Marine Corps	Air Force
Total	22,918,730	7,949,983	7,887,704	7,081,043
Continental United States [1]	18,248,505	6,879,024	6,530,395	4,839,086
Territories and possessions [2]	2,469,343	584,528	1,096,196	788,619
Foreign countries	2,200,882	486,431	261,113	1,453,338

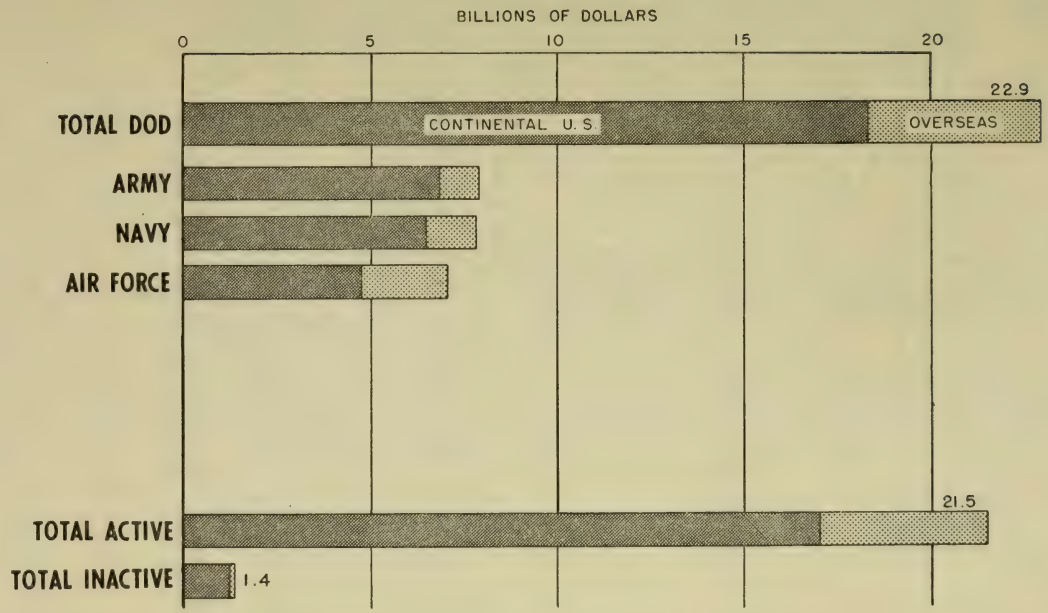

[1] Excludes real property in the amount of $3,391 million under the jurisdiction of the Civil Works Division, Office, Chief of Engineers, Department of the Army.

[2] Excludes real property in the amount of $7 million under the jurisdiction of the Civil Works Division, Office, Chief of Engineers, Department of the Army.

CHART 3

COST OF MILITARY REAL PROPERTY CONTROLLED

AS OF 30 JUNE 1956

85132—56——5

"Controlled," as used throughout this report, has reference to the right of directing the use of property. In connection with buildings, structures, or land, it includes: (1) Owned (acquired through purchase, condemnation, donation, transfer); (2) Leased; (3) Public Domain (withdrawn permanently or temporarily by Military Departments); (4) Temporary use (acquired through license or permit, temporary public land order, temporary executive or territorial order); (5) Easements (utility, clearance, etc.); and (6) Foreign rights (base rights agreements, reciprocal aid, requisitioned, etc.).

The $22.9 billion total does not indicate present market value. Some of the land owned by the Army and by other military departments was donated, such as Governor's Island, which was donated by the State of New York to the Army. Some of it is a withdrawal from the Public Domain. There is no cost for public domain lands and in many instances no costs, or only nominal costs, for donated lands. Land and buildings in some cases were acquired a century or more ago when land prices and building costs were only a small fraction of today's prices and costs. Cost data, in some instances, include estimates from old records, and there is no assurance that such data are precisely accurate in representing the original cost.

On the other hand, no allowance for loss of value as a result of depreciation is reflected. However, because the data represent an inventory as of a given date, they do not include costs of structures which were demolished or replaced prior to that date. As additional construction or acquisition is accomplished, it is written into the inventory at the cost to Government. The original cost figure is of significance as an historical measure of the military real property holdings of the Department of Defense, and in the absence of current appraised valuations (which would be costly and of doubtful utility), is the only monetary measure of the Federal proprietary interest.

The cost to the Government data do not include amount of rentals paid nor the appraised value of the property under lease. These data do include, however, costs of any improvements made and owned by the Government on the leased properties.

At the request of the House Committee on Government Operations, an estimate has been made of the current value of the public domain land controlled by the Department of Defense. These estimates are shown in table 4. This estimated value is not included in the $134.1 billion book value total of the real and personal property for military use of the $3.6 billion total for civil functions.

TABLE 4.—*Acreage and estimated current value of public domain lands, controlled by the Department of Defense, as of June 30, 1956*

[Thousands of dollars]

[1] Less than $500.

3. Real property in foreign countries

The $2.2 billion investment in real property in friendly foreign countries represents the cost of that real property to the United States. It consists of troop and family housing, storage facilities, airfields, maintenance facilities, hospitals, and various other kinds of real property required by our Armed Forces overseas.

International agreements which make it possible to station our Armed Forces in friendly countries provide the basis for their occupancy of real property in those countries and United States investments in such real property. In recent years, negotiation of such agreements has provided some recognition of the residual value of United States facilities constructed with appropriate funds. Occupancy, in effect, is on a term basis varying from month-to-month (revocable at the sole discretion of the host government) to a firm term of 99 years. Areas occupied vary from simple privately owned leased space to large holdings of host governments.

In occupied territories, occupancies have been effected through the use of requisitions. These programs are financed by the governments of the occupied countries with their own currency, such as the deutschemark financed properties improved or constructed in West Germany. (Notwithstanding the recently acquired sovereignty of West Germany, these arrangements are still in effect as an interim agreement.) This report includes only the cost, if any, to the United States of properties in occupied territories.

During the past 2 years, a number of properties in Japan, Korea and West Germany have been released by the Department of Defense

to the governments of these countries. The evacuation of Austria since June 30, 1955 by our occupying forces has resulted in releasing to the Austrian Government the properties these forces had required.

In certain countries, title to improvements constructed by the Department of Defense is vested in the United States until termination of agreements by which occupancy was established. Upon expiration of such an agreement, disposition of the property is accomplished in accordance with the terms of the agreement. (Title may pass automatically to the host country or the property may be removed or sold by the United States or its ultimate disposition may be left open for further negotiations.) In other instances, residual value clauses provide that, upon termination of agreements, the host government agrees to pay the residual value of the improvements constructed by the Department of Defense in such amounts as may be jointly agreed upon by the host government and the United States.

These facts emphasize the desirability of awareness that our real property in foreign countries is carried on the books of the Department of Defense and in this report at its cost to the United States. The physical facility represented by an investment in a foreign country may be identical with a facility within the United States owned by our Government but it represents a very different type of an investment. It is an investment arising from the world situation at the time it was made and the resulting national commitments of the United States.

The report does not include any investment by the United States for infrastructure (the NATO common infrastructure program), which is a term used to identify the fixed military facilities needed to support effective combat operations by the integrated NATO forces. Construction costs for infrastructure facilities are shared by all NATO nations. Actual construction is the responsibility of the nation in whose territory a project is located.

4. Acreage controlled

The Department of Defense through the three military departments controlled a total of 33.6 million acres of land throughout the world on June 30, 1956. This total includes land owned, leased, and used on temporary permit, easements, and foreign rights of different types. A distribution of this acreage by area and by military department is shown in table 5.

TABLE 5.—*Acreage of military real property controlled, Department of Defense, as of June 30, 1956*

Area	Department of Defense	Army	Navy (including Marine Corps)	Air Force
Total	33,598,639	10,606,524	4,913,329	18,078,786
Continental United States [1]	27,081,449	8,763,733	4,353,725	13,963,991
Territories and possessions [2]	3,892,767	1,113,766	232,212	2,546,789
Foreign countries	2,624,423	729,025	327,392	1,568,006

[1] Excludes 4,178,393 acres under the jurisdiction of the Civil Works Division, Office, Chief of Engineers, Department of the Army.
[2] Excludes 513 acres under the jurisdiction of the Civil Works Division, Office, Chief of Engineers, Department of the Army.

5. *Categories of real property*

The cost of the 10 largest categories of real property, worldwide, of the Department of Defense is shown in table 6. Troop housing, airfield pavements, and covered storage are the three categories representing the largest investments.

TABLE 6.—*Cost and area of 10 largest categories of real property, Department of Defense, worldwide, as of June 30, 1956*

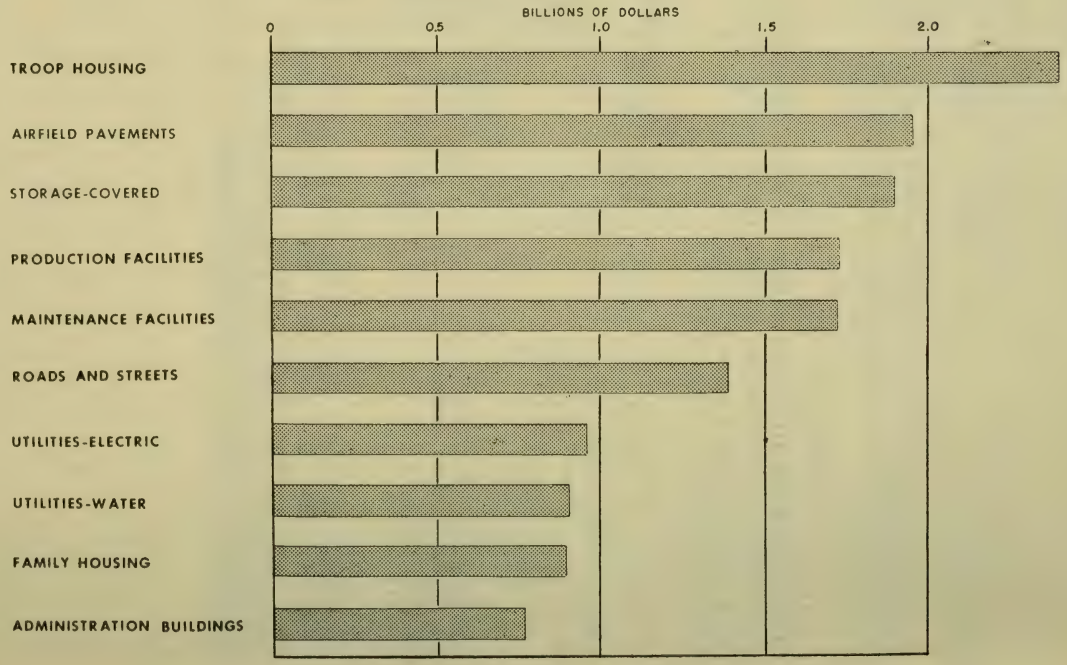

Categories	Cost to U. S. Government (thousands)	Area (in thousands of square feet)[1]
Troop housing (excluding emergency)	$2,413,546	542,802
Airfield pavements	1,958,032	414,953
Storage, covered (depot and installation)[2]	1,904,454	607,067
Production facilities	1,729,142	174,512
Maintenance facilities	1,725,551	257,267
Roads and streets	1,397,503	656,600
Utilities:		
Electric [3]	968,271	7,671
Water [3]	917,799	12,880
Family housing [4]	900,988	278,441
Administration buildings	771,823	162,530

[1] Airfield pavements and roads and streets are in square yards.
[2] Excludes liquid fuel, ammunition, and cold storage.
[3] Includes both the operating buildings and the distribution lines.
[4] Dwellings only.

CHART 4

COST OF THE TEN LARGEST CATEGORIES OF DOD REAL PROPERTY WORLD-WIDE

AS OF 30 JUNE 1956

SECTION B. DEPARTMENT OF THE ARMY, OVERSEAS INSTALLATIONS

1. Cost of properties

Army real properties outside the continental United States cost slightly more than $1 billion ($1,071 million), a slight increase over the $1,050 million reported a year ago. The actual value of properties used by the Army is considerably higher, since on leased properties only the cost of the improvements paid for by the United States Government is included in the cost figures. Of these properties ($585 million), 55 percent are located in our Territories and possessions and the remainder ($486 million) in foreign countries (table 3). The reduction of $43 million during the year in total properties in foreign countries was accounted for by withdrawal of forces from Austria and changes in properties in Germany.

Of the properties in the Territories and possessions, 94.6 percent is in active installations; of those in foreign countries, 99.2 percent is in active installations.

2. Acreage

A large block of land under permit and public domain land is being used by the Army in Alaska. Additional acreages in other countries bring the total acreage controlled in all Territories and possessions to 1.1 million. A large part of the 16 percent increase over that reported a year ago is due to acreages acquired for temporary use for maneuver purposes. In foreign countries, various base rights are exercised by the Army on 729,000 acres.

3. Categories

As should be expected, troop housing makes up by cost the largest single type of property in overseas areas. The 10 largest categories of real property, with cost to the Government totaling $405 million in Territories and possessions and $369 million in foreign countries, constitute 69 and 76 percent of the respective total amounts.

SECTION C. DEPARTMENT OF THE NAVY—OVERSEAS INSTALLATIONS

1. Cost

One-sixth ($1.35 billion) of the Navy real properties, on a cost basis, are located outside of the continental United States. Of these properties, $1.1 billion were in Territories and possessions and $261 million were in foreign countries as of June 30, 1956 (table 3). In the Territories and possessions, 92.7 percent of these properties was in active installations, and 99.8 percent in foreign countries was in active installations, on a cost basis.

2. Acreage

The Navy controlled 560,000 acres overseas on June 30, 1956, of which 232,000 were in Territories and possessions and 328,000 were primarily base rights in other countries.

3. Categories

The 10 largest categories of Navy real property represent a cost to the United States Government of $723 million in Territories and possessions and $173 million in foreign countries. These amounts are two-thirds of the respective totals.

SECTION D. DEPARTMENT OF THE AIR FORCE—OVERSEAS INSTALLATIONS

1. Cost

Properties in overseas areas controlled by the Air Force represent a cost to the Government of $2.2 billion, 32 percent of the Air Force total.

Of the Air Force overseas properties, 35 percent, on a cost basis, is in United States Territories and possessions and 65 percent in 23 other countries.

2. Acreage

Total acres controlled by the Air Force in Territories and possessions amounted to 2,547,000 as of June 30, 1956, and for foreign countries, 1,568,000 acres. The 1.6 million acres on which foreign base rights are held by the Air Force are located in 29 countries. The Air Force is using large tracts of land in Alaska, most of which have been withdrawn from public-domain lands.

3. Categories

The largest single category cost in all oversea areas is that of airfield pavements followed by troop housing. The 10 largest categories accounted for $639 million in Territories and possessions and $1,154 million in foreign countries, 81 and 80 percent of the respective amounts.

PART II. INVENTORY OF PERSONAL PROPERTY

SECTION A. INVENTORY OF MILITARY EQUIPMENT AND SUPPLIES IN THE CONSOLIDATED SUPPLY SYSTEMS AND IN STOCK FUNDS

1. General

Section A deals with the inventories in the supply systems of each of the military services. For each of the four services, dollar data are presented in terms of the major purposes for which the supplies and equipment are held, i. e., peacetime operating stock, mobilization reserve stock, economic retention stock, contingency retention stock, excess stock and also in terms of broad commodity categories.

Inventories are accounted for in the supply systems of the military services from the time of acceptance by the service at the manufacturer's plant or at the military depot until they have been issued to a using unit. The supply system inventories are those being held in the storage or warehousing facilities of the Department for issue to the consumer. They constitute that segment of the overall materiel supply system which is defined in the JCS dictionary as the "phase of military supply which extends from receipt of finished supplies by the military services through issue for use or consumption."

The stocks are physically located at depots, posts, camps, stations, and bases in the United States, Territories, or possessions, and in foreign countries. They are stored in warehouses, open storage spaces, ammunition dumps, and fuel tanks.

Supply items which have been issued to the ultimate consuming military units—such as divisions, air wings, and most ships—are not considered as assets of the supply system. These items are in the hands of the ultimate user and as such are carried in the individual unit in-

ventories where they remain until consumed, destroyed, captured, lost, or otherwise disposed of. Data are presented in part II, section B, of this report on inventories which have been issued from the supply system to the ultimate users. If such an item in a military unit becomes unserviceable, it is normally replaced by a serviceable item from the supply system. The unserviceable item is returned to the supply system, where it may be repaired and put back into supply channels or declared excess and disposed of.

Stock funds.—The Department of the Navy has pioneered in the operation of stock funds having had such a fund for more than 60 years. Though Army, Air Force, and Marine Corps initiated their stock fund operations much later, the Army particularly has continued to expand these activities.

Stock funds do not constitute a separate supply system. They are operational and financial devices employed by the military services principally to facilitate financial control over consumption-type supply items for which there is recurring demand. The stock fund mechanism permits the military services to handle inventories of such continuous-demand items on a replacement basis much as private distributors replace stocks depleted by sales with new stocks purchased with the proceeds from such sales. Because of the widespread interest in stock fund operations as a means of improving supply and fiscal management and control of inventories, data representing stock fund inventories for each service are shown separately in this section. These stock fund inventories are included in the overall totals for the entire supply system of each military service.

Reporting of categories and inventory accounts.—Data representing the dollar value of inventories in the aggregate supply system,both the items which are financed by stock funds and those financed from appropriated funds, are shown for each of the military services in the tables in this section.

Each of these tables shows the dollar amount of inventories in each major commodity category (groupings of similar kinds of supplies and equipment) and in each inventory account (groupings according to the purpose for which the supplies are retained). Though the job is not yet complete, considerable progress continues to be made by the military services in categorizing and classifying equipment and supplies for accounting and managerial purposes.

The inventory accounts now in use by the military services to identify the purpose of retention are not entirely uniform, but these are now being standardized. As they lack uniformity, no single set of definitions can be presented. A current project will provide uniform materiel categories based on Federal supply classes. The terminology and definitions currently employed by each military service are presented with the supply data for that service.

2. Department of Defense summary

The remainder of this section of this report presents detailed dollar-inventory summaries, showing categories and inventory accounts for each of the military services. A summary of the aggregate totals in the Department of Defense supply system is shown in table 7.

TABLE 7.—*Supply system inventories, Department of Defense, as of June 30, 1956*

[Millions of dollars]

	Total	Stock fund inventories	Appropriated fund inventories
Department of Defense:	50,974	9,772	41,202
Army	19,855	7,114	12,741
Navy	[1] 15,297	1,478	[1] 13,819
Marine Corps	1,844	406	1,438
Air Force	13,978	774	13,204

[1] Includes $774 million aircraft spare engines and $174 million of shipboard supplies not included in Navy supply system inventory data.

Table 7 shows that Army holds the largest part of the total Department of Defense supply system inventories, 39.0 percent. Navy and Marine Corps together account for 33.6 percent, and Air Force for 27.4 percent. Of the total Department of Defense stock fund inventories, Army has 72.9 percent; Navy and Marine Corps have 19.2 percent; and Air Force has 7.9 percent. Of the supply system appropriated funds inventories, 30.8 percent belong to the Army; 37.1 percent Navy and Marine Corps; and 32.1 percent Air Force. These data are also presented graphically in chart 5.

3. Army supply system inventories

As one of the techniques in improving inventory control, Army continues to reduce the total number of different items in its supply system. For the first time in many years that total number has been cut to less than 1 million, being about 913,000 at June 30, 1956. These are grouped in 15 commodity categories for presentation in this report. The seven inventory accounts for stocks reported by the Army are: (1) Peacetime Operating, (2) Mobilization Reserve, (3) Economic Retention, (4) Contingency Retention, (5) Claimant, (6) Disposable Excess, and (7) Unserviceable. In addition, the Army reports stocks in transit. These seven Army inventory accounts have the following definitions:

(1) Peacetime Operating Stocks are serviceable stocks in depots and posts, camps, and stations held for issue to using units to equip and train the planned peacetime United States Forces.

(2) Mobilization Reserve Stocks are serviceable stocks held for the account of that portion of the Mobilization Reserve Materiel Requirement for which procurement is authorized. They include the prepositioned stocks held in specific locations in condition for immediate shipment or use.

(3) Economic Retention Stocks are serviceable stocks in long supply which are to be retained to meet future requirements where economic considerations justify such retention.

(4) Contingency Retention Stocks are serviceable stocks in long supply for which there is no programed requirement but which should be retained for military or defense contingencies. Only military-type items may be placed in the contingency retention category.

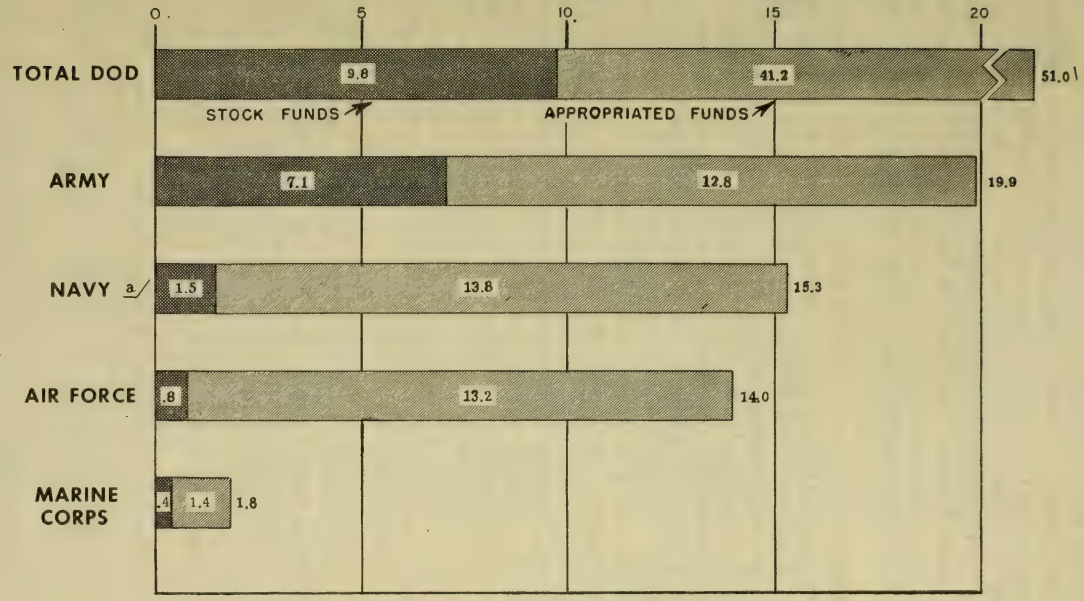

(5) Claimant Stocks are serviceable stocks on hand which the Army is holding for the Navy, Air Force, and other agencies (such as Atomic Energy Commission). Stocks held for the National Guard and other

CHART 5

DOD SUPPLY SYSTEM INVENTORIES BY SERVICE

AS OF 30 JUNE 1956

BILLIONS OF DOLLARS

a/ Includes $948 million of Aircraft Spare Engines and Shipboard Supplies not included in chart of Navy Supply System Inventories

Army Reserve components are not carried in this claimant classification but are combined with those of the active Army.

(6) Disposable Excess Stocks are stocks classified as excess to the needs of the reporting command military department and those previously declared as surplus but for which disposal has not yet been accomplished.

(7) Unserviceable Stocks are (*a*) stocks in continental United States depots and oversea commands, presently unserviceable but scheduled for repair and return to stock or issue during the current fiscal year; (*b*) stocks in posts, camps, and stations within the continental United States which are to be repaired by the command and reissued; and (*c*) all other unserviceable stocks. Most of the unserviceable stocks are carried at a value of 50 percent of their standard price.

In Transit Stocks are those to which title has passed to the Army, which are en route (*a*) from manufactures or suppliers, but which have not been received physically by the Army; (*b*) from CONUS depots to oversea commands or vice versa; (*c*) from CONUS depots to CONUS commands; and (*d*) among CONUS depots which have not been reported as received by the consignee depots.

The data in the summary table (table 2) representing Army inventories covers all depot inventories (except those in Korea, and with the Seventh Army in Germany) and about 85 percent of all station stock inventories. Okinawa stocks were incorporated into the financial inventory accounting system in January 1956 and present Army plans call for Korean stocks to be brought into the system beginning July 1, 1956. The depot stocks of the Seventh Army are maintained exclusively for the close support of tactical units and are considered by the Army to be more nearly comparable to supplies in the hands of troops than they are to supply system inventories. The Army is not presently planning to bring Seventh Army stocks into the financial inventory accounting system.

A brief analysis of the Army supply system data in table 8 shows that approximately 67 percent of the total is represented by Ordnance Corps supplies and equipment. Over 33 percent of Army's overall total is in the single category of ammunition, guided missiles, rockets and associated equipment. This category total represents an increase of only 1.7 percent over the comparable June 30, 1955, total. Other large categories, all with inventories of over a billion are (1) ordnance spare parts, tools, equipment and supplies, (2) ordnance vehicles, (3) quartermaster clothing, (4) ordnance weapons, (5) Signal Corps item, and (6) Engineer Corps stocks. The June 30, 1956, inventory for each of these major Army categories, except for the "ammunition, guided missile" group, represents a decrease from the year earlier inventory.

Army's total supply-system inventories decreased 6 percent between June 1955 and June 1956. Accounting for this reduction were some rather significant shifts. These were reductions in the economic-retention, the claimant, and the unserviceable-inventory classifications which were partially offset by increases in the peacetime-operating and the contingency-retention and disposable-excess segments.

As of June 30, 1956, 19.9 percent of the distributed portion of Army's supply-system inventories were classified as peacetime operating, 28.8 percent mobilization reserve; 21.2 percent was in the economic and contingency retention; 12.5 percent, excess; 9.2 percent, unserv-

[1] Stocks held against that portion of the mobilization reserve materiel requirement for which procurement is authorized.

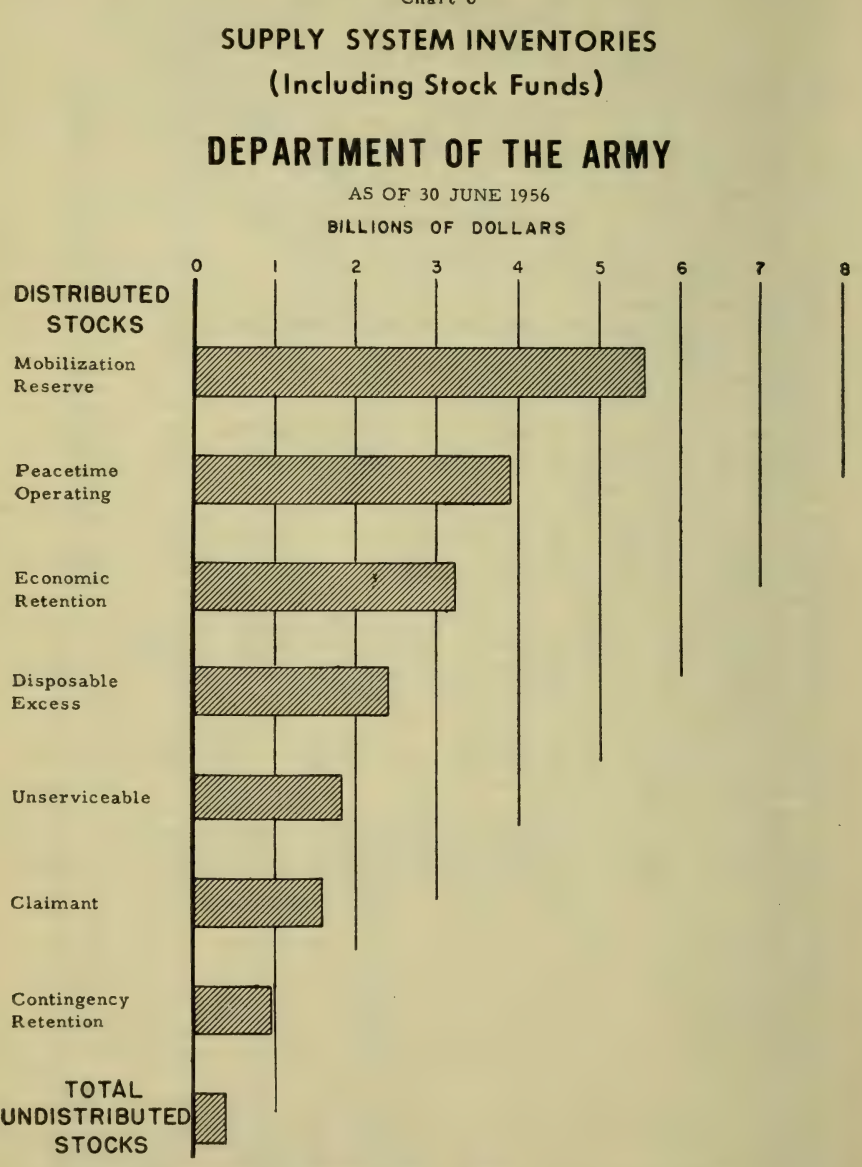

[2] Stocks excess to 1 command but not necessarily excess to the Army supply system.

[3] Consists of $317,472,000 in transit and $67,987,000 at contractors.

[4] Includes $4,880,000 special retention stocks in CONUS stations.

iceable; and 8.4 percent, stocks owned by other claimants. Chart 6 presents the Army supply-system inventories by these major classifications.

Chart 6

Army stock-fund inventories.—Included in the $19.9 billion inventories shown in table 8 are $7.1 billion carried in the Army stock fund. This $7.1 billion of inventories in the Army represent 35.8 percent of the total inventories reported by the Army in its supply system.

Almost half of the Army stock-fund inventories is in the Ordnance Corps category. The Quartermaster group of categories amounts to $2.1 billion and represents 30 percent of the total Army stock fund (table 9).

TABLE 9.—*Stock fund inventories, Department of the Army, as of June 30, 1956*

Defense supply service	505	----	505	505	----	----	----	----	----

[1] Consists of $33,404,000 stocks at contractors, $3,981,000 stocks temporarily in use, $18,043,000 stocks of other adjustments, and $208,983,000 stocks in transit.
[2] Excludes $9,189,000 of Air Force Equity.
[3] Excludes $42,922,000 of Air Force Equity.

NOTE.—The figures in this table are subject to possible minor adjustment when current reviews are completed.

4. *Navy supply-system inventories (excluding Marine Corps)*

For inclusion in this report, Navy's supply-system inventories are grouped into 28 major categories. Five inventory classifications, in addition to stocks in transit, are employed by Navy to indicate the broad retention groups into which its inventories are divided. The definitions for these inventory classifications are:

(1) Peacetime operating stocks are stocks on hand designed to meet the peacetime force materiel requirement.

(2) Mobilization-reserve Stocks are stocks on hand retained to meet general demand after M-day, plus those on hand reserved for specific mobilization programs such as advanced base components, mounting out of Marine Corps units, defense equipping of merchant ships, and harbor defense.

(3) Economic retention stocks are stocks on hand for which there is a firm predictable demand so that retention of stock to meet the demand is advantageous, considering all of the costs involved.

(4) Contingency retention stocks are that portion of the stocks of a military-type item in long supply for which there exists no foreseen requirement, but which it has been determined should be retained for possible military or defense contingencies.

(5) Disposable excess are stocks determined excess to Navy needs but not yet disposed of.

A brief review of the data in table 10 indicates that the category of major Ordnance equipment and explosives, totaling $5.9 billion, constitutes the largest single supply category, as it did a year ago. More than 41 percent of Navy supply-system inventories are in this category. Two other categories have inventories valued at over a billion dollars. These are aeronautical and photographic material, representing 14.8 percent of the Navy total, and Ordnance repair parts, equaling 8.9 percent of the total. These 3 inventory categories together constitute nearly 65 percent of the Navy total at June 30, 1956.

Total value of Navy's supply system inventory was down $679 million at June 30, 1956, from the year earlier figure. This change of 4.5 percent results from some fairly significant shifts in the stocks of the several inventory classifications. Both the mobilization reserve and the economic retention stocks increased by 2.6 and 11.6 percent respectively in the year. Disposable excess also increased by 25 percent during that period. The contingency retention stocks were reduced $525 million, which reduction is $179 million greater than the sum of the increases in the other 2 reserves. Peacetime operating stocks tapered off by $624 million, a reduction of 13.4 percent. Peacetime operating and mobilization reserve stocks together represent 71.4 percent of total distributed Navy stocks. Navy supply system inventories are presented graphically in chart 7.

Forms and publications	331	3	328	328			
Other	2,871	2,025	846	846			

[1] Includes $28,620,000 stock in transit from procurement, $27,083,000 inventories in transit and $279,000 manufacturing work in progress.

[2] Includes $191,000 contingency retention stocks.

5. Marine Corps supply system inventories

The Marine Corps supply system inventories are grouped in table 12 into 10 major categories. These latter are prepaid stocks. Total value of the Marine Corps inventory increased $44 million, or 2.5 percent, during the year since June 30, 1955. The only category with an inventory in excess of a billion dollars is ordnance, which shows an increase of $60 million during the year. Decreases are shown in the general property, individual clothing, subsistence and in-transit categories. Less than 1 percent of the inventory is undistributed. These data by major classification are shown graphically for the Marine Corps in chart 7.

TABLE 12.—*Supply system inventories (including stock funds), Marine Corps, as of June 30, 1956*

[Thousands of dollars]

Category	Total stocks	Undistributed stocks	Distributed stocks		
			Total	Operating	Excess, surplus and salvage
Marine Corps, total	1,843,854	[1] 12,288	1,831,566	1,756,355	75,211
Electronics	189,702		189,702	161,702	28,000
Engineer	96,258		96,258	86,420	9,838
General property	142,265		142,265	129,086	13,179

Stocks paid for not taken up	6,959	6,959					
In transit	5,470	5,470					

[1] Includes contingency retention stocks, $1,000 of electronics and $2,450,000 of motor transport.

6. Air Force supply system inventories

The Air Force supply system inventory, including stock fund supplies, is presented in 22 categories, or materiel groupings, in table 14. Five inventory classifications constitute the major retention groups into which the total inventory is segregated. These are (1) operating and retention, serviceable, (2) operating and retention, reparable, (3) reserve, (4) other claimants, and (5) disposable excess.

TABLE 14.—*Supply system inventories (including stock fund), Department of the Air Force, as of June 30, 1956*

[Thousands of dollars]

Category	Total stocks [1]	Undistributed stocks	Distributed stocks					
			Total	Operating and retention		Reserve	Other claimants	Disposable excess
				Serviceable	Reparable			
Air Force, total	13,978,130	1,874,843	12,103,287	7,729,943	3,380,023	737,164	112,161	143,996
Airframe spares	1,368,185		1,368,185	987,354	305,056	18,066	53,964	3,745
Engines and engine spare parts	3,143,698		3,143,698	1,776,166	1,311,517	18,771	14,012	23,232

Vehicles and spare parts, marine equipment and construction machinery	634,154		634,154	332,955	119,014	167,658	508	14,019
Tools, hand and specialized	77,321		77,321	62,681	1,607	2,221	1,288	9,524
Shop machinery and laboratory equipment	207,969		207,969	127,228	56,629	15,019	766	8,327
Fuels and fuel-handling equipment and parts	47,280		47,280	40,417	3,304	3,139	25	395
Ammunition	267,474		267,474	208,040	8,574	50,303		557
Armament and photographic equipment and supplies	1,071,877		1,071,877	642,288	362,730	58,157	83	8,619
Trainers and training aids	73,294		73,294	50,509	14,351	654	7,505	275
Food service, heating and air-conditioning equipment and parts	53,523		53,523	40,111	7,165	4,638	344	1,265
Musical instruments, athletic equipment, and accessories	3,743		3,743	2,135	291	115		1,202
Clothing, survival equipment and parachutes	216,256		216,256	170,333	27,330	12,054	4,879	1,660
Furniture, office and printing equipment	45,251		45,251	28,404	9,588	5,521	8	1,730
Miscellaneous hardware and general purpose supplies	471,649		471,649	391,058	29,214	34,164	3,135	14,078
Flying field, hangar and night-lighting equipment	90,017		90,017	57,806	8,597	22,706	109	799
Hazard-detecting equipment	7,664		7,664	5,095	2,303	203	2	61
Stocks in local purchase stores	37,812		37,812	37,804	7	1		
Technical services	513,309		513,309	402,339	44,150	54,656	7,538	4,626
Stock fund [2]	604,478	604,478						
All other	622,803	464,739	158,064	86,755	31,781	28,429	62	11,037
In transit stocks	805,626	805,626						

[1] Excludes Air Force inventory held by Army, $1,476,000,000.

[2] Excludes $169,760,000 distributed in preceding categories but included in the stock fund inventory total of $774,238,000 of table 15.

Definitions covering these Air Force inventory classifications are: (1) and (2) operating and retention stocks, both serviceable and reparable, are the stocks which are required to meet both current and future needs of the Air Force. They are not classified as mobilization reserves nor have they been assigned for use in specified projects. These become excess only under specific criteria for each item. While some may be excess to normal current requirements, they are not excess to planned future requirements. (3) Reserve stocks consist of (*a*) all stocks classified as mobilization reserves, plus (*b*) all stocks administratively segregated for specific use in authorized projects. (4) Other claimant stocks are those held for Army, Air National Guard, and Air Force Reserve. (5) Disposable excess stocks are stocks which have been determined to be excess to requirements of the Air Force and are awaiting disposal.

The June 30, 1956, Air Force supply system inventory report represents an increase of $2.0 billion over the comparable report for June 30, 1955. This may be attributed to expanded coverage of the Air Force inventory accounting system and to the increasing cost of spare engines and spare parts necessary to support an ever increasing aircraft inventory. The Air Force Inventory Accounting Monetary System has been expanded to include warehouse inventories at all oversea depots, placing all warehouse inventories at bases and depots worldwide under the system.

Five of the supply-system categories have inventories in excess of a billion dollars each. In descending order of magnitude, these are (*a*) engine and engine spare parts; (*b*) aircraft instruments, assemblies and components; (*c*) air-frame spares; (*d*) armament and photographic equipment and supplies; and (*e*) electronics and communication equipment, spares and supplies. The 5 together constitute almost 66 percent of the dollar-inventory total.

Operating and retention stocks represent 91.8 percent of the total distributed Air Force supply inventory; reserve stocks are 6.1 percent of the total; while the remaining 2.1 percent is divided between other claimant and disposable excess. Operating and retention stocks increased by $1,675 million during the year. Reserve stocks were increased by $213 million, while undistributed stocks climbed $355 million. The Air Force supply system inventories are shown by major classification in chart 8.

Air Force stock fund.—The Air Force stock fund consists of six divisions: Aviation fuels, clothing, medical-dental, general supplies, commissary, and Air Force Academy. The total inventory amounted to $774,238,000 on June 30, 1956. This represents an increase of nearly $227 million, of which nearly $224 million came about as a result of adding the general supplies, commissary, and Air Force Academy stocks to the stock fund. (See table 15.)

[1] Includes $19,967,000 in transit stocks and $7,483,000 stocks in hands of contractors.

SECTION B. EQUIPMENT ISSUED FOR USE

1. General

Quantitative records are maintained by the military departments of equipment taken from the supply system and issued to units for use. Except for such major classes of equipment as aircraft and ships, however, data are not available by specific categories for such stock or equipment in the possession of using units or troops. The monetary accounting reports of both Navy and Air Force normally show a total value only for such stocks. Army does not include its issued stocks and equipment in its monetary accounting system but it does use a periodic statistical report of the quantities of the major items to develop estimates of these monetary values.

2. Office of the Secretary of Defense

Within the Office of the Secretary of Defense, major items of equipment in use as of June 30, 1956, represented a cost of $1.85 million. Office equipment and furniture accounts for 97 percent of this total.

3. Army—Major military equipment in use

Army estimates that the value of major items of equipment in the possession of Army troops and National Guard units was $4.8 billion as of March 30, 1956. These are the latest data available from Army. This equipment consists of combat and support materiel, such as artillery, small arms, chemical weapons, tanks, other combat vehicles, tactical and support vehicles, Army aircraft, guided missiles, and other major equipment.

4. Navy—Military equipment in use

The acquisition cost of Navy's equipment in use is estimated at $27.3 billion as of June 30, 1956. Of this total, $19.8 billion represents the cost of 2,758 ships in the Active and Reserve Fleets.

Service craft, such as utility land craft, minesweeping boats, open lighters, floating derricks, and harbor tugs totaled 2,033 at year end. These were valued at slightly less than a billion dollars.

Navy program aircraft totaled 13,000 as of June 30, 1956, reported as costing $5 billion. Items of equipment other than production equipment, in use at shore installations on the report date, had an acquisition cost of $1.6 billion.

5. Air Force—Military equipment in use

The June 30, 1956, figure representing Air Force cost of equipment in use was $22.4 billion. Its 28,600 aircraft are reported as costing $17.8 billion with all other in use equipment valued at $4.6 billion. The aircraft total includes 2,138 in the custody of the Air National Guard, and 93 assigned to Civil Air Patrols.

6. Department of Defense production equipment

Production equipment under control of the Department of Defense as of June 30, 1956, was reported as having an acquisition cost of $5,307 million. Production equipment includes metalworking machinery and other allied industrial equipment such as metal heat-treating furnaces, transformers, hardness testing machines, balancing machines, etc.

Metalworking equipment controlled by Army at June 30, 1956, all located within the continental United States, had an acquisition cost of $1,011 million. This constitutes an increase of 4.3 percent in the year, most of which occurred in the metal-forming tools portion of this group. Army reports production equipment, other than metalworking equipment, of the types used for making military end items with an estimated acquisition cost of $1,660 million.

Navy's production equipment represents acquisition costs of $1,307 million. The bulk of this, 71.8 percent, is in metalworking equipment. The other production equipment consists of construction and excavating, railroad transportation, electrical distribution, and materials-handling equipment which is not included in the supply system's inventory data or other portions of this report.

The acquisition cost of Air Force-controlled production equipment at June 30, 1956, was $1,330 million. More than three-fourths of this was metalworking equipment. Air Force controlled 87,228 metalworking-equipment items costing $500 or more each with a total acquisition cost of slightly more than $1 billion. Other equipment such as excavating, concreting, airfield maintenance, materials handling, and the like under Air Force jurisdiction represented an acquisition cost of $305 million.

TABLE 16.—*Production-equipment inventory, Department of Defense, as of 30 June 1956*

[Thousands of dollars]

	Total	Metalworking	Other
Department of Defense	$5,307,365	$2,973,553	$2,333,813
Army	2,671,154	1,010,795	1,660,359
Navy	1,306,562	[1] 938,248	368,304
Air Force	1,329,660	1,024,510	305,150

[1] Includes $86,034,000 representing the cost of installing machine tools and $12,164,000 of metalworking equipment located in overseas areas.

The Department of Defense owned 268,870 metalworking tools in continental United States, each costing $500 or more, at June 30, 1956. Acquisition cost of these metalworking tools was $2.9 billion. The category breakdown is shown in table 17. The Navy reports an additional 4,187 such items of equipment, costing $12 million, located outside the continental United States, principally in the Territories and possessions.

TABLE 17.—*Inventory of metalworking equipment costing $500 or more each, Department of Defense, Continental United States, As of June 30, 1956*

[Thousands of dollars]

Standard commodity classification	Department of Defense	Army	Navy (including Marine Corps)	Air Force
Total, metalworking equipment	$2,875,355	$1,010,795	$840,050	$1,024,510

SECTION C. INVENTORIES HELD IN INDUSTRIAL FUNDS

Working-capital funds are authorized by section 405 of title IV of the National Security Act, as amended. The use of industrial funds permits the financing of industrial or commercial-type activities and the development of production costs to be used as a basis for charging the appropriations of customers for the products or services furnished to them by the fund.

As of June 30, 1956, 45 activities in the Department of Defense were operated under industrial-fund charters. The Army had 19; the Navy 24 (with 1 a printing activity located in 23 plants); the Air Force 2 (1 of which is a printing activity located in 8 different plants and 1 is a laundry and dry-cleaning activity operated at 47 installations). The total inventories, consisting of raw materials, supplies, work in process, and finished goods held in all industrial funds in the Department of Defense, amounted to $312 million on June 30, 1956.

The industrial-fund inventories for each group of activities within each Department are shown in table 18.

TABLE 18.—*Industrial fund inventories, Department of Defense, as of June 30, 1956*

[Thousands of dollars]

Military department and type of industrial activity	Total inventories	Materials and supplies	Work in process and finished goods
Department of Defense, total	$311,773	$102,688	$209,085
Army, total	86,617	25,834	60,783
Arsenals and armories	72,088	20,807	51,281
Quartermaster depot manufacturing and maintenance	1,742	1,056	686
Research activities	5,389	2,800	2,589
Printing plant	64	46	18
Transportation terminals	7,334	1,125	6,209
Navy, total	224,265	76,097	148,168
Shipyards	128,632	36,588	92,044
Ordnance plants	60,284	8,280	52,004
Printing plants	1,233	1,008	225
Laboratories	4,810	1,173	3,637
Marine clothing and equipment	460	202	258
Military Sea Transport Service	28,846	28,846	----------
Air Force, total	891	757	134
Printing service	564	430	134
Laundry service	327	327	----------

SECTION D. NATIONAL INDUSTRIAL RESERVE

1. General

Public Law 883, 80th Congress, the National Industrial Reserve Act of 1948, provides for establishing "adequate measures whereby an essential nucleus of Government-owned industrial plants and a national reserve of machine tools and industrial manufacturing equipment may be assured for immediate use to supply the needs of the Armed Forces in time of national emergency or in anticipation thereof."

The properties still owned by the Government are managed by the General Services Administration (as successor to the Federal Works Agency) under general policies established by the Secretary of Defense. Since the Department of Defense has a contingent claim and production priority rights in all the national industrial reserve plants including those which GSA has disposed of with a recapture (national security) clause and those plants leased, or in GSA custody, data on these are included in this section of this report. None of the properties in this reserve, however, have been included in the totals for real property (pt. I) or metalworking equipment (pt. II, sec. B), or in the consolidated totals (table 1) of this report because this reserve is held by GSA.

2. Plant Reserve

The National Industrial-Plant Reserve contained 110 facilities as of June 30, 1956. The sponsoring military department and status of these plants on that date were:

Sponsor	Total	Sold (with recapture clause)	Lease or contract	Inactive
Department of Defense	110	87	19	4
Army	24	18	5	1
Navy	37	34	3	----------
Air Force	49	35	11	3

In keeping with Department of Defense policy to release as many reserve plants as possible to private corporations, 87 of the plants in the national industrial reserve have been sold subject to appropriate restrictions and recapture clauses, 19 are being operated under lease or contract agreement, and the remaining 4 plants in the reserve are being maintained at Government expense by the GSA.

The net residual acquisition cost (original cost of construction and acquisition of entire plant less portions previously disposed of) of these 110 plants to the Government was $1,287 million. The sale price of the 87 plants sold by the Government was $422 million.

The status of the 110 plants by category of product is shown in table 19. Of the 23 plants still owned by the Government, 13 are for the production of basic raw materials or products in the aluminum, magnesium, and miscellaneous metals fields, and 10 are producing military end items and components, mostly in the aircraft, tank automotive, and electronics fields.

TABLE 19.—*National industrial reserve plants, by category of products and status, as of June 30, 1956*

Category of product	Total	Sold (with recapture clause)	Government owned	
			Lease or contract	Inactive
All plants	110	87	19	4
Aircraft and components	30	25	5	
Aluminum	14	13	1	
Basic products, miscellaneous	2	2		
Chemical and petroleum	4	4		
Electronics	4	3	1	
Explosives and ammunition loading	5	5		
Guns and ammunition	3	2	1	
Iron and steel	14	12	1	1
Machine tools	2	2		
Magnesium	9	2	4	3
Metals, miscellaneous	7	3	4	
Shipbuilding and components	9	9		
Tank and automotive	4	2	2	
Miscellaneous	3	3		

The 4 idle plants in the reserve consist of 3 magnesium and 1 steel-casting plant. The magnesium plants are sponsored by the Air Force and the steel-casting plant by the Army.

3. Equipment reserve

The total number of items of metalworking equipment in the national industrial equipment reserve on June 30, 1956, was 6,358. The original acquisition cost of these items was reported as $13.8 million.

Continuing review is being made by the Office of Secretary of Defense of the production equipment in the national industrial equipment reserve to eliminate those items having a purely military application and those which cannot be retained economically. Military items are transferred to the military departments as needed. Items to be retained in the NIER are primarily those of a general-purpose nature which may be used for defense support and essential civilian production in the event of mobilization.

Part III. Progress in Recording and Reporting Inventories

Section A. Office of the Secretary of Defense Regulations Pertaining to Property Accounting and Reporting

A digest of the principal regulations, directives, and instructions which provide for the recording or reporting of inventory data which have been issued by the Office of the Secretary of Defense since the enactment of title IV of the National Security Act and are still in effect as of June 30, 1956, is presented in this part of the report. These current directives and instructions, in some instances, supersede or revise earlier directives and instructions on the subject of property accounting and reporting.

1. *Regulations covering the operation of working capital funds for industrial- and commercial-type establishments (industrial funds), issued July 13, 1950*

These regulations provide for the establishment of 3 industrial funds—1 in each military department. They also establish the policy for the initial transfer of funds, inventories, and properties to the industrial funds; the handling of work orders and reimbursements for such work; provision for accounting and cost accounting systems; authorization to incur obligations and expend funds; budgetary control; reporting on operations; and auditing.

2. *Basic regulations for the military supply system (DOD Directive 4000.8), issued November 17, 1952*

These basic regulations set forth important objectives in the field of supply which are to be implemented by the military departments as quickly as practicable and redefine the relationships between the basic regulations and other Department of Defense directives regulating supply management. They specifically require that "all supply accounting at depot, post, camp, station, base, and installation level will be developed to achieve integration and uniformity on a quantitative and monetary basis, except for supplies and property with troop units and afloat, where periodic quantitative inventories only will be required," and that "prescribed stock levels shall be uniform among military departments where similar conditions exist."

3. *Inventory of machine tools and other production equipment (DOD Directive 4215.12), issued June 5, 1953, and subsequent amendments*

This directive provides for the preparation and maintenance of adequate inventory records of Department of Defense owned machine tools and other production equipment in the departmental industrial equipment reserves and for obtaining semiannual summary inventory reports.

4. Regulations governing stock fund operation (DOD Directive 7420.1), issued February 1, 1954: (a) Inclusion of cost of transportation to first destination as element of the standard price of stock fund materiel (instruction 7420.2), issued February 1, 1955; (b) authorized donations of surplus materiel from working-capital funds to Health, Education, and Welfare (instruction 7420.3), issued June 9, 1955

Directive 7420.1 provides for establishment of a stock fund in each of the four services setting up procedures for the issuance of charters; initial transfer of funds, inventories, and other assets; pricing policy; management policy, sales of stocks, accounting; authority to obligate and expend funds; budgetary control; reporting; and auditing. Instruction 7420.2 clarifies and interprets pricing policy provisions insofar as transportation costs are concerned. Instruction 7420.3 provides for establishment of accounts in each industrial fund and departmental stock fund and division thereof to reflect the authorized donations of surplus materiel to Health, Education, and Welfare.

5. Inventory of military real property (DOD Instruction 4165.14), issued March 31, 1954

This Instruction provides a uniform procedure to be followed by the military departments for the establishment and maintenance of a worldwide inventory of real property (land and improvements) and for the preparation of an abridged inventory in summary form. Specific instructions are contained in this Instruction as to the categories, physical units of measure, the data, maps, and descriptive information which are to be kept on the records in the military departments and those that are to be summarized and reported to the Office of the Secretary of Defense. The military departments are required to keep their records current at all times and to submit summary reports semiannually.

6. Preparation of materiel planning study, DD Form 764 (DOD Directive 4200.1), issued April 9, 1954

This directive provides for a uniform presentation of demand and supply data from which the Office of the Secretary of Defense and the military departments can discharge their responsibilities in the field of requirements and supply management. Worldwide assets on hand and their general location are shown. The Directive is recordkeeping in nature and studies of major items currently being procured are requested by separate memoranda as required—usually semiannually. A list of items was developed for which a materiel planning study was requested from the military departments. This original list of items has been revised periodically for the purpose of adding or deleting items as they increase or decrease in importance.

7. Reporting of identification progress in the Federal cataloging program (DOD Instruction 4130.1) issued June 2, 1954; (a) development and maintenance of the Federal Catalog System Within the Department of Defense (DOD Directive 4130.2), issued April 6, 1955; (b) progress reports on status of conversion to Federal Catalog data within the Department of Defense (DOD Instruction 4130.3), issued June 28, 1954, and (c) utilization of Federal Catalog data (DOD Directive 4130.4), issued July 6, 1955

Instruction 4130.1 provides for the uniform reporting by the military departments of data essential to the management and control of the Federal cataloging program Identification Schedule.

8. Inventory management (DOD Directive 4140.1), issued July 1, 1954, and a series of DOD instructions: (a) Management of mobilization reserve stocks (instruction 4140.2), issued July 28, 1954; (b) management of materiel in long supply (instruction 4140.3), issued January 11, 1956, revising the issue of August 19, 1954; (c) material pipeline, including levels of supply (instruction 4140.4), issued September 3, 1954; (d) acquisition of materiel from GSA stores depots (instruction 4140.5) issued April 15, 1955; (e) interservice supply support (directive 4140.6), issued July 5, 1955; (f) control, supply, and positioning of materiel (instruction 4140.7) issued July 20, 1955; and (g) inventory management report for materiel in the military supply systems (instruction 4140.9), issued April 27, 1956

Directive 4140.1 establishes the Department of Defense basic policy for the management of materiel inventories and uniform definitions. It calls for a physical inventory of materiel and reconciliation of records at least once a year, and requires that each item of materiel, both for military or industrial use within a military service, shall be under the cognizance of only one inventory control point. These supply and inventory control points are required to maintain records, make reports, channel the transportation of materiel in the most economical manner, review the inventory status in relation to current and future requirements, determine and declare servicewide excess stocks, and schedule rebuilding of economically repairable stocks. Instruction 4140.2 establishes the policies regarding the retention, storage, care, and preservation of mobilization reserve stocks and their stock record accounting, reporting, and control. Instruction 4140.3 establishes policies, criteria, and procedures requiring the optimum use of materiel in long supply within the Department of Defense. Instruction 4140.4 prescribes definitions to be used for identifying the levels of supply in the materiel pipeline. Directive 4140.5 prescribes the policies and procedures governing Department of Defense acquisition of materiel from GSA. Directive 4140.6 sets policies, criteria, and procedures to facilitate optimum interservice use of available materiel within the Department of Defense. Instruction 4140.7 provides procedures, criteria, and guidance governing the control, supply, and positioning of materiel within Defense. Instruction 4140.9 prescribes quarterly and annual reporting as to the status, condition, purposes, and activity of the materiel inventories of the military departments.

9. Inventory of commercial- and industrial-type manufacturing (DOD Instruction 4100.19), issued February 3, 1955

This instruction provides for the taking of an inventory by the military departments of commercial- and industrial-type manufacturing facilities, which are owned and operated by the Department of Defense and which produce products for its use.

10. Facility classes and construction categories (DOD instruction 4165.3), issued March 11, 1955

This instruction provides a standard numerical code for the identification and classification of facility classes and construction categories to permit uniform identification and classification of real property in planning, programing, budgeting, accounting, and reporting; exclusive

of the civil-works activities of the Army Corps of Engineers or emergency construction in direct support of combat operations for any of the military departments.

11. Reporting and screening of excess personal property (DOD instruction 4160.9), issued June 24, 1955

This instruction establishes departmentwide policy and procedures for reporting personal property under Department of Defense control, which is excess to the needs of the organization holding such property. It routes notifications of excess personal property so that all elements of the Department of Defense may be informed of its existence and character. Provision is made for notifying all other elements of the Federal Government of excesses remaining after Department of Defense needs are met. Finally, the instruction provides for disposal of such excesses which are not absorbed by the Federal Government.

Instruction 4140.6, briefed in paragraph 8 of this section, has been implemented by establishment of the (joint) Interservice Supply Support Committee. This committee has chartered a number of commodity coordination groups to develop and assure interservicing whenever it is in the best interest of the Department of Defense. Under this procedure, and revised requirement for the management of materiel in long supply, the examination of all Department of Defense assets, worldwide, is mandatory before procurement occurs and before disposal action takes place. Thus, the slower, post-screening of excess personal property by means of lists of excess items, will soon be unnecessary and will be supplanted by a much faster and more effective procedure.

12. Motor vehicle uniform reporting system (DOD Instruction 4500.7), issued July 1, 1955

This instruction establishes standardization of terminology, definitions, and reporting of motor vehicles for use of the military departments in keeping the Department of Defense and other elements of the Federal Government informed as to the inventory of this class of equipment. The system, in addition, measures utilization and it further provides operating and maintenance cost data.

13. Policy and procedures relating to nonexcess personal property to be sold or exchanged for replacement purposes (DOD Instruction 4160.1), issued July 14, 1955

This instruction establishes Department of Defense policy relating to the exchange or sale of personal property for replacement purposes where the proceeds of the sale are applied to acquire similar items. It also prescribes policy and procedures affecting the utilization screening of such property before sale or exchange.

14. Identification and classification of Department of Defense industrial production equipment (DOD Instruction 4130.5), issued August 26, 1955

This instruction provides for a uniform method of identifying and classifying all Department of Defense industrial production equipment in industrial facilities and military installations and in military supply systems by cataloging each item of equipment through the Federal Catalog System.

15. Materials handling equipment utilization and allowance (DOD Instruction 4145.11), issued August 29, 1955

This instruction (*a*) establishes uniform criteria for determining quantitative requirements and allowances for the principal items of materials handling equipment, (*b*) provides a means for determining the quantities of such equipment required by an installation and (*c*) prescribes reports and data pertinent to the effective application of criteria and analyses of equipment utilization.

16. Preparation of materiel planning study, aircraft engines (DOD Instruction 4230.2), issued September 7, 1955

This instruction establishes (*a*) a uniform system for recording requirements and supply data for aircraft engines and (*b*) a basis for the periodic review of current and future engine programs and a comparison of those programs to mobilization capabilities.

17. Real property: acquisition, management, and disposal (DOD Directive 4165.6), issued September 15, 1955; program for management of real property maintenance activities (DOD Instruction 4165.9), issued June 23, 1955; and retention of real property (DOD Directive 4165.20), issued August 27, 1955

Directive 4165.6 brings up to date the Department of Defense policy relative to the acquisition, management, and disposal of real property and delegates the authority to accomplish these actions within each of the military departments to the respective Secretary. Instruction 4165.9 outlines a program for uniformly effective management of real property maintenance activities. Directive 4165.20 establishes Department of Defense policy governing the retention of real property by the military departments, establishes criteria by which such property will be retained or reported excess and provides for a review of real property holdings within the military departments.

18. Production-delivery status and progress reporting between military departments (DOD Instruction 4200.4), issued October 11, 1955, and materiel program control—Principal items (DOD Instruction 4200.6), issued December 14, 1955.

Instruction 4200.4 establishes a requirement for, and a method to accomplish, the exchange of information between two or more of the military departments relative to production-delivery status and progress reporting in connection with basic items procured or produced by one military department for another as the result of a single procurement assignment agreement. Instruction 4200.6 establishes the criteria for determining end items of major importance and provides for the accumulation of data, the regular publication of studies, and the interchange of information between the military departments relative to those major items.

19. Military public works basic record keeping requirements (DOD Instruction 4270.3), issued October 13, 1955

This instruction provides for the maintaining of basic records, relative to military public works construction activities at the headquarters of each of the military departments, from which summary data may be extracted as required.

85132—56——7

20. Petroleum products status and program report (DOD Instruction 4220.1), issued January 20, 1956

This instruction provides for quarterly reports from the military departments showing the procurement program and deliveries, consumption, sales, issues, inventories, and analyses of the reported data for selected petroleum products along with dollar values for the procurement program and deliveries.

21. Policies for Implementation of Single Manager Assignments (DOD Directive 5160.12), issued January 31, 1956, and a series of DOD directives (a) Single Manager Service Assignment for Ocean Transportation (DOD Directive 5160.10), issued May 28, 1956; (b) Single Manager Assignment for Subsistence (DOD Directive 5160.11), issued May 3, 1956; (c) Single Manager Service Assignment for Traffic Management Within the United States (DOD Directive 5160.14), issued May 1, 1956; (d) Single Manager Assignment for Clothing—Textiles (DOD Directive 5160.15), issued May 4, 1956 and (e) Single Manager Assignment for Medical Materiel (DOD Directive 5160.16), issued May 4, 1956

Directive 5160.12 establishes the basic pattern of organization and procedures for single manager assignments for common use items or common service activities, identifying the primary objectives of the single manager assignments as being the elimination of duplication and overlapping of effort between and among the military departments and the improvement of effectiveness and economy in supply and service operations throughout the Department of Defense. Directive 5160.10 creates a single manager service assignment for ocean transportation designating the Secretary of the Navy as the single manager. Directive 5160.11 creates a single manager for subsistence designating the Secretary of the Army as the single manager. Directive 5160.14 creates a single manager service assignment for traffic management within the United States, designating the Secretary of the Army as the single manager. Directive 5160.15 creates the single manager assignment for clothing—textiles, designating the Secretary of the Army as the single manager. Directive 5160.16 creates a single manager assignment for medical materiel, designating the Secretary of the Navy as the single manager.

22. Recording and Utilization of Idle Production Equipment (DOD Directive 4215.9), issued February 2, 1956

This directive prescribes the policies and procedures for reporting and redistributing idle machine tools and certain other related production equipment owned or controlled by the Department of Defense.

23. Materiel program control of secondary items—clothing and textile equipment (DOD Directive 4200.7), issued May 5, 1956

This directive provides policies and criteria governing the uniform determination and application of requirements for clothing and textile equipment items in relation to procurement, retention, and disposal programs.

SECTION B. DEPARTMENT OF THE ARMY

Financial inventory accounting for all bulk stocks in Army's supply system was inaugurated during 1953. By the end of the year, the formal system had been installed in all depots within the ZI. One

year later, it had been expanded to include market centers, overseas depots (other than field Army depots) and better than two-thirds of the ZI post, camp, and station inventories. On June 30, 1956, the only major bulk inventories not covered by the financial inventory accounting system are those in Korea, and the Seventh Army in Germany. Within the next 6 months, Okinawa bulk stocks are to be incorporated within financial inventory accounting. Army does not plan to bring Seventh Army stocks, which are maintained for the close support of tactical units, into the system.

The Army is applying its recorded and reported bulk inventories in the following priorities: (*a*) Operating stocks; (*b*) mobilization reserve stocks; (*c*) economic and contingency retention stocks; and (*d*) excess stocks (excess to the reporting Army command, but not necessarily excess on a worldwide Army basis).

In the attempt to further improve and refine its inventory management of major items the Army is testing a system to improve the repair parts support of equipment. Heretofore, the end item only was identified and counted. Under the system being tested the major components, accessories, and power units will be separately identified. This data will be transferred to electric accounting machine cards and used to develop statistical density of both the end items and the associated components. The absence of data of this type relative to quantities by make and model of such components, all of which must be supported by repair parts, has restricted logistic support. The problem has been particularly acute in the field of engineer items of equipment many of which have interchangeable commercial type accessories. The Army test is to be conducted by the Corps of Engineers during the first half of fiscal year 1957.

Army regulations were published which require, beginning July 1, 1956, the reporting of financial inventory accounting (management) categories related to the Federal supply classification insofar as practicable. For the most part, this type of alinement can be made but there are some items falling in the general supplies and ordnance areas which are difficult to aline in the Federal classes.

The Army, by agreement with the Air Force, has effected a major operation in eliminating Air Force item equity accounts of approximately 400,000 maintenance and operations type items. This change obviates the necessity for separate accounting for all transactions, separate stock replenishment, and separate determination of excesses. It also provides a basis for better utilization of assets, greater flexibility in supply support operations, and full realization of the advantages of stock funds in interservice supply support.

Another significant contribution to control of Army inventories, by item, is the development of a new regulation on overseas order and shipping time. In this regulation, the Army has established specific assignments of responsibilities and specific time allowances for each part of the cycle. This has the effect of tightening management control over the entire oversea requisitioning process. It permits more accurate forecasting of quantities to be placed on order and more realistic scheduling of arrival of supplies in oversea commands.

In November 1955, the Army directed its supply managers to study the feasibility of using modern electronic data processing and communications techniques in the management of logistics missions. Five of these studies have been completed. As a result, one machine

is being installed at each of four national stock and supply control points. An additional 10 studies are in process and will be completed during fiscal year 1957.

As a part of this major study, a method has been developed for computing materiel requirements in mathematical terms for adoption to machine operations. This method emphasizes simplicity, and uniformity in its design, and will result in more accurate requirement determination, balanced inventories, and more effective utilization of personnel.

The ultimate objectives of this program are (*a*) to improve effectiveness of logistical operations. In the supply field this will include, but not be limited to obtaining: more accurate computations of requirements; more responsive procurement, distribution and redistribution of stocks; faster supply actions; and more current information for budgeting and other management decisions. (*b*) To reduce operating expenses—which includes more effective use of personnel and facilities. (*c*) To provide expandability—utilizing the capability of automatic data processing systems to handle large workload increases without requiring significant increases in personnel, training and facilities. (*d*) To insure continuity—based on the ability of ADPS to continue operations at alternate locations in the event of disaster.

The Army is establishing a system to identify, develop, and relate logistics and management improvement objectives to primary programs, and report on improvements in the logistics system. The system is primarily designed to measure progress on project activity being undertaken to accomplish required objectives for improving the logistics system.

Quarterly summary reports of progress on related projects which contributed to reaching the objectives will be required. In addition, information generated by the system will be utilized to meet recurring reporting requirements directed by higher authority (e. g., DOD Directive 4000.8). The reports will be analyzed and evaluated to highlight major areas of accomplishment or problems encountered which may impede progress toward logistics goals. This program will bring into consonance programming, budgeting, funding and reporting of project execution for review by top management in attainment of the logistic missions under the established Army system.

In June 1956 the Army announced an improved system for distributing expendable supplies. Distribution outlets, known as self-service supply centers, are to be established at all installations where the volume of supply transactions warrants. Plans call for opening such centers at the 47 largest ZI posts, camps, and stations during fiscal year 1957. In concept and operation, self-service Supply centers are comparable to modern supermarkets. Many of the modern business practices proven by retail merchants have been incorporated. Some of the advantages of this concept, new to the Army, are: (*a*) Improved supply service to authorized customers as a result of establishing a single distribution point for expendable type items of all the technical services; (*b*) simplification of accounting and supply practices by elimination of documents as a means of making requirements known to the distributor; (*c*) improvement of supply practices at the unit level by discouraging "hoarding" through the assurance

to using units that supplies distributed through a center are available at all times on a self-service basis; (*d*) increase in cost consciousness on the part of consumers through the use of monetary controls; and (*e*) development of financial experience data to support performance budgeting and consumer funding programs.

SEC. C. DEPARTMENT OF THE NAVY

The Navy has used the Navy stock fund since 1893 as a financing medium for inventories. Under authority contained in section 405 of the National Security Act of 1947, as amended, and regulations governing stock fund operations approved by the Secretary of Defense, February 1, 1954, a charter for the Navy stock fund was approved by the Department of Defense on June 27, 1955. This document governs the current operations of the fund.

All materials procured and/or stored in the Navy supply system for issue for maintenance and operating purposes are authorized to be carried in the Navy stock fund. Normally, this will include all consumable types of material and relatively minor items of equipment, including parts and components used in the manufacture, assembly, maintenance or rebuild of end items for the military supply system.

The major categories of material financed during fiscal year 1956 by the Navy stock fund were as follows: Special shipboard and electrical fittings and fixtures, clothing, general stores, ship repair parts, medical and dental material, blood plasma and related items. provisions, electronics, ship's store and commissary store stock, fuel and related items, and vehicular equipment parts.

Under the direction of the Secretary of the Navy, the Chief of the Bureau of Supplies and Accounts administers and manages the Navy stock fund in conformity with such policy statements, appropriate regulations and procedures as may be issued by higher authority. The Navy stock fund as covered by the charter excludes all material financed under the Marine Corps stock fund, which is established by separate charter and managed under the direction of the Commandant of the Marine Corps.

Recognizing the growing significance of stock fund operations in all places of Navy management, the Secretary of the Navy on January 12, 1956, established the Navy Stock Fund Board. The mission of this Board is to provide integrated Bureau and Deputy Chief of Naval Operations review and logistics guidance to the Chief, Bureau of Supplies and Accounts, as the general manager of the Navy stock fund.

During fiscal year 1956 further progress was made in the elimination of dual financing of Navy inventories. The value of transfers of material from the appropriation purchases account to the Navy stock account approximated $57 million and represented primarily the capitalization of material placed under the inventory control of established Navy stock fund managers.

The Secretary of the Navy, by SecNav Notice 4440 of May 21, 1956, advised all ships and stations that on July 1, 1956, the Navy stock account would be extended to include the appropriation purchases account inventories of submarine repair parts, photographic material and ship's repair parts, and electronics and vehicular equipment parts not previously financed by the fund. This action was the

culmination of much planning, many interbureau meetings, and policy decisions directed toward the further extension of the Navy stock fund to ultimately finance the procurement of all naval stocks of a replenishable nature.

An expanded financial inventory control report was introduced for systemwide application as of July 1, 1955. The expanded report provides additional information on standard price gains and losses, purchase variance gains and losses, material returned to store, and transfers between categories of material, condition and Federal group or Navy class of material.

Financial accounts for allotment administration of Navy stock fund segments by Navy activities were reduced by approximately 50 percent effective April 1, 1956, as a result of improvements in accounting procedures. Corresponding efficiencies were realized in status of funds reports without reducing their effectiveness in management of the Navy stock fund.

Special projects have been established in several areas to improve and refine further the Navy stock fund accounting and reporting procedures. The more important of these projects are: (*a*) A practicable procedure has been developed to identify purchases by cognizance symbol and source. It is contemplated that this procedure will be incorporated in the Navy accounting system during fiscal year 1957; (*b*) studies are being completed on a practicable procedure to obtain more detailed sales information by customer for each category of Navy stock fund financed material. It is anticipated that this procedure will be incorporated into the Navy accounting system during fiscal year 1957. Greater detail on sales by customer will assist the supply demand control points in projection of future sales for budgetary purposes, and (*c*) a study has been initiated to review the entire financial inventory accounting and reporting procedures. The purpose of this study is to reevaluate the requirements for monetary information, to determine the depth of detailed reporting required to satisfy these requirements, and to decide if the most efficient methods are being utilized to collect this information.

SECTION D. DEPARTMENT OF THE AIR FORCE

During the fiscal year ending June 30, 1956, the Air Force depots overseas completed their implementation of inventory accounting (monetary) and reported both the inventory and the transactions under prescribed procedures. The first of these reports arrived at Headquarters USAF in November 1955 and complete dollar values of warehouse inventories in depots and bases worldwide are now available. The Air Materiel Command assumed control of and responsibility for overseas depot stocks in the Pacific area in October 1955 and in the European area in January 1956. All inventories in depots worldwide were thus made the responsibility of the Air Materiel Command.

June 1, 1956, instructions were issued for implementation effective July 1, 1956, to consolidate the monetary accounting for all category III (low-cost) items, without regard to class of property, in warehouse inventories at bases. Inventories in depots will continue to be maintained separately by class for all items. It is considered that this consolidation of inventory data pertaining to low-cost items will

reduce the number of separate ledgers required without detracting from management usefulness at the local level and still provide sufficient summary data at higher levels pertinent to total inventories and transactions.

Inventory segmentation techniques implemented during this period constitute a substantial improvement in inventory management since they portray the location of inventory, the dollar value of major commodity groupings, and the planned use of the inventory segment to indicate the dollar value of operating stocks, mobilization reserve stocks, economic retention stocks, and residual stocks. Segmentation is developed on an individual item basis during the buying-operating requirements computations. This data, after consolidation, is updated by the application of current inventory accounting monetary information. Segmentation is an excellent management tool since through varying degrees of consolidation it provides appropriate information for each level of management. For example, segmentation data can be provided by individual item for lower management levels or simply in the form of four segments representing the entire dollar value of inventory of the Air Force for top level management.

An aggressive program is under way to mechanize inventory accounting records at those bases at which mechanization is economically feasible. Thirty-three bases are currently using punchcard equipment to account for inventories and it is planned to extend this method to 106 bases during the fiscal year 1957. Mechanization will provide inventory data that is more accurate and timely and the Air Force expects that it will permit a more comprehensive job with no more people. Depots are introducing electronic computers for use in inventory and requirements computations to capitalize on the inherent speed and accuracy of these machines. As of June 30, 1956, inventory accounting was being performed on 17 small-scale electronic data processing machines at various installations within the United States.

As of July 1, 1955, the Air Force added 3 new stock fund divisions to the 3 divisions already in existence. As of June 30, 1956, the Air Force stock fund included the following divisions: clothing, aviation fuels, medical-dental, general supplies, commissary, and Air Force Academy. No additional classes of inventories are scheduled for inclusion under stock fund operations during fiscal years 1957–58, but it is contemplated that the General Supplies Division will be expanded to include base level and overseas depot stocks of the same nature now capitalized at Zone of Interior depots.

In the real property field, the Air Force is still engaged in implementing existing Department of Defense instructions relating to uniform procedures to be followed by all military departments in maintaining a worldwide inventory of land and improvements.

PART IV

WORLDWIDE RECAPITULATION OF U. S. GOVERNMENT REALTY AS OF JUNE 30, 1956

Tables of Reconciliation Between Department of Defense and General Services Administration, Realty Acreage and Cost Data as of June 30, 1956

Worldwide recapitulation of United States Government realty as of June 30, 1956

[In thousands of dollars]

Type	Cost		
	In United States	Outside United States	Total, worldwide
Federally owned real property included in overall report:			
Civilian executive agencies, offices and establishments	12,838,710	1,295,523	14,134,233
Department of Defense: Civil functions, Corps of Engineers	3,391,243	7,441	3,398,684
Military functions:			
Department of the Army	6,879,024	1,070,959	7,949,983
Department of the Navy (including the Marine Corps)	6,530,395	1,357,309	7,887,704
Department of the Air Force	4,839,086	2,241,957	7,081,043
Properties managed by the Architect of the Capitol	[1] 317,066	----------	[1] 317,066

Mineral resources, civilian and military	[1] 4,697,320	[1] 41,000	[1] 4,738,320
Total	48,403,692	6,525,383	54,929,075
Investments in related areas not included in overall report (excluding the Department of Defense):			
Construction in progress	----------	----------	939,744
Leasehold improvements	----------	----------	79,149
Real-estate collateral acquired	----------	----------	143,681
Total investments in related areas	----------	----------	[2] 1,162,574
Total, Worldwide, U. S. Government realty	----------	----------	56,091,649

[1] Estimated current present-day evaluations.

[2] All assets herein reported are shown in gross amounts with no deductions for allowances for depreciation. Only wholly Government-owned corporations and wholly owned assets are included. Assets held under trust arrangements and interagency assets are excluded. This table does not include figures for construction in progress which the Department of Defense is not prepared, at this time, to report a firm basis for the three departments of the Air Force, Army, and Navy. It is anticipated that such data will be available for the committee's next report.

GENERAL SERVICES ADMINISTRATION,
Washington, D. C., November 30, 1956.

Hon. WILLIAM L. DAWSON,
Chairman, House Committee on Government Operations,
House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: We are pleased to submit the attached summary tabulations of the real property owned by the Federal Government throughout the world. They were compiled from the detailed inventory reports submitted to the General Services Administration by the various participating agencies in compliance with GSA Circular No. 80, revised, dated July 3, 1956.

These tabulations summarize all real property holdings of the Federal Government. As of June 30, 1956, the Federal Government owned real property throughout the world with an acquisition cost of $40.3 billion, excluding any value for public domain land. Properties costing $34.3 billion or 85.1 percent are located in the United States, while those properties located overseas cost $6 billion or 14.9 percent of the total.

The full real property report will be forwarded as soon as it is completed, together with supporting detailed inventory listings.

Sincerely yours,

F. G. FLOETE, *Administrator.*

INVENTORY OF REAL PROPERTY OWNED BY THE UNITED STATES THROUGHOUT THE WORLD AS OF JUNE 30, 1956

AUTHORITY

An inventory of real property owned by the United States throughout the world, as of June 30, 1956, is being compiled by the General Services Administration pursuant to the request of the chairman of the House Committee on Government Operations in a letter dated May 15, 1956.

A similar request for such an inventory was made by the Senate Committee on Appropriations.

SCOPE

This inventory includes all real properties owned by the United States Government throughout the world. It is based on detailed inventory reports submitted by the participating agencies as prescribed by General Services Administration Circular No. 80, revised, dated July 3, 1956. Only overall summary figures for acres and costs have been reported by Department of Defense for its real property holdings for military functions located outside the United States.

The inventory includes real property declared to be excess to the needs of the holding agency or surplus to the needs of the United States Government. Data with respect to buildings, structures, and other facilities in process of construction are included in this inventory only if they were available for use as of June 30, 1956.

85132—56——8

The inventory excludes residential and farm properties acquired by the Federal Government through foreclosure incident to a lending operation or other Federal aid project. It also excludes property owned by the District of Columbia government.

The inventory excludes machinery, processing equipment, demountable and movable structures, and furniture and special use items, which were not considered part of the realty reported.

Properties managed by the Architect of the Capitol and those held in trust by the United States Government are not included in the summary tabulations.

The inventory does not include any lands owned by the sovereign governments of the various United States Territories and possessions. Neither does this inventory cover any lands which are administered by the United States under trusteeship by authority of the United Nations.

Cost figures shown are the actual acquisition costs, where available, and estimated costs (as of date of acquisition) where actual costs are not available. Costs include all capital improvements and such items as plumbing, elevators, heating and lighting fixtures, air-conditioning systems, etc., which are normally required for the functional use of a building. In addition, costs also include such items as safes, vaults, etc., which are built into the structure or are permanently affixed thereto.

No costs have been included in this inventory for (1) unreserved public domain; (2) public domain reserved for national parks, national forests, military installations, and other purposes; and (3) historical sites where such sites have been acquired by methods other than by purchase. However, the acreage for such lands is included in the inventory.

GENERAL SERVICES ADMINISTATION,
Washington, D. C., July 3, 1956

General Services Administration Circular No. 80, Revised.
To: Heads of Federal Agencies.
Subject: Annual Reports on Federal Real Property Holdings.

1. Purpose

This circular prescribes (*a*) annual reports necessary for the maintenance and publication of an inventory of real property owned by the United States Government as of June 30 of each fiscal year; (*b*) an initial inventory report of real property leased to the United States Government, as of July 1, 1956, and subsequent annual reports as of the beginning of each fiscal year; and (*c*) forms with detailed instructions for the preparation and submission of these inventory reports to the General Services Administration by the holding agencies.

2. Authority

The Senate Committee on Appropriations in Report No. 237, dated May 12, 1953, covering the first independent offices appropriation bill for 1954, requested the General Services Administration to compile an initial inventory of Federal real property. This inventory covered federally owned real property in the continental United States, as of December 31, 1953.

The Senate committee, in Report No. 411, dated June 2, 1955, on the first independent offices appropriation bill for 1956, requested that a second inventory report be compiled as of June 30, 1955, and as of the

end of each fiscal year thereafter. It was further requested that the inventory be expanded to cover real property owned by the United States Government in United States Territories and possessions and in foreign countries.

In Senate Report No. 2041, dated May 24, 1956, the Senate Committee on Appropriations requested the General Services Administration to expand the inventory to also cover real property leased to the United States Government.

3. Holding agency

For purposes of the inventory of real property owned by the United States Government, the holding agency is the one which has the authority to take possession of and assign and reassign such property or any portion thereof regardless of the manner in which the property was acquired or what agency is currently using the property. This is in accordance with the provisions of section 3 of Accounting Systems Memorandum No. 32, issued by the General Accounting Office on April 13, 1954.

For purposes of the inventory of real property leased to the United States Government, the holding agency is the one which currently administers the lease and makes rental payments to the lessor, regardless of which agency executed the original lease or is currently using the property.

4. Coverage

The inventories prescribed by this circular shall cover all land, buildings, and other structures and facilities located in the United States, in United States Territories and possessions, and in foreign countries, which are owned by or leased to the United States Government, or wholly owned Federal Government corporations.

(*a*) The annual reports of real property owned by the United States Government shall include (a) public domain; (b) lands reserved or withdrawn from public domain for national forests, national parks, or other purposes; (c) property in which the United States Government has a life interest; and (d) property acquired by purchase, construction, donation, and other methods of acquisition. They shall also include all buildings or structures owned by the Federal Government, whether or not located on Government-owned land. Separate annual reports shall also be submitted for real properties held in trust by the Federal Government.

The annual reports shall exclude (a) residential and farm properties acquired through foreclosure incident to a lending operation or other Federal aid project; (b) rights-of-way and easements to the United States Government; (c) leasehold improvements to land or buildings leased to the United States Government; (d) machinery and processing equipment which are not part of the realty; and (e) sovereign-owned lands of the Governments of the various United States Territories and possessions.

(*b*) The annual report of real property leased to the United States Government shall include all property leased from private individuals, organizations, municipal, county, State, and foreign governments, as evidenced by a written agreement, involving a monetary consideration and a landlord-tenant relationship. It shall also include right of use and occupancy obtained under eminent domain proceedings or equivalent procedures.

It shall exclude easements, rights-of-way, and encroachments. It shall also exclude real property occupied under permit or other arrangements with other Federal Government agencies or wholly owned Federal Government corporations.

Examples of properties to be excluded are (a) space and land made available to the Federal Government rent free or for token payment, such as rooms in local courthouses, county buildings, universities, etc.; and (b) land upon which the Government has a right to place power transmission lines, gaging stations, fire lookout towers, revetments, etc.

5. Reports to be submitted

(*a*) *Inventory of real property owned by the United States Government.*—Each holding agency shall prepare, in accordance with the instructions in attachment 1a, and submit to the General Services Administration a separate report on GSA Form 1166, Annual Report of Real Property Owned by the United States Government (attachment 1), for (a) each newly acquired installation, (b) each installation with increases or decreases, (1) of $1,000 or more affecting any line item or the total for the installation, or (2) in acreage, irrespective of costs, which have occurred since the submission of the previous report. Reports may also be submitted to revised items previously reported.

In the case of changes under "(b)" above, an adjusted report shall be submitted covering the entire installation. This adjusted report shall show the combined result of (a) amounts reported for the entire installation in the previous inventory report, (b) plus acquisitions, due to purchase, construction, etc., (c) minus dispositions due to sale, destruction, transfer, etc., and (d) plus or minus corrections of errors or omissions in the previous report.

Each holding agency also shall prepare and submit to the General Services Administration, for each bureau or other major organizational unit, a report on GSA Form 1209, Summary of Number of Installations Owned by the United States Government (attachments 2 and 2a), regardless of whether or not changes have occurred since the previous report. Separate reports on GSA Form 1209 shall be submitted for properties (a) in the United States, and (b) outside the United States.

The annual inventory reports (GSA Forms 1166 and 1209) shall be submitted as of the end of each fiscal year. An original and one copy of these reports shall be submitted to the General Services Administration, Office of the Comptroller, Washington 25, D. C., not later than September 1, after the close of the fiscal year.

Whenever possible, data reported shall be based on detailed real property records and related documents in the holding agency's files. Where such records or documents are not available, estimated data, so identified, may be used. However, as soon as practicable, detailed real property records (and related documents) shall be established and maintained on a current basis by the holding agencies.

(*b*) *Inventory of real property leased to the United States Government.*—Each holding agency shall prepare and submit to the General Services Administration a report of its leased real property holdings as of July 1, 1956, and as of the beginning of each fiscal year thereafter, on GSA Form 1166A, Annual Report of Real Property Leased to United States Government (attachment 3), in accordance with the instructions in attachment 3a.

Each holding agency also shall prepare and submit to the General Services Administration, for each bureau or other major organizational unit, a report on GSA Form 1209A, Comparative Summary of Properties Leased to the United States Government (attachment 4). Separate reports on GSA Form 1209A shall be submitted for properties (a) in the United States and (b) outside the United States. Instructions for the preparation of this form are set forth in attachment 4a.

An original and two copies of each report shall be submitted annually to the General Services Administration, Office of the Comptroller, Washington 25, D. C., not later than September 15, after the beginning of the fiscal year.

(*c*) *Optional reporting method.*

Agencies which have electrical accounting machine equipment may make arrangements with the General Services Administration, Office of the Comptroller, to furnish detailed machine listings, together with the supporting punch cards, in lieu of GSA Forms 1166, 1209, 1166A, and 1209A.

6. Supplies of forms

GSA Forms 1166, 1209, 1166A, and 1209A may be obtained from the General Services Administration, Office of Management, Administrative Facilities Division, Printing and Distribution Section, 7th and D Streets SW., Washington 25, D. C., telephone: Republic 7–7500 (Government dial code 151), extension 6453.

7. Agency liaison

Each holding agency which has not done so shall designate an official to serve as agency representative on this real property inventory. The same representative may be designated, if desired, for the United States Government-owned and the leased real property inventories. The General Services Administration, Office of the Comptroller, Washington 25, D. C., shall be advised in writing of the names of all such representatives or any changes in such designation.

8. Inquiries

For additional information regarding the content of this circular, or any questions or problems relating thereto, agency representatives may communicate with the General Services Administration, Office of the Comptroller, Washington 25, D. C., telephone: Executive 3–4900 (Government dial code 156), extension 4131.

JUNE 1958

Attachment 1a

INSTRUCTIONS FOR THE PREPARATION OF GSA FORM 1166, ANNUAL REPORT OF REAL PROPERTY OWNED BY UNITED STATES GOVERNMENT

A. GENERAL INSTRUCTIONS

1. Preparations of reports

GSA Form 1166, Annual Report of Real Property Owned by United States Government, shall be prepared by all holding agencies as of the close of each fiscal year. This report shall cover—

(*a*) Each newly acquired real property installation.

(*b*) Each installation previously reported to which increases or decreases (1) of $1,000 or over, affecting any line item or the total for the installation, or (2) in acreage, irrespective of costs, which have occurred since the submission of the previous report. Reports may also be submitted to revise items previously reported.

In the case of changes under (*b*) above, an adjusted report shall be submitted covering the entire installation. This adjusted report shall show the combined results of (*a*) amounts reported for the entire installation in the previous inventory report, (*b*) plus acquisitions, due to purchase, construction, etc., (*c*) minus dispositions due to sale, destruction, transfer, etc., and (*d*) plus or minus corrections of errors or omissions in the previous report.

Reports shall not be submitted for the installations having no changes since the submission of previous reports.

2. Holding agency

For purposes of this inventory of real property owned by the United States Government, a holding agency is one which has the authority to take possession of and assign and reassign such property or any portion thereof regardless of the manner in which the property was acquired or what agency is now using the property. Examples of a holding agency, as shown in GAO Accounting Systems Memorandum No. 32, follow:

(*a*) For an office building or warehouse occupied by a Federal agency or agencies, upon determination by GSA, and for which GSA is responsible for elevator and guard service and for cleaning and maintenance, GSA is the holding agncy.

(*b*) In case of special purpose buildings, such as Coast Guard stations, military reservations, hospitals, and prisons, those agencies or bureaus thereof having control of building management and operations, including authority to assign or reassign space in such buildings, will be considered as the holding agencies.

Under provisions of GSA Regulations, Title 2, Real Property Management, a holding agency is responsible for the custody of and accountability for its real property, including those which have been declared excess or surplus. Consequently, the holding agency shall continue to report such excess or surplus property as provided herein until a final report is submitted after official documentation has been received indicating (*a*) that the installation has been permanently transferred to another Federal agency; or (*b*) that it has been completely disposed of by sale or other disposal method.

3. Reporting entity

An installation, such as a national forest or park, military reservation, hydroelectric project, etc., shall be considered as an individual reporting entity and shall be the subject of a single report, except for those installations located in more than one State. In the case of an installation located in more than one State, the portion located in each State shall be made the subject of a separate report, and thus shall be treated as a separate installation for purposes of this inventory. Each such report shall include all land, buildings, and other structures and facilities of an installation within a State.

In other cases, where a building and the site thereof, such as an office building, courthouse, post office, warehouse, etc., are all that comprise an installation, the property shall be considered as an individual reporting entity and shall be the subject to a single report. This same procedure shall be followed in the case of individual areas of improved or unimproved land.

4. Construction in process

Buildings, structures, and other facilities in process of construction shall be reported only "if available for service" as of the reporting date. However, sites acquired for such purposes, or for new projects, shall be reported regardless of whether or not the buildings, structures, or facilities are available for service. The usage classification of such sites shall be based on the intended use of the construction, whether or not in process.

5. Fixtures and equipment

For purposes of this report, the cost of buildings, structures, and other facilities shall also include the cost of such fixtures and equipment as are normally required for the functional use of the facility. For example, plumbing, heating, and lighting fixtures, elevators, air conditioning systems, as well as items, such as safes, vaults, etc., which are built into the structure or are permanently affixed thereto, the removal of which would materially damage the structure. However, the cost of all machinery and processing equipment, as well as furniture and special use items, which are not part of the realty, shall be excluded.

6. Easements and leasehold improvements

The inventory of real property owned by the United States Government covers only real property "title to which is vested in the United States or in wholly owned Government corporations."

Consequently, the cost of easements, rights-of-way, and leasehold improvements to land, buildings, or structures, and facilities occupied by the Government as lessee shall be excluded. However, the cost of federally owned buildings, structures, and facilities located on leased land shall be included.

7. Utility systems

Where federally owned utility systems, such as gas, water, electric (power and light), sewer (storm and sanitary), etc., serve a single building, which is reported separately, the cost of such utility systems shall be included in the cost of the building. Where these systems (including water treatment, sewage-disposal plant, etc.) serve several buildings and structures, their cost shall be reported under other structures and facilities.

8. Excess and surplus real properties

GSA Real Property Management Regulations, title 2, require that each holding agency having control of excess and surplus real property shall retain accountability therefor until official written notice is received of the transfer or sale of such property. Accordingly, all excess and surplus real property, for purposes of this inventory, shall be reported by the holding agency as provided in section 2, above, regardless of whether the property is (*a*) occupied by the holding agency, (*b*) on loan to another agency, or (*c*) being disposed of by another agency

In case a holding agency has been officially advised that a portion of an installation (which had been determined to be excess or surplus) has been transferred or sold since the inventory date of the previous report, it shall submit an adjusted report on GSA Form 1166, covering the remainder of the installation retained by the holding agency.

Similarly, a report shall be submitted by the former holding agency on GSA Form 1166, where an entire installation has been transferred or sold since the inventory date of the previous report. However, in such a case, the only entries required shall be the identifying data, called for in blocks 2 through 10, and an appropriate notation in block 26 "Remarks," regarding the transfer or sale of the installation.

Upon the official advice of the transfer of excess property between Federal agencies, the recipient agency shall report such transfer as newly acquired property. For purposes of this inventory, the recipient agency shall use the original cost, adjusted for subsequent changes, and other pertinent data pertaining to the installation based on the records of the transferring agency. Estimates shall be made, as required, when the records of the transferring agency are incomplete.

In the case of an installation previously reported which has had no changes since the previous report, but where changes (increases or decreases) have occurred in the excess or surplus status of the installation, in whole or in part, a report on GSA Form 1166 shall also be submitted. However, the only entries required shall be the identifying data called for in blocks 1 through 10, and an appropriate notation in block 26, "Remarks," regarding the change to the excess or surplus status.

9. Change in name of installation

In the case of an installation previously reported, where the only change is that in the name of the installation, a report on GSA Form 1166 shall be submitted. However, entries shall be made only for the identifying data called for in blocks 1 through 10, using the new name in block 4. An appropriate notation shall also be made under block 26, "Remarks," indicating the change in name of the installation, including the name previously used.

B. SPECIFIC INSTRUCTIONS FOR PREPARATION OF GSA FORM 1166

1. Agency and property identification

Block 1. Enter the effective date of the report.

Block 2. *Holding agency number.*—For the purpose of identification, each agency shall assign a holding agency number to each installation for which a separate report is submitted. If attachments are necessary, such attachments shall be identified by the same number.

Where a report reflects a change to an installation, which has been previously reported, the agency shall enter the same holding agency number used in the previous report.

Where a newly acquired installation is reported, the agency shall assign a new holding agency number to said property.

Block 3. *GSA control number.*—If the report is for an installation previously reported, the holding agency shall fill in the "GSA control number" for that installation, using the same control number shown on the GSA machine listing of installations, as of the latest inventory furnished to each reporting agency by the General Services Administration. It is essential that this GSA control number be filled in by the reporting agency so that the current report can be identified with the corresponding report previously submitted.

Where an installation is reported for the first time, this block shall *not* be filled in by the reporting agency.

Block 4. *Name of property.*—Enter the name assigned to the installation or facility being reported, such as United States Customshouse, Fort Bragg, Yellowstone National Park, Rock Island Arsenal, etc. In case an installation is located in more than one State, a separate report is required to cover the portion of the installation located in each State. In such case, the name of the State shall be entered in this block after the name of the property.

Block 5. *Holding agency.*—Enter in this block the name of the holding agency; that is, the department, commission, administration, or authority. For example: Department of Commerce, Atomic Energy Commission, Veterans' Administration, or Tennessee Valley Authority.

Block 6. *Bureau or other major organization.*—Enter in this block the name of the reporting bureau, or other comparable major organizational unit, within the holding agency. For example: National Bureau of Standards (Commerce), Bureau of Land Management (Interior).

Block 7. *State or country.*—Enter the name of the State, United States Territory or possession, or foreign country in which the real property is located. Where an installation is located in more than one State, a separate report shall be submitted to cover the portion of the installation located in each State.

Block 8. *City.*—Enter the name of the city, or town (where appropriate), in which, or near which, the property is located, provided the nearby city is located in the same State, United States Territory, possession, or foreign country entered in block 7; otherwise, do not fill in this block.

Block 9. *County.*—Enter the county or counties, parish or parishes, in which the reported property is located. (Separate reports for each county are not required.) If space is insufficient, complete the list under "Remarks," block 26, or on a separate sheet attached to the report.

Block 10. *Street address.*—Enter the street address, where appropriate.

2. Land

Block 11. *Usage code and classification.*—Enter in this block the *present predominant use and related code* of the land area or site being reported. A breakdown of miscellaneous secondary usages is not required. If there are *significant* secondary usages, mention thereof should be made under "Remarks," block 26.

In the case of an installation comprised of both Government-owned and trust lands, separate reports on GSA Form 1166 shall be prepared for each.

Enter one of the following usage codes and classifications in blocks 11A and 11B, respectively, as appropriate:

Code	*Classification*	*Code*	*Classification*
01	Agricultural	16	Reclamation and irrigation
04	Grazing	18	Flood control and navigation
07	Forest and Wildlife	19	Vacant
08	Parks and historic sites	20	Institutional
10	Office building locations	30	Housing
11	Military (except airfields)	40	Storage
12	Airfields	50	Industrial
13	Harbor and port terminals	80	Other land
15	Power development and distribution	99	Trust land

The above usage codes and classifications shall be used exclusively by all agencies for purposes of reporting land on GSA Form 1166.

If land is (a) leased, (b) held under permit, or (c) jointly held and another agency is reporting such land, so state in this block. Give additional details in block 26, if necessary. However, no entries shall be made in blocks 12–16, when land is held under these conditions.

Block 12. *Acquisition code.*—Enter the code number for the method or methods of acquisition of the property being reported. The codes to be entered in this block are as follows:

Code	*Method of acquisition*
1	Public domain (applicable only in United States and Alaska)
2	Purchase, transfer, donation, etc.
3	Life interest (applicable only in the Canal Zone and foreign countries)

Include under code 1, all public domain lands including those acquired by transfer from public domain. Include under code 2, any land acquired by purchase, transfer, donation, and other methods of acquisition (other than transfer from public domain and life interest). Include under code 3, all real property in which the United States Government has a life interest, such as those acquired by treaty or long term lease, (e. g., 99 years, in perpetuity, etc.) and which the holding agency, as a matter of policy, considers as the equivalent to being owned by the United States.

Block 13. *Date(s) acquired.*—Enter the year in which the land was originally acquired by the Federal Government for each method of acquisition set forth in block 12. If various portions were acquired at different dates, indicate the dates or range thereof, such as "1910–1921".

Block 14 and 15. *Area—Urban and rural.*—Entries shall be made in acres to the nearest tenth of an acre. If acres are to be reported as a whole figure, enter "0" to the right of the decimal, e. g., 10.0.

Urban.—For purposes of this report, land shall be classified as urban when (*a*) located in an incorporated place of 2,500 or more, (*b*) in a densely settled unincorporated place of 2,500 or more, or (*c*) in a densely settled urban fringe area around cities of 50,000 or more. (Reference: United States Summary and Maps in vol. I of the 1950 Population Census which lists urban places in each State.)

Enter in this block the area of urban land acquired by each type of acquisition reported in block 12.

Rural.—Classify as rural all properties not classified as urban. Enter in this block the area of rural land for each type of acquisition reported in block 12.

Block 16. *Cost.*—Enter the cost (in thousands of dollars) of the land for each entry in block 12, except for (*a*) properties held in trust, (*b*) public domain, (*c*) lands reserved or withdrawn from public domain for national forests, national parks, or other purposes, and (*d*) land acquired for historical sites other than by purchase.

Costs need not be reported for acquired lands which are intermingled with public domain lands and which constitute a relatively minor portion thereof.

The cost of sites for monuments, memorials, and statues shall be reported, except for sites of the types described in the two preceding paragraphs.

The cost of the following items, incidental to the acquisition or preparation of land for use, should generally be included in the cost of the land:

Cost of land
Appraisal
Clearing
Damage to property of others
Drainage
Grading
Landscaping
Legal fees and expenses
Plats and surveys
Removal and relocation of the property of others as part of purchase contract
Removal of structures or facilities purchased but not used

However, land improvements to public domain lands shall be reported under "Other structures and facilities," blocks 23 and 24.

If cost is less than $500, enter cost as "0." If cost is $500 or over, round to the next higher thousand. For example: if records indicate a cost of $500, round to "1"; similarly, enter "1" for cost of $1,200. If records for acquisition costs are not available, enter estimated costs and so indicate by the notation "EST" after the amount. Such estimates shall be based on costs at date of original acquisition by the Government, as adjusted by subsequent changes.

Estimate, if not known, the "cost" of property acquired through donation, devise, forfeiture, or judicial process. This estimated "cost" should represent the amount the Government would have had to pay for the land, if purchased, at the date of original acquisition.

3. Buildings

Block 17. *Usage—classification.*—For purposes of this report, the *present predominant use* of a building shall govern its classification. A temporary building (not demountable) on a concrete foundation shall be reported. However, exclude temporary buildings set up expressly for construction purposes.

In the case of properties comprised of both Government-owned and trust buildings, a separate report on GSA Form 1166 shall be prepared for the trust buildings. Data called for in blocks 20, 21, and 22 shall not be reported for properties held in trust by the reporting agency.

Buildings shall be classified on the basis of the following usage categories:

Block 17. (*10*) *Office.*—Buildings used primarily for office or other administrative purposes. If a small segment of the total area of a building is used for other than office purposes, no attempt should be made to segregate such space. Such a building shall be classified as an "office" building.

Block 17. (*21, 22, 23, and 29*) *Institutional.*—Buildings devoted to institutional uses, such as hospitals, prisons, schools, libraries, chapels, and museums. Do not include minor emergency or health rooms, chapels, libraries, etc., which constitute only a small portion of a building used primarily for other purposes. Report information on lines 21, 22, 23, and 29, respectively, designated for hospitals, prisons, schools, and "other institutional buildings." The latter shall include institutional buildings, such as libraries and museums.

Block 17. (*30*) *Housing.*—Buildings used primarily for dwelling purposes, such as apartment houses, single or row houses, and barracks. Include public housing, housing for military personnel, housing for institutional personnel, and housing built primarily for personnel in various Federal agencies.

Block 17. (*40*) *Storage.*—Buildings used for storage purposes, such as warehouses, ammunition storage, and cover sheds. Also include in this category garages used primarily for storage of vehicles or materials. Do not include such facilities as water reservoirs and oil storage tanks, which are to be reported as "Other structures and facilities," block 23.

Block 17. (*50*) *Industrial.*—Buildings specifically designed and used primarily for production, manufacturing, or developmental purposes. Include in this category, buildings used for the production or manufacture of ammunition, aircraft, ships, vehicles, electronic equipment, chemicals, aluminum, magnesium, etc., as well as power or fuel producing facilities, such as steam, gas, and petroleum refinery facilities. Also include in this category laboratories and testing facilities used for industrial purposes. Exclude testing laboratories of a nonindustrial nature.

Block 17. (*60*) *Service.*—Buildings used in connection with service activities, such as maintenance and repair shops, laundry and dry cleaning plants, post exchanges, stores, garages (used primarily for vehicle maintenance and repair) and airport hangars.

Block 17. (*80*) *All other.*—Buildings which cannot be classified elsewhere.

Block 17. (*99*) *Trust buildings.*—All buildings held in trust by the reporting agency.

Block 18. *Number of buildings.*—Enter the number of buildings for each usage classification reported in block 17.

Block 19. *Date(s) acquired.*—Enter the date the building was originally acquired by the Federal Government. In cases where several buildings of the same classification were acquired at different dates and are being reported on a single line, indicate the period of acquisition, such as "1930–1942."

Block 20. *Floor area, total square feet.*—Enter the total gross floor area (applies to outer dimensions of the building) in square feet, for each class of building reported. However, floor area shall not be reported for buildings held in trust. Include the total floor area of the

85132—56——9

building(s), regardless of any secondary usages, including those areas used under permit or other arrangements by other occupying agencies.

Block 21. *Floor area, percent occupied.*—Enter the estimated percentage of occupancy or use for each class of building reported in block 17. However, percent occupied shall not be reported for buildings held in trust by the reporting agency.

Block 22. *Cost.*—Enter in this block the total cost (in thousands of dollars) for each class of building reported. However, cost shall not be reported for buildings held in trust by the reporting agency. Costs shall include the cost of any capital improvements (additions or betterments) incurred subsequent to date of original acquisition by the Government.

If the cost is less than $500, enter cost as "0." Round other cost entries to nearest thousand as described for block 16, above.

In the absence of any recorded data as to costs, they shall be estimated and so noted by "EST" after the amount. Such estimates shall be based on costs at date of original acquisition by the Government and not on current costs.

Estimate, if not known, the "cost" of the buildings acquired through donation, exchange, devise, forfeiture, or judicial process. This estimated "cost" should represent the amount the Government would have had to pay for the buildings, if purchased, at the date of original acquisition.

4. Other structures and facilities

Block 23. *Description.*—The various usage categories are preprinted in this block. The coverage of each of these usage categories follow:

Code	*Classification*
13	*Harbor and port facilities.* Include docks, piers, jetties and breakwaters situated on federally owned land.
15	*Power development and distribution.* Include hydroelectric and other power development projects, generally consisting of dams, powerhouses, etc. Transmission lines which are an integral part of Federal power development systems shall also be included even though the power is produced by another Federal agency.
16	*Reclamation and irrigation.* Include canals, laterals, pumping stations, storage and diversion dams, etc.
18	*Flood control and naviation.* Include river improvements, revetments, dikes, docks, navigational aids, etc., situated on federally owned land.
40	*Storage (other than buildings).* Include storage tanks, silos, igloos, underground vaults, open storage areas (improved only), etc.
50	*Industrial.* Include facilities other than buildings used for production, manufacturing, or developmental purposes, such as sliding shipways, retaining basins, pipelines, etc.
71	*Utility systems (heating, sewage, water, and electrical systems).* Under this category, heating, sewage, water, and electrical systems are reported when they serve several buildings and structures of an installation. Where they serve a single building, which is reported separately, the cost of such utility systems shall be included in the cost of the building. This usage category for "utility systems" includes heating plants and related steam and gas lines; sewage-disposal plants, storm and sanitary sewer lines; water-treatment plants, wells, pumphouses, reservoirs, and pipelines; and, electrical substations, standby or auxiliary powerplants, lighting structures, and conduits.
72	*Communication systems.* Include telephone and telegraph lines, radio towers, etc.
76	*Roads and bridges.* Include federally owned highways, roads, related culverts and connecting bridges. Also include roads within national parks and forests and other Federal institutions.

Code	Classification
77	*Railroads.* Include tracks and bridges, tunnels, fuel and water stations, etc., servicing railroads.
78	*Monuments and memorials.* Includes all Federal monuments, memorials, and statues.
79	*Miscellaneous military facilities.* Include all structures and facilities of the Department of Defense (military functions) not included in any other classification.
80	*Other.* Include sidewalks, parking areas, fences, trails, etc., which cannot be readily classified under the above categories.
99	*Trust structures and facilities.* Include all structures and facilities held in trust by the reporting agency.

Block 24. *Costs.*—Enter in this block the total cost (rounded to the nearest thousand dollars) opposite each applicable usage category listed in block 23.

Costs shall include the cost of any capital improvements (additions or betterments) incurred subsequent to the date of acquisition.

Costs shall not be reported in the case of (a) other structures and facilities held in trust, (b) historic structures, and (c) monuments, memorials and statues.

In the absence of any recorded data as to such costs, they shall be estimated and so noted by "EST" after the amount. Such estimates shall be based on costs at date of original acquisition by the Government, adjusted for subsequent changes, and not on current costs.

Estimate, if not known, the "cost" of structures and facilities acquired through donation, exchange, devise, forfeiture, or judicial process. This estimated "cost" should represent the amount the Government would have had to pay for the structures or facilities, if purchased, at the date of original acquisition.

Block 25. *Total Cost: Land, buildings, other structures and facilities.*—Enter the sum of the totals of blocks 16, 22, and 24.

5. Remarks

Block 26. If it is necessary to clarify or expand any entries beyond the space provided in the various blocks, make such notations in this block, or on the reverse of the form.

Indicate in this block, whether or not the installation being reported is being used by other than the reporting agency.

In the event that an installation being reported on GSA Form 1166 is considered as excess, in whole or in part, to the needs of the reporting agency, suitable notation shall be made in this block. This notation should indicate whether such installation, or portion thereof, has been or is being reported as excess to the General Services Administration or has been determined to be surplus, in accordance with the provisions of GSA Regulations, title 2, on Real Property Management.

6. Transaction code

Block 27. *Transaction code.*—Enter in this block the appropriate transaction code number. This code number reflects the nature of the real property change for each installation between the current and the prior inventory report. Where practicable, include in block 26, "Remarks," a short notation giving an explanation of the change. The transaction code number and description follow:

Code	*Description*
1	*New acquisition.* Include newly acquired installations obtained by purchase, construction, etc. Partial additions to installations previously reported shall be included under transactions code 4, below.
2	*Omission.* Include only those installations which were erroneously omitted from the inventory for the prior fiscal year.
3	*Dispositions.* Include installations completely disposed of through sale, donation, exchange, or other disposition to private citizens and organizations or to State and local governments.
4	*Revisions.* Include all changes not covered by one of the above transaction codes. This includes partial acquisitions or dispositions to installations previously reported, capital improvements, writeoffs, corrections to prior year's reports, etc. Also include inter-agency and intra-agency transfers.

Block 29. *Signature.*—The official designated in block 28 shall sign his name in this block.

Block 30. Enter date on which the report was prepared.

Attachment 2a (See page 126)

INSTRUCTIONS FOR PREPARATION OF GSA FORM 1209 SUMMARY OF NUMBER OF INSTALLATIONS OWNED BY THE U. S. GOVERNMENT

A. GENERAL INSTRUCTIONS

This "Summary of Number of Installations Owned by the United States Government," shall be prepared on GSA Form 1209 by each holding agency for each bureau or other organizational unit, whether or not such agency is required to submit GSA Form 1166 for its real property. A separate GSA Form 1209 shall be prepared covering (*a*) properties in the United States, and (*b*) properties outside the United States, for each bureau or other comparable major organizational unit, where appropriate. An original and one carbon of these forms shall be submitted to the General Services Administration by September 1, as of the close of each fiscal year, accompanied by the related GSA Forms 1166, where appropriate. The GSA Form 1209 is intended to provide a reconciliation between the number of installations previously reported and the number of installations as of the new inventory date, to avoid omissions or duplications in the inventory.

B. SPECIFIC INSTRUCTIONS FOR THE PREPARATION OF THIS SUMMARY

1. Summary identification

Place a check mark in the appropriate box to indicate whether the accompanying GSA Forms 1166 cover properties in the United States or outside the United States. Complete the fiscal year date of the report.

2. Holding agency

Enter in this block the name of the holding agency, that is, the department, commission, administration, or authority. For example: Department of Commerce, Atomic Energy Commission, Veterans Administration, or Tennessee Valley Authority.

3. Bureau or other major organizational unit

Enter on this line the name of the bureau or other comparable major organizational unit within the holding agency. For example: National Bureau of Standards (Commerce), Bureau of Land Management (Interior), etc.

4. Line Entries

Line 1. Enter on this line the number of installations previously reported, as of the end of the prior fiscal year. This number must agree with that shown in the detailed machine listings of the previous inventory reports, copies of which have been furnished by the General Services Administration to each holding agency.

Line 2. Enter on this line (in both columns) the number of installations previously reported, which have been completely disposed of since the submission of the previous report.

Line 3. Enter on this line (in both columns) the number of reports (GSA Forms 1166) affecting installations previously reported and remaining in the inventory for which changes have occurred during the fiscal year.

Line 4. Enter on this line the number of installations previously reported, which have had no changes requiring the submission of a revised GSA Form 1166.

Line 5. Enter on this line (in both columns) the number of reports for newly acquired installations not previously reported to the General Services Administration by the present holding agency.

Date.—Enter date on which the report was prepared.

Attachment 3a (See page 128)

INSTRUCTIONS FOR THE PREPARATION OF GSA FORM 1166A ANNUAL REPORT OF REAL PROPERTY LEASED TO U. S. GOVERNMENT

A. GENERAL INSTRUCTIONS

1. Preparation of reports

GSA Form 1166A. Annual Report of Real Property Leased to United States Government shall be prepared by all holding agencies, covering their leased real property as of July 1, 1956, and as of the beginning of each fiscal year thereafter. This report shall include all real property leased to the United States Government from private individuals and organizations, and from municipal, county, State, and foreign governments, as evidenced by a written agreement involving a monetary consideration and a landlord-tenant relationship. It shall also include right of use and occupancy obtained under eminent domain proceedings or equivalent procedures.

This report shall exclude easements, rights-of-way, and encroachments. It shall also exclude real property occupied under permit or other arrangements with other Federal Government agencies or wholly owned Federal Government corporations.

Examples of properties to be excluded are (*a*) space and land made available to the Federal Government, rent free, or for token payment, such as rooms in local courthouses, county buildings, universities, etc.; and (*b*) land upon which the Government has a right to place power transmission lines, gaging stations, fire lookout towers, revetments, etc.

2. Holding Agency

For purposes of the inventory of leased properties, the holding agency is the one currently administering the lease and making rental payments to the lessor, regardless of which agency made the original lease or is currently using the property.

3. Reporting Entity

Real property leased to the United States shall be reported in the following manner:

a. *Land and improvements.*—An installation consisting of land and several buildings, such as a supply depot, a consulate, etc., shall be considered as an individual reporting entity, except where the installation is located in more than one State. In the case of an installation located in more than one State, the portion located in each State shall be considered as an individual reporting entity.

b. *Land only.*—An installation may consist of land only. This category includes unimproved leased lands, as well as leased land upon which federally owned buildings or other improvements have been constructed or are under construction. (The Federal agency controlling buildings and other structures owned by the U. S. Government on leased land shall report them on GSA Form 1166.) An installation consisting of land only shall be reported as follows:

(1) Each installation consisting of land only, located in the United States, with an annual rental of $500 or over, shall be considered an individual reporting entity, and the subject of a separate report.

(2) Each installation consisting of land only, located outside of the United States, regardless of the annual rental rate, shall be considered as an individual reporting entity, and the subject of a separate report.

(3) Each installation consisting of land only, located in the United States, with an annual rental of less than $500, may be combined in a single report with all similar installations within (*a*) a regional area within a State, or (*b*) each State, without regard to regional areas; except for leased land located in the major cities set forth in attachment 5. (See item (4) below.) This type of installation shall be combined either on a statewide or regionwide within the State basis, except for property located in the major cities.

(4) Each installation consisting of land only, located in the major cities in the United States (see attachment 5), with a rental rate of less than $500 per annum, shall be combined with all similar leases for land located in the same city.

(*c.*) *Lease-purchase property.*—Buildings constructed under each lease-purchase agreement shall be considered as leased property and be the subject of a separate report during the life of the lease. When the last payment is made and title is transferred to the Federal Government such real property shall then be excluded from this report and included in the report on federally owned real property.

(*d.*) *Buildings and portions thereof.*—Leases for buildings or portions of buildings shall be reported, as follows:

(1) Each lease executed for a single building, or portion of a building, located in the United States, such as an office building, post office, or warehouse, with an annual rental of $2,000 or over, shall be considered an individual reporting entity and the subject of a separate report.

(2) Each lease executed for a single building, or portion of a building, located outside of the United States, regardless of the annual rental rate, shall be considered as an individual reporting entity, and the subject of a separate report, except for a lease for a billet. Each lease for a single residential unit in one city with one landlord with an annual rental of $2,000 or less may be combined with similar leases with the

same landlord in the city and may be considered as a single reporting entity, and the subject of one consolidated report.

(3) Each lease executed for buildings, or portions of buildings, located in the United States, with an annual rental rate of less than $2,000 per annum, may be combined in a single report with all similar leases within (1) a regional area located in the State, or (2) the State without regard to regional areas, except for leased properties located in the major cities set forth in attachment 5. (See item (4) below.) This type of leased space shall be combined either on a statewide or regionwide within the State basis, except for property located in the major cities.

(4) Each lease for buildings, or portions of buildings, which are located in the major cities in the United States (see attachment 5), at rental rates of less than $2,000 per annum, shall be combined with all similar leases for property located in the same city.

When GSA Form 1166A, Annual Report of Real Property Leased to United States Government contains a consolidation of several leases, the agency files shall have data readily available showing the identification of each individual leased property. This data shall be made available to GSA representatives, when required.

B. SPECIFIC INSTRUCTIONS

1. Date, Agency, and Property Identification

Block 1. Enter effective date of the report.

Block 2. *Holding agency number.*—For the purpose of identification each agency shall assign a number for each report submitted.

Block 3. *GSA control number.*—Leave this space blank. For use by General Services Administration only.

Block 4. *Name of property.*—Enter the commonly used name for the property being reported, such as United States post office, American Embassy, Wilkins Building, etc.

Block 5. *Holding agency.*—Enter the name of the holding agency; that is, the controlling department, commission, administration, or authority. For example: Department of Commerce, Atomic Energy Commission, Veterans' Administration, or Tennessee Valley Authority.

Block 6. *Bureau or other major organization.*—Enter the name of the reporting bureau, or comparable major organizational unit, within the holding agency; for example, National Bureau of Standards (Commerce), Bureau of Land Management (Interior).

2. Location

Block 7. *State or country.*—For leased property located in the United States, enter the name of the State in which the real property is located. (Where an installation is located in more than one State, a separate report shall be submitted to cover the portion of the installation located in each State.)

For leased property located outside the continental limits of the United States, enter the name of the United States Territory or possession, or the name of the foreign country in which the property is located.

Block 8. *City.*—Enter the name of the city, or town (where appropriate), in which or near which the property is located, provided the

nearby city is located in the same State entered in block 7. Otherwise, do not fill in this block.

Block 9. *County.*—Enter the county or counties, parish or parishes in which the reported property is located. (Separate reports for each county in the same State are not required.) If space is insufficient, complete the list under "Remarks," block 25, or on a separate sheet attached to the report.

Block 10. *Street address.* Enter the street address, where appropriate.

3. Land

Block 11. *Usage code.*—Enter in this block the *present predominant use and related code* of the land area or site being reported. A breakdown of secondary usages is not required.

The usage codes and classifications applicable to the federally-owned real property, defined in attachment 1a, shall be used exclusively by all agencies for purposes of reporting leased land on this form.

Blocks 12 and 13. *Area—Urban and rural.*—Land will be reported only when specifically provided for in a lease. Easements, rights-of-way, and encroachments will be excluded. Enter the total acreage for each usage code reported in block 11, rounded off to the nearest tenth of an acre. If the acreage to be reported is a whole number, enter "0" to the right of the decimal, e. g., 10.0.

Urban.—For purposes of this report, land shall be classified as urban when (*a*) located in an incorporated place of 2,500 or more, (*b*) in a densely settled unincorporated place of 2,500 or more, or (*c*) in a densely settled urban fringe area around cities of 50,000 or more. (Reference: United States Summary and Maps in vol. I of the 1950 Population Census, which lists urban places in each State.) Enter in this block the total acreage of urban land acquired for each usage category reported in block 11.

Rural.—Classify as rural all properties not defined immediately above as urban. Enter in this block the total acreage of rural land for each usage category reported in block 11.

4. Buildings

Block 14. *Usage code and classification.*—For purposes of this report, the *present predominant use* of the space in each leased building shall govern its classification.

Leased buildings shall be classified on the same basis as federally owned buildings, except for post offices. Buildings or portions of buildings leased for use as post offices should be reported under code 14 "Post office." Applicable definitions of all usage categories, other than post offices, are contained in attachment 1a.

Block 15. *Number of locations.*—Enter the number of building locations for each usage classification reported in block 14.

Block 16. *Floor area leased—Total square feet.*—Enter the square feet of floor area under lease for each class of building reported. Include the total floor area under lease, regardless of any secondary usages and areas used by other occupying agencies under permit or other arrangements.

5. Other structures and facilities

Blocks 17 and 18. *Usage code and classification.*—In block 18, check appropriate usage code and classification listed in block 17 for each type of structure and other facility leased for use. Descriptions of usage codes and classifications listed in block 17 will be found in attachment 1a.

6. Lease terms

When the report covers a single lease, entries shall be made in blocks 19 through 24.

When a consolidated report is made covering several leases within the same installation, State, or city, entries shall be made only in blocks 19 and 24.

Block 19. *Number of leases reported.*—Enter the number of leases included in this report.

Block 20. *Type.*—For purposes of this report, leases are classified in two categories, described below. Enter the appropriate code number in block 20.

Code	*Category*
1	Lease-purchase
2	All other

Block 21. *Effective date.*—Enter the numerical designation for the month and year that the lease became effective, i. e., 6–1941, for June 1941.

Block 22. *Expiration date.*—Enter the numerical designation for the month and year that the lease will terminate, i. e., 12–1959, for December 1959.

Block 23. *Period renewal option.*—When the lease agreement provides that the United States Government may renew the lease at the expiration thereof, enter the renewal period rounded off to the nearest whole year. If there are no renewal provisions or if the renewal provisions are for less than 6 months, enter "None."

Block 24. *Annual rental.*—Enter the annual rental to the nearest whole dollar for the leased property. Where the rental is paid on a monthly, daily, or any other than annual basis, convert to an annual basis.

7. Remarks

Block 25. *Remarks.*—If it is necessary to clarify or expand any entries beyond the space provided in the various blocks, make such notations in this block and continue, as necessary, on the reverse of the form.

8. Signature and date

Block 26. *Prepared by.*—Type in the name and title of the official responsible for the preparation of the report.

Block 27. *Signature.*—The official designated in block 26 shall sign his name in this block.

Block 28. *Date.*—Enter date on which the report was prepared.

Attachment 4a

Instructions for the Preparation of GSA Form 1209A Comparative Summary of Properties Leased to the United States Government

A. GENERAL INSTRUCTIONS

This Comparative Summary of Properties Leased to the United States Government shall be prepared on GSA Form 1209A by each holding agency for each bureau or comparable major organizational unit. A separate GSA Form 1209A shall be prepared covering leased real property (*a*) in the United States and (*b*) outside the United States. An original and two copies of this form shall be submitted to the General Services Administration by September 15, as of the beginning of each fiscal year, accompanied by the related GSA Forms 1166A. The GSA Form 1209A is intended to provide (*a*) control over individual inventory reports on leased properties submitted on GSA Form 1166A for the current year, and (*b*) a comparison between data previously reported and the current report to show data concerning changes in leases between inventory reports.

B. SPECIFIC INSTRUCTIONS

1. Summary identification

Check the applicable block in the upper right hand corner of the form to indicate if the summary is for real property located (*a*) in the United States, or (*b*) outside the United States. Complete the fiscal year dates of the report.

2. Agency and bureau identification

Holding agency.—Enter in this block the name of the holding agency, that is, the controlling department, commission, administration, or authority. For example, Department of Commerce, Atomic Energy Commission, Veterans' Administration, or Tennessee Valley Authority.

Bureau or other major organization.—Enter in this block the name of the bureau, or comparable major organizational unit, within the holding agency. For example, National Bureau of Standards (Commerce), Bureau of Land Management (Interior), etc.

3. Summary data

Column (c) current GSA Forms 1166A.—This column will contain a summarization and consolidation of statistics included in the Annual Reports of Real Property Leased to United States Government, GSA Forms No. 1166A, submitted for the current inventory. Data for each line of this column will be entered as described below.

Line 1. Enter the number of GSA Forms No. 1166A submitted in the current report.

Line 2. Enter the total number of leases in effect on the reporting date, by adding the entries in block 19 of all GSA Forms 1166A submitted.

Line 3. Enter the total acreage leased by the bureau, or comparable major organizational unit, by adding the totals of blocks 12 and 13 of all GSA Forms 1166A submitted.

Line 4. Enter the total number of building locations leased by the reporting organization by adding the entries in block 15 on all GSA Forms 1166A submitted.

Line 5. Enter the total square feet of floor area leased by adding the totals of block 16 of all GSA Forms No. 1166A submitted.

Line 6. Enter on this line the total annual rental reported for leased real property by adding the entries in block 24 of all GSA Forms 1166A submitted.

Column (d) prior GSA Forms 1166A.—This column will not be completed for the first year an agency submits its report. Data for completion of this column will be obtained from column (c) of GSA Form 1209A submitted for the previous year's inventory report.

Column (e) difference.—On each line enter the result of column (c) minus column (d). Enter negative quantities in parentheses, thus, "(2)." Column (e) will not be completed for the initial report submitted by an agency.

4. Signature and date

Prepared by.—Type in the name and title of the official responsible for the preparation of the report.

Signature.—The official designated as responsible for the preparation of the report shall sign his name in this block.

Date.—Enter date on which the report was prepared.

5. Remarks

Any significant fiscal year activity should be explained or commented on in this block. When as a result of a new program, or termination of an old program, an agency's leasing activity changes, the cause thereof should be commented upon. Property management activities of a bureau or other major organization, which result in net economies to the Government should be noted. Program plans which will affect future leasing operations should also be noted. Any items which the bureau believes would interest the Congress, regulatory executive agencies, or the general public should be recorded in this block.

Realty Inventory of the Architect of the Capitol as of June 30, 1956

Current estimated evaluation of real property

1. Land	$82, 975, 500
2. Buildings and improvements	234, 090, 000
Total real property	[1] 317, 065, 500

[1] Present-day evaluation.

Included under this heading are the following properties: United States Capitol Building, Senate Office Building, Old and New House Office Buildings, and Grounds; site for an additional Senate Office Building; site for an additional House Office Building and appurtenant facilities for the House of Representatives; Legislative Garage; Laboratory used as field office; Capitol Power Plant; Main and Annex Library of Congress Buildings and Grounds; United States Botanic Garden and nursery; United States Supreme Court Building and Grounds; and United States Court of Claims Building.

REPORT OF FEDERAL REAL PROPERTY

United States Capitol Buildings and Grounds

Properties under legislative branch of the Government occupied by the Congress.

Land:

Acquired by purchase.
Acquired: 1791 to 1956.
Area: 154 acres.
(Includes site acquired in 1949 for additional office building for U. S. Senate and in 1956 for additional office building and appurtenant facilities for U. S. House of Representatives.)

Buildings:

United States Capitol, Senate Office Building, Old and New House Office Buildings, Legislative Garage, and Laboratory used as field office.
Constructed: 1793 to 1933.
Floor area: 2,735,000 square feet.

1. Occupancy and use of these buildings and grounds controlled by the Congress.
2. Assignment and reassignment of space in Capitol under Speaker of House of Representatives and Senate Committee on Rules and Administration; in Senate Office Building under Senate Committee on Rules and Administration; in Old and New House Office Buildings under House Office Building Commission; in Legislative Garage under Vice President and Speaker of the House.
3. Architect of the Capitol has the physical care of these properties.

85132—56——10

Capitol Powerplant

Property under the legislative branch of the Government. Supplies heat and air-conditioning refrigeration for the Capitol, Senate and House Office Buildings; heat for the Library of Congress Buildings, United States Botanic Garden, United States Supreme Court Building, Legislative Garage, Government Printing Office, Washington City Post Office, and Folger Shakespeare Library.

Land:

Acquired by transfer.
Acquired: 1904.
Area: 6 acres.
Transferred without cost by act of Congress.

Buildings:

Main powerplant building: 244 by 117 feet, with maximum height of 85 feet.
Annex powerplant building: 90 by 50 feet, 2 stories high.
Refrigeration plant building: 123 by 80 feet, height approximately 38 feet.
Walk-through tunnels, containing steam and chilled water distribution lines.
Constructed: 1904 to 1954.

1. Architect of the Capitol has the physical care and operation of plant.
2. Plant under control of the House Office Building Commission.

Library of Congress Buildings

Properties under legislative branch of the Government occupied by the Library of Congress.

Land:

Acquired by purchase.
Acquired: 1886 to 1932.
Area: 15 acres.

Buildings:

Main and Annex Buildings, Library of Congress.
Constructed: 1889 to 1938.
Floor area: 1,600,000 square feet.

1. Occupancy and use of buildings and grounds controlled by the Congress.
2. Architect of the Capitol has structural and mechanical care of these properties.
3. All other care, including assignment and reassignment of space, under the Librarian of Congress.

United States Botanic Garden

Properties under legislative branch of the Government occupied by the United States Botanic Garden, including Poplar Point Nursery.

Land:

Acquired by purchase, transfer, and public domain.
Acquired: 1851 to 1946.
Area: 33 acres.

Buildings:
Conservatories, greenhouses, office, storage and potting sheds.
Constructed: 1873 to 1933.
Floor area: 89,000 square feet.

1. Architect of the Capitol serves as Acting Director of United States Botanic Garden.
2. Botanic Garden under control of Joint Committee on the Library.

United States Supreme Court Building

Property under the Chief Justice of the United States occupied by the United States Supreme Court and the Administrative Office of the United States Courts.

Land:
Acquired by purchase.
Acquired: 1929–1930.
Area: 8 acres.
Building:
United States Supreme Count Building.
Constructed: 1931–35.
Floor Area: 392,737 square feet.

1. Occupancy and use of building and grounds controlled by the Congress.
2. Architect of the Capitol has structural and mechanical care of building.
3. All other care under marshal of the Court, except assignment and reassignment of space which is under the Court.

United States Court of Claims Buildings

Property occupied by and under the control of the United States Court of Claims.

Land:
Acquired by purchase.
Acquired: 1901–02.
Area: one-half acre.
Buildings:
United States Court of Claims Buildings.
Acquired in 1902.
Floor area: 37,000 square feet.

1. Occupancy and use of building and grounds controlled by the Congress.
2. Architect of the Capitol has structural and mechanical care of the buildings.
3. All other care, including assignment and reassignment of space, under the Court.

PART VI

INVESTMENTS IN RELATED AREAS (REALTY) OF THE EXECUTIVE AGENCIES, OFFICES AND ESTABLISHMENTS OF THE UNITED STATES GOVERNMENT, EXCLUDING THE DEPARTMENT OF DEFENSE, COVERING INVESTMENTS NOT INCLUDED IN OVERALL REPORT, AS OF JUNE 30, 1956

Related Realty Inventory of the Executive Agencies, Offices and Establishments of the United States Government, Excluding the Department of Defense, Covering Investments in (Related) Areas Not Included in Overall Report, as of June 30, 1956

Summary:	
Construction in progress	$939, 744, 000
Leasehold improvements	79, 149, 000
Real-estate collateral acquired	143, 681, 000
Total	1, 162, 574, 000

Related real property of selected agencies other than Department of Defense as of June 30, 1956

NOTE.—All assets herein reported are shown in gross amounts with no deductions for allowances for depreciation. Only wholly Government owned corporations and wholly owned assets are included. Assets held under trust arrangements and interagency assets are excluded. This table does not include figures for construction in progress which the Department of Defense is not prepared, at this time, to report on a firm basis for the 3 Departments of the Air Force, Army, and Navy. It is anticipated that such data will be available for the committee's next report.

DEPARTMENT OF AGRICULTURE

AGRICULTURAL RESEARCH SERVICE
FOREST SERVICE
SOIL CONSERVATION SERVICE

DEPARTMENT OF AGRICULTURE,
Washington D. C., December 3 1956.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations
United States House of Representatives Washington, D. C.

DEAR MR. DAWSON: Reference is made to your letter of April 11, 1956, requesting estimates of the value of public domain realty administered by this Department.

In accordance with your letter and subsequent discussions with members of the committee staff, we have prepared estimates for public domain lands administered by the Forest Service, including lands which have national-forest status and Bankhead Jones title III lands reserved from the public domain, and public domain lands administered by the Agriculture Research Service and the Soil Conservation Service. These estimates are shown in the accompanying table.

We wish to emphasize that these estimates are necessarily approximations. A detailed valuation of assets owned by the United States would be a major task. Because of rapidly changing values, estimates of this kind cannot be precise and are soon out of date. It is also especially difficult to make estimates for holdings such as the national forests which because of their extent and use cannot be compared directly with private holdings. As agreed upon with members of your staff, we have attempted to estimate the commercial values of public domain lands and timber for private ownership, based upon a concept of current "fair market value" and assuming the marketability of all lands. No allowances have been made for public values for such highly important but nonmonetary uses as water production. It should be recognized, however, that over all such public values far exceed commercial or market values of public resources.

To the extent possible we have used records of sale prices for comparable tracts of private land, but for most areas it has been necessary to rely on judgment estimates of the average current value of commercial forest land and timber, grazing land, recreation areas and other broad classes of land. Because of the tentative nature of these estimates, figures are shown only by regions, as agreed upon with members of your staff.

The estimates included herewith do not include the values of buildings, structures, and other facilities, which have been reported separately to the General Services Administration. The value of such improvements is reflected in the value of land and timber and hence should not be added to the realty values in the accompanying tabulation. The values of mineral resources subject to disposal under the

mining or mineral leasing laws are being reported to the Committee by the Department of the Interior.

We wish to call to your attention that the estimates of national forest value transmitted with this letter are substantially greater than the figures for national forest properties which we have certified to the Secretary of Commerce for use in the apportionment of forest highway funds by States. These new estimates were made on a regional basis and were not broken down by States because of lack of basic information and heavy costs of obtaining accurate appraisals on a State basis. Also, the values for acquired lands, which are located mainly in the Eastern States, are not included in the present report. Thus the new appraisal is not adequate for purposes of forest highway fund apportionment at this time. However, we are working with the Department of Commerce to develop a solution for the problem of forest highway fund apportionment.

Sincerely yours,

RALPH S. ROBERTS,
Administrative Assistant Secretary.

Acreage and estimated market value public domain realty, 1956, U. S. Department of Agriculture [1]

Region [2]	Area	Value [3]
	Acres	*Millions of dollars*
Pacific coast	43,548,761.0	5,212
Northern Rocky Mountain	45,323,480.2	[4] 639
Southern Rocky Mountain and Plains	48,115,943.0	501
North Central	1,391,608.0	16
South	1,233,407.0	98
Alaska and Puerto Rico	20,740,606.9	77
Total	160,353,806.1	6,543

[1] Includes national forests, Bankhead Jones title III lands, and research and demonstration areas.

[2] Pacific coast: California, Oregon, Washington. Northern Rocky Mountain: Idaho, Montana, Wyoming. Southern Rocky Mountain and plains: Nevada, Utah, Colorado, Arizona, New Mexico, North Dakota, South Dakota, Nebraska, Oklahoma. North Central: Minnesota, Wisconsin, Michigan, Missouri, Illinois. South: Arkansas, Louisiana, Mississippi, Alabama, Florida.

[3] Preliminary estimates of "fair market value" of land and timber for private ownership, assuming the marketability of all lands. Public and nonmonetary values not included. Acquired lands which are of relatively large importance in the East, also not included.

[4] Does not include value of certain areas of public domain lands in Wyoming in Eden Valley irrigation project administered under law as acquired land.

Department of Commerce

Coast and Geodetic Survey

Tucson Magnetic Observatory

1. Location of property: Route 2, Box 682, Tucson, Pima County, Ariz.

2. Description: The observatory is on desert land 10 miles from Tucson.

3. Usage: The installation is used as a magnetic observatory.

4 and 5. Buildings and facilities and their value:

BUILDINGS [1]

Type	Number	Floor space	Value
		Square feet	
Office	1	1,200	$9,000
Houses	2	2,766	15,000
Storage	3	778	2,000
Observatories	8	2,190	18,000
Total	14	6,934	44,000

[1] All buildings are permanent.

FACILITIES [2]

Type	Value
Fencing, 4,400 feet	$1,000
Gasoline storage tank, 280 gallons	500
Well, 200 feet with electric motor and 5,000-gallon storage tank	3,500
Electrical distribution system	1,000
Sewage system	1,000
Total	7,000
Total value of buildings and facilities	51,000

[2] All facilities are permanent.

6. Acreage: 173 acres.

7. Value of acreage: $1,730.

Sitka Magnetic Observatory

1. Location of property: Sitka, Baranoff Island, Alaska.
2. Description: The observatory is on wooded land on the northern outskirts of Sitka, Alaska.
3. Usage: The installation is used as a magnetic observatory.
4 and 5. Buildings and facilities and their value:

BUILDINGS[1]

Type	Number	Floor space	Value
		Square feet	
Houses[2]	2	4,551	$26,000
Storage	1	323	1,000
Service	1	252	1,000
Observatories	3	2,167	23,000
Total	7	7,293	51,000

[1] All buildings are permanent.
[2] In one residence, 475 sq. ft. are used as an office, 187 sq. ft. as dark room, and 532 sq. ft. for storage.

FACILITIES[3]

Type	Value
Electrical distribution system	$1,000
Roads and bridges	1,000
Sewage system	1,000
Water system	1,000
Total	4,000
Total value of buildings and facilities	55,000

[3] All facilities are permanent.

6. Acreage: 18.74 acres.
7. Value of acreage: $2,000.

[1] Less than $500.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington D. C., November 29, 1956.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House Office Building, Washington D. C.

MY DEAR MR. DAWSON: Reference is made to your letter of April 5, 1956, and to subsequent correspondence concerning the evaluation of public domain lands under the jurisdiction of the Department of the Interior as of June 30, 1956. This matter was also the subject of conferences between the staffs of the House Committee on Government Operations and the Department.

As requested by the committee, an estimated current market value has been placed on all public domain lands administered by this Department. The establishment of a "real estate value" based on the "current fair market value" concept of public domain lands, which, for the most part, cannot be sold and for which basic data are generally lacking, has posed practical difficulties. Nor do the estimates give weight to the unique scenic and recreational features of the national parks and monuments since, pursuant to the committee's instructions, the values assigned are based on "real estate" rather than on "recreational or other value." Therefore, the estimates are, at best, a rough approximation of actual values, subject to serious limitations on their usefulness.

The acreages used in this evaluation report were, of necessity, preliminary figures for June 30, 1956, and may vary somewhat from the final adjusted acreage figures as submitted to the General Services Administration for inclusion in the Inventory Report on Federal Real Property in the United States as of June 30, 1956.

As requested, we are also reporting the value of improvements on the public domain lands. These values have also been reported to the General Services Administration in connection with the annual Inventory Report on Federal Real Property as of June 30, 1956.

After consultation with the committee staff and with other public domain administering agencies, this Department agreed to undertake the evaluation of mineral resources on all the public domain lands. The estimates submitted are the present value to the Federal Treasury of its anticipated income from leasing and fees from the mineral resources of the public domain, not the gross value of all minerals present or inferred. Caution is particularly necessary in using the estimates for the Outer Continental Shelf, or the total estimate which includes the OCS estimate, since the Outer Continental Shelf production is as yet quite small, litigation is in process which could redefine the inner limits of Federal lands, and technological developments difficult to evaluate, will determine the outer limits. It is recommended that the foregoing limitations on the mineral evaluation data

as well as the footnotes to the tabulation appear with any publication of the data.

Enclosed are the following:

(1) Tabulation by States showing the Estimated Market Value of Public Domain Lands Administered by the United States Department of the Interior as of June 30, 1956, including average value per acre and value of improvements.

(2) Procedures for Evaluating Public Domain Under the Jurisdiction of the Department of the Interior.

(3) A tabulation showing the Mineral Resource Value of the Public Domain by States.

(4) Procedure for evaluating public domain minerals pursuant to the request of the House Committee on Government Operations.

Sincerely yours,

FELIX E. WORMSER,
Acting Secretary of the Interior.

Estimated market value of public domain lands administered by the U. S. Department of the Interior as of June 30, 1956

Total, United States and Alaska	[2] 518,829,700	2,670,771,592	5.34	[3] 874,908,848

[1] Includes all Alaska Railroad buildings, structures, and facilities, some of which may be on nonpublic domain.

[2] Preliminary acreage figure for June 30, 1956, which may vary somewhat from final adjusted figure as reported to General Services Administration.

[3] Also reported to General Services Administration in connection with the annual Inventory Report on Federal Real Property as of June 30, 1956.

PROCEDURES FOR EVALUATING PUBLIC DOMAIN UNDER THE JURISDICTION OF THE DEPARTMENT OF THE INTERIOR

1. Each bureau will report the value of the acreage of public domain, and lands transferred from the public domain, under its jurisdiction based on the acreage reported in the inventory report on Federal real property in the United States as of June 30, 1955, as revised to make the figures current as of June 30, 1956.

2. Only public domain or lands transferred from the public domain, on which cost figures have not previously been reported, will be included in the evaluation report. Specifically excluded are Indian trust lands. However, public domain, reserved and unreserved, in the Territories and island possessions, should be evaluated.

3. The reported values will be the current estimated market value as of June 30, 1956, including, but not reported separately, surface resources and those "improvements," the cost of which has not previously been reported under buildings, other structures, and facilities. ("Improvements," as noted in this part, means range, soil and moisture, or similar type projects.) The value of buildings, other structures, and facilities which is to be included in the annual inventory report for fiscal year ending June 30, 1956, to the General Services Administration, shall also be included in this report.

4. Evaluation procedure will follow standard appraisal methods using both the market data (comparable sales) and capitalization of returns approaches to the fullest extent practicable. However, it is not contemplated that the setting of values will entail the systematic collection of additional value data at the field level.

5. Each bureau will report its public domain acreage and estimates of value by States.

6. While the inventory report classifies lands into a number of categories, including parks and historic sites, the committee has indicated a desire for an actual real estate value rather than a "recreational or other" value. It will therefore be appropriate to consider the public domain lands in terms of their predominant characteristics such as range, forest, woodland, agricultural, etc., without regard to their administrative status.

7. Procedural suggestions: Range lands represent the largest single category of public domain. Values may be estimated by the use of market data or by the capitalization of fees or rentals or both. Where carrying capacity is known the land values may be ascertained by capitalization of the grazing fees appropriate for the particular land. However, range lands may be classified in more general terms and estimated values arrived at by use of available market data. Use of both approaches, when feasible, provides a check on the final value estimate.

Forest and woodlands are also subject to two valuation procedures: estimating the volume of merchantable timber and determining its market value or capitalizing the current annual value of timber or other forest products sold from the land.

8. Mineral values will be determined separately from land values and need not be considered by the land administering agencies.

9. Each bureau should coordinate its evaluation processes with other bureaus and agencies engaged in placing a value on similar lands.

Mineral resource [1] value of the public domain [2]

State	Value [3]	Remarks
Alabama	$200,000	Coal; oil and gas.
Arkansas	400,000	Oil and gas.
Arizona	2,200,000	Do.
California	232,000,000	Oil and gas; sodium; potash; coal.
Colorado	207,000,000	Oil and gas; coal; sodium.
Florida	20,000	Oil and gas.
Idaho	13,000,000	Phosphate; oil and gas; coal.
Kansas	2,500,000	Oil and gas.
Louisiana	5,300,000	Do.
Michigan	100,000	Do.
Mississippi	100,000	Do.
Montana	60,000,000	Oil and gas; phosphate; coal.
Nebraska	300,000	Oil and gas.
Nevada	29,000,000	Do.
New Mexico	289,000,000	Oil and gas; potash; coal, sodium.
North Dakota	6,000,000	Oil and gas; coal.
Oklahoma	11,000,000	Coal; oil and gas.
Oregon	3,300,000	Oil and gas; coal.
South Dakota	4,700,000	Do.
Utah	97,000,000	Oil and gas; coal; potash; phosphate.
Washington	200,000	Oil and gas; coal.
Wyoming	534,000,000	Oil and gas; sodium; coal; phosphate.
Continental United States	1,497,320,000	
Alaska	41,000,000	Oil and gas [4]; coal.
Outer Continental Shelf	3,200,000,000	Oil and gas; sulfur.
Total United States	4,738,320,000	

[1] For the present purpose of establishing a "real estate" value of the public domain, mineral resource values are the capitalized value of income accruing to the Federal Treasury. This income is almost entirely derived from minerals subject to mineral leasing acts. Only negligible income to the Federal Treasury, from filing and patenting fees, is derived from minerals subject to location under the mining laws because they pass from Federal ownership upon discovery and location; before discovery they have only speculative assignable value best reflected in the surface values. Building stone, sand and gravel, and similar materials subject to disposal under the minerals act are also reflected in surface values.

[2] Includes lands transferred from the public domain. Excludes all acquired lands.

[3] Predicated on present receipts from mineral leases, licenses, permits, and patent fees, taking into account probable future production and demand factors; capitalized as an annuity for 50 years at 4 percent compound interest and discounted to present value.

[4] Alaska oil and gas royalty estimates are capitalized as the present value, at 4 percent compound interest, of a 10-year annuity deferred 40 years.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C. August 10, 1956.

MEMORANDUM

Subject: Procedure for evaluating public domain minerals pursuant to the request of the House Committee on Government Operations.

A meeting was held on August 8 to discuss this subject. In attendance were—

D. Carl Abernethy, Geological Survey
Lewis E. Hoffman, Bureau of Land Management
Paul F. Yopes, Bureau of Mines
Donald D. Carruth, Administrative Assistant Secretary
John B. Bennett, Technical Review Staff
Samuel G. Lasky, Technical Review Staff
Robert K. Coote, Technical Review Staff

With respect to the evaluation of minerals the Department's letter of June 19, 1956, advised the committee as follows:

"The appraisal of mineral values has been discussed with Department of Agriculture representatives. It was agreed that, for all public domain lands, including those within national forests, the Department

of the Interior will be responsible, in collaboration with Agriculture, for evaluating and reporting on such minerals as are subject to disposal under the mining or mineral leasing laws.

"Because of the nature and complexity of the mineral evaluation problem, mineral values will be reported as a national total without further geographic breakdown. This will require collaboration of Interior with other agencies, such as the Department of Defense, to arrive at a generally uniform basis for reporting mineral resources values on all public domain lands including those which have been withdrawn for the use of those agencies."

In reply the committee said:

"It is noted that you expect to collaborate further with other Government departments and agencies concerning a uniform basis for reporting mineral resource values on all public domain lands. Rather than have *one national total* covering these values, the committee feels that for the sake of clarity and in keeping with the other various breakdowns which will be listed in the report, it would be advisable to have mineral resource values broken down to totals by States if at all possible. A breakdown such as this has been discussed with representatives of your Department."

Within this reference it was agreed that—

(1) The Geological Survey would be responsible for the evaluation of all public domain minerals with the assistance of the Bureau of Mines, the Bureau of Land Management, and the Technical Review Staff.

(2) Existing mineral values are to be reported for all public domain lands, or lands transferred from the public domain irrespective of their jurisdictional status, including the public domain lands in Alaska. This includes lands transferred from the public domain which are now in national parks, forests, military, and other reserves. The committee also requested the value of minerals on the Continental Shelf. Acquired lands are excluded from the appraisal.

(3) The acreages to be reported will be based on the acreage reported in the Inventory Report on Federal Real Property in the United States as of June 30, 1956.

(4) One total value figure will be reported for each State in which public domain mineral values exist.

(5) Valuation of minerals subject to mineral leasing acts such as coal, oil and gas, phosphate, potash, etc., will be predicated initially on past experience of gross revenues received, capitalized at the prevailing interest rate. Future production will be estimated from past experience projected on a curve taking into account probable demand factors. Evaluation of this estimated future production will reflect present worth discounted for the estimated time of recovery.

(6) The value of minerals subject to location under the mining laws will be included in the overall evaluation figures. The problem of evaluating such minerals differs from that of evaluating minerals subject to the mineral leasing acts, in two ways. First, whereas all future discoveries of minerals subject to the mineral leasing acts will be made on public lands, discoveries of minerals subject to location under the mining laws will be made in part

on lands already patented or held by mineral location, and in part on public lands. Second, minerals subject to location under the mining laws, upon discovery and location, pass from Federal ownership. Before discovery they have only speculative assignable value. Therefore, it may be considered generally that the value of undiscovered minerals which are subject to location under the mining laws and are now under the public domain will be reflected in the surface values assigned to the land. Despite these difficulties of appraisal, however, due consideration will be given to such minerals and evaluation placed on them where feasible.

(7) Minerals subject to disposal under the minerals act such as building stone, gravel and the like are to be reported by each agency as part of the land value and are not to be included in the mineral evaluation.

(8) At least a preliminary report on mineral values will be submitted to the Technical Review Staff by October 1.

R. K. Coote,
Staff Assistant, Technical Review Staff.

DEPARTMENT OF JUSTICE
BUREAU OF PRISONS

DEPARTMENT OF JUSTICE,
BUREAU OF PRISONS,
Washington, October 25, 1956.

Re Real Property Inventory,
Federal Prison Service.

WILLIAM A. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D. C.

MY DEAR MR. DAWSON: Evaluations have been made on the three parcels of public domain lands under the jurisdiction of the Bureau of Prisons, and included in our annual inventory as of June 30, 1956. The following information is submitted in accordance with your request of May 14, 1956.

United States Penitentiary, Alcatraz, Calif.

We were able to determine the land value at the time of transfer by the United States Army to the Bureau of Prisons, based on the county assessor's office records in 1934. An amount of $14,000 per acre, or $177,800 for 12.7 acres, has been included in our accounts. The original buildings on the island when acquired by the Army have not been evaluated, as they are considered useless. Adjustment was made, however, to include the $178,842 expended by the Army for buildings and $10,325 for roads and a fuel storage tank. These amounts were taken from Army records at the island. Subsequent Bureau of Prisons disbursements in the amount of $1,587,158 for buildings and $372,730 for other structures and facilities were already in our accounts.

Federal Reformatory, El Reno, Okla.

There was not available information as to the value of public domain land at this institution when acquired by the Bureau of Prisons in 1932. A temporary evaluation was included in our books at $107 per acre, or $107,000 for 1,000 acres. This amount was furnished on May 8, 1956, by the Department of Agriculture, and was based on the average value of Canadian County land as determined by the 1954 census. Adjustment will be made later to agree with the value of adjacent land which is owned by the Department of Agriculture. There were no buildings on the land when acquired. Subsequent funds disbursed by the Bureau of Prisons are $1,908,000 for buildings and $286,000 for other structures and facilities, which were already in our accounts.

United States Penitentiary, Leavenworth, Kans.

Accurate information was not available as to the value of the public domain lands at this institution when acquired. A current appraisal was made in June 1956 by impartial parties at our request. It was decided that $150 per acre was a fair value, compared with adjacent

privately owned land, or $190,000 for the 1,265 acres. No buildings were on this land when acquired. Subsequent improvements by the Bureau of Prisons were not included entirely in our accounts, since this institution was built prior to our present accounting system. An estimate was made, based on early records at the institution, and adjustment made in our books. A total of $3,827,000 for buildings and $445,000 for other structures and facilities is included in our accounts as the funds disbursed by the Federal Prison System since acquisition.

The above values for only the public domain lands ($177,800; $107,000; $190,000: total $474,800) were not included in the General Services Administration report. We trust this information will assist your committee in your project. We shall be glad to furnish additional data upon request.

Sincerely yours,

JAMES V. BENNETT, *Director.*

Bureau of Prisons—Public domain properties

Location	Acreage	Value of acreage	Value of buildings and facilities	Total
United States Penitentiary, Alcatraz, Calif	12.7	$177,800	$2,149,055	$2,326,855
Federal Reformatory, El Reno, Okla	1,000	107,000	2,194,000	2,301,000
United States Penitentiary, Leavenworth, Kans	1,265	190,000	4,272,000	4,462,000
Total	2,277.7	474,800	8,615,055	9,089,855

Post Office Department

Post Office Department,
Bureau of Facilities,
Division of Real Estate,
Washington, D. C., July 25, 1956.

Hon. William L. Dawson,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D. C.

Dear Mr. Chairman: Referring to your letter of June 22, 1956, and earlier correspondence, I am pleased to submit the following information relative to public domain properties in Alaska, under the control of the Post Office Department as of June 30, 1956:

Location	Number of acres	Description	Value		
			Land	Building	Total
Anchorage	2.0	Land and building	$435,677	$2,375,000	$2,810,677
Ketchikan	1.7	do	189,875	1,206,000	1,395,875
Sitka	.7	do	23,067	512,000	535,067
Wrangell	2.5	do	150,000	393,000	543,000
Total	6.9		798,619	4,486,000	5,284,619

If any additional information is desired, I shall be very pleased to cooperate.

Cordially yours,

Rollin D. Barnard,
Deputy Assistant Postmaster General
(For the Assistant Postmaster General).

Treasury Department

UNITED STATES COAST GUARD

Total			3,594.5	1,636,710	40,138,650

ATOMIC ENERGY COMMISSION

UNITED STATES ATOMIC ENERGY COMMISSION

Washington, D. C.

Subject: Present value of public domain land used by AEC and the present value of AEC improvements on such land.

Reference: Letter to the Chairman, AEC, from chairman, House of Representatives Committee on Government Operations dated May 14, 1956, relating to the above subject.

Attached is a tabulation, by States, showing: (1) the area, the value as of June 30, 1956, and usage of the public domain land controlled by the AEC in connection with its operations, (2) the number, classification and the value as of June 30, 1956, of the AEC buildings on such land and, (3) the value as of June 30, 1956, of other structures and facilities constructed on such land by the AEC. The statistical tabulation has been prepared on the basis of information furnished by operations offices using public domain land in accordance with the following instructions:

1. *Public domain.*—For the purpose of the report the term public domain was defined as that land within the continental United States and Alaska, title to which was acquired by the United States of America by treaty, conquest, or cession from the original 13 colonies and such title is still vested in the United States.

2. *Present value of public domain land.*—That such value should be for the surface land only inasmuch as it was understood that the subsurface or mineral value would be fixed by geological survey on a State by State basis. It is understood that the method for fixing the subsurface value had the approval of the House Committee on Government Operations. Operations offices were advised further that it was not desired that a formal appraisal be made of such land, but the value should be developed on the basis of what similar lands were selling for as determined by available information or informal inquiry of those who might possess such knowledge.

3. *Present value of buildings.*—That such value could be estimated with sufficient accuracy by taking the total net book cost as of June 30, 1956, for each classification of buildings reported and applying the ratio of Engineering News Record for June 1956 (building or construction) for the applicable geographical area divded by the corresponding Engineering News Record index applicable at the time of construction. The value of other structures and facilities were to be determined by the same method. In general, this is a cost of reproduction which takes into account depreciation.

General.—When buildings and other structures and facilities were located on public domain land and nonpublic domain land, effort has been made to prorate that portion on the public domain land. The value for buildings excludes the cost of equipment which is not capitalized as a part of the cost of the buildings.

California

Public domain land

Usage	County	Acreage	Value
Testing weapons	Imperial	28,790	$376,344
Subtotal		28,790	376,344

Buildings

Usage	Number	Gross floor area	Present value
Office	1	286	$9,485
Research facilities	29	41,600	987,494

FEDERAL REAL AND PERSONAL PROPERTY INVENTORY REPORT (CIVILIAN AND MILITARY) OF THE UNITED STATES GOVERNMENT, COVERING ITS PROPERTIES LOCATED IN CONTINENTAL UNITED STATES, IN THE TERRITORIES, AND OVERSEAS, AS OF JUNE 30, 1957

Part I

INTRODUCTION

This Federal Property Inventory Report is the third inventory report issued by the Committee on Government Operations of the House of Representatives. The committee's first report, as of June 30, 1955 (12th Intermediate Report, Rept. No. 1930, 84th Cong., 2d sess.), was issued on March 21, 1956, and its second report, Supplementary Real and Personal Property Inventory Report (Civilian and Military) of the United States Government Located in the Continental United States, in the Territories and Overseas, as of June 30, 1956, was issued in December of last year.

In continuing and pursuing its objectives of presenting a broadened and improved up-to-date inventory of real and personal assets of the United States Government, the committee has prepared this Federal Property Inventory Report listing inventories as of June 30, 1957. These inventories are located in the United States, its Territories and at overseas bases and installations.

One needs only to compare these inventory reports to realize that much progress has been made in the improved accounting and record-keeping of the gigantic amounts of real and personal property owned by the Federal Government. Up-to-date accounting systems have greatly assisted the Government departments and agencies in their endeavor to bring inventories under accounting control. An awareness of this progress, which is being constantly observed, has been stimulated within the departments and agencies due to the interest in and the scrutiny of these inventories by Members of Congress, and particularly the membership of this committee.

Again this year, additional refinements are reflected within this Federal Property Inventory Report. Concentrated efforts continue, and will continue, by the committee staff assigned to this project, in working with Government department and agency representatives, to improve and broaden the scope of the Federal Property Inventory Report. It is the desire of the committee eventually to present an inventory report which will furnish the members of the House Committee on Government Operations, the Congress, and the public a complete and comprehensive listing of Federal personalty at acquisition cost and all Federal realty at acquisition cost as well as estimated present-day evaluations. This objective was partially realized last year in that our report listed public domain and Capitol Hill realty at estimated present-day evaluations. Again, in this report, these

properties are listed at those values. Progress is continuing, we feel, in the right direction of fulfilling the eventual objective of the committee.

FEDERAL PERSONALTY

Federal personalty figures in this report have been furnished the committee by the Department of the Treasury for all Government departments and agencies with the exception of the Department of Defense. The Department of Defense reports direct to the committee all its inventories, real and personal, for the three military departments and the Corps of Engineers, civil functions.

Federal personalty (exclusive of cash and related cash items) is reported herein at acquisition cost. This manner of reporting the value of personalty assets has been discussed with representatives of the General Accounting Office and the Treasury Department. It is the consensus that this approach represents a realistic method of evaluating personalty items, especially in light of replacement costs and in considering amounts received for such items when they are declared surplus and offered for sale. In recording values of items such as paintings, portraits, statues, numerous publications and volumes of books where records are unavilable or the acquisition cost is unknown, an estimated or known value has been used. It should be borne in mind that the acquisition costs recorded for some buildings and facilities is representative of present-day evaluation. This is true when considering the value of buildings and facilities which have been constructed recently.

Last year's report indicated that personalty inventory figures were increased as a result of refinements brought about by improved accounting procedures employed within the Government and as a result of some Department of Defense inventories being brought under accounting control. Also, the Department of the Treasury was instrumental in furnishing the committee with data which reflected refinements in many areas of accounting. Further refinements are noticeable in this current Federal Property Inventory Report. This is particularly noticeable in the inventories of the Department of Defense where much effort and time have been spent in reporting areas of personalty and realty this year which have not been reported previously.

FEDERAL REALTY, EXCLUDING PUBLIC DOMAIN

Federal realty is again listed, for the most part, in this report at acquisition cost with usage categories and number of acres noted. In many cases where realty has been donated or obtained by the Government at no cost, the land is listed at "no value"—the same as it is recorded on the books of the Federal Government.

In keeping with the desires of the committee, the Architect of the Capitol has furnished realty figures for inclusion in this Federal Property Inventory Report which reflect estimated present-day evaluations on properties under his control.

Construction work in progress figures of the Department of Defense were omitted from the realty portion of the Supplementary Federal Property Inventory Report last year. At that time figures had been compiled in this area by the Department of the Air Force and the Corps of Engineers, Civil Functions, but were not available from the

other military departments. Construction work in progress figures for all Government departments and agencies, with the exception of the Department of Defense, were included in last year's report. This year, for the first time, this report carries an accounting of these assets for the entire Federal Government in the realty portion of the report. This is a big step forward in accounting for billions of dollars' worth of Federal assets not heretofore wholly recorded in our accounting of assets of the Government and in realizing the ultimate objective of a comprehensive and complete listing of all Federal assets in all areas rather than limited reporting in selected areas.

The Department of Defense representatives have been most cooperative and helpful to the committee in its endeavor to compile a complete and comprehensive Federal Property Inventory Report. This has been largely due to the Department's constant endeavor to bring its inventories under accounting control.

Federal realty is of great concern to the Committee on Government Operations. There is, at the present time, much acreage listed on the books of the Federal Government at "no value" simply because it was received by the Government at no output of moneys. These properties are valuable and are definitely an asset of the Federal Government and should be listed at some realistic value rather than continuing to be listed on the balance sheets of our Nation's Government at no appraised value. Good bookkeeping practices demand that this situation be corrected.

FEDERAL REAL ESTATE—FUTURE PRESENT-DAY ESTIMATED EVALUATION

The committee had expected that by the time this report was ready for publication at least a part of the Federal realty, with the exception of public domain and Capitol Hill properties, would be reported at estimated present-day evaluations. It is true that buildings, structures, and facilities that have been built on Federal realty (or property which has been purchased recently) are reflected on the books of the Federal Government, and in this report, at acquisition cost which, in most cases, will represent a present-day evaluation. However, some other properties are, and have been recorded for years on the books of the Federal Government at acquisition cost. In most instances these figures in no way represent present-day value. In many instances values have increased tremendously; and in others the property has decreased in value.

Assistance has been pledged by the American Institute of Real Estate Appraisers to assist the Committee on Government Operations and the Government departments and agencies on a pro bono publico basis in this undertaking. An advisory committee was appointed in 1956 and members of this advisory group have made two trips to Washington to meet with Chairman Dawson, committee staff members, and representatives of Government departments and agencies, including the Administrator of the General Services Administration and the Assistant Director of the Bureau of the Budget. As a result of the first meeting, the Administrator of General Services agreed to set up a governmental interagency committee which would endeavor to work out evaluation formulas which could be applied to all Government real property. After the establishment of these formulas which would be acceptable to the departments and agencies, and to the

General Services Administration, they would be presented to the advisory committee of the American Institute of Real Estate Appraisers for expert review. To date the governmental interagency committee has not prescribed such formulas.

Just prior to the second meeting of the advisory committee with representatives of the House Committee on Government Operations and Government department representatives, referred to above, which took place in Washington at the General Services Administration headquarters, Administrator Floete and Mr. Herbert Rappaport, Assistant Director of the Bureau of the Budget, met with Chairman Dawson. They suggested to the chairman that rather than have formulas established for all Government agencies and departments at one time, it might be preferable to use the approach of naming a "pilot agency" initially. After the named department or agency had completed the task of evaluating its realty holdings—in accordance with methods and formulas suggested by the advisory committee of the American Institute of Real Estate Appraisers, the House Committee on Government Operations, the General Services Administration, the advisory committee, and the pilot agency itself could evaluate the time element, value of the data, and cost element thereof involved against the finished product to determine whether or not the employed methods should be applied to other Government departments and agencies. This suggestion was approved by Chairman Dawson.

A questionnaire was sent to the departments and agencies by the General Services Administration in an attempt to determine which department or agency could most advantageously serve as a "pilot agency." Considerable time was spent in this endeavor without an agency being named. On April 5, 1957, the Administrator of General Services wrote Chairman Dawson suggesting that the General Services Administration could serve as a "pilot agency" in this instance but he stated that because of the limited amounts, types, and categories of Federal realty held by the GSA it was doubtful that it would meet the needs or desires of the committee. To date the selection of a suitable "pilot agency" and the establishment of evaluation criteria still has to be accomplished.

It is the intent of the committee that during the next few months renewed efforts will be made in this direction and that very soon the Federal Property Inventory Report will reflect realistic figures on Federal real estate—based on approved evaluation procedures and practices—rather than including figures which, in many instances, are antiquated and present a misleading picture of the Government's investment. It has been established that the most realistic and honest approach to the evaluation of Federal realty is to use the formula of "estimated replacement cost less depreciation." From this formula, it is expected that reevaluation criteria will be developed and put into practice. The committee feels that a continuation of the present practice of evaluation by governmental authorities who are aware that such present practices result in misleading and antiquated evaluations demands a more convincing defense than has been made of them.

The committee is aware that the evaluation process will require both time and money, but only after one Government department or agency has assumed the role of a "pilot agency"—one having a multi-

tude of various types of property, and goes forward with the undertaking—only then will the committee have an idea of the time element and cost factors involved. Chairman Dawson has stressed time and time again that the Committee on Government Operations stands ready to assist the General Services Administration and the Government departments and agencies in every way possible to accomplish the desires of the committee in obtaining an up-to-date Federal Property Inventory Report at the earliest possible date. He is giving the matter of the selection of a suitable "pilot agency" and the formulation of evaluation formulas his personal attention.

PUBLIC DOMAIN PROPERTIES

Public domain acreage is listed again in this report at estimated present-day evaluations. In some instances, Federal departments and agencies have been able to place an estimated present-day evaluation on buildings, structures, and facilities located on public domain lands. Where these evaluation figures are available, they are listed in the report in the public domain table. These figures, however, are not included in the overall summary realty totals. To avoid duplication and for the sake of clarity, all buildings, structures, and facilities are shown at acquisition cost evaluations. As and when "yardstick" evaluation criteria have been established and it is possible to list all improvements on Federal real estate at an estimated present-day evaluation, it will then be possible to have all realty tables on current up-to-date basis. The method used in this report has been utilized so as not to confuse the reader of the report and not to have an overlapping of figures and properties. In many cases, because of the nature of the property and the installation itself, it is not possible to determine, because of intermingling, whether some structures are on public domain property or regular Federal property.

Estimated present-day evaluations have been determined by qualified field representatives presently employed in the real property field offices of the departments. As a result of this skill and assistance, evaluations have been determined without having to engage the services of private professional appraisers. The Department of the Interior is responsible for determining overall values of mineral, oil, and ore deposits for all Government departments and agencies and the Department of Agriculture is responsible for furnishing the committee with estimated overall values of timberlands, grazing lands, grazing rights, etc. All public domain data are furnished the committee direct and are not furnished through the General Services Administration.

In pursuing its objectives of broadening and improving an up-to-date inventory of real and personal assets of the Federal Government, the committee presented in its Federal Property Inventory Report last year (as of June 30, 1956) a realistic estimated present-day evaluation of public domain lands. These lands have heretofore been listed on the books of the Government at "no value."

An attempt was made in 1937 to evaluate public domain acreage. After considerable time, effort, and funds had been expended, the resultant declared value of these lands was placed at $1.25 per acre. That figure certainly in no way reflects the true value of these lands—either in 1937 or today. One of the objectives of this committee undertaking has been to face this situation realistically and to delve

into these property areas and encourage improved accounting of known Federal assets.

Public domain lands have been appraised by the individual departments and agencies and an estimated present-day value placed on them based on evaluation criteria employed in evaluating Federal or privately owned adjoining properties. In some instances, estimated present-day values were placed on buildings, structures, and facilities located on these lands. However, these values were not included in the overall totals used in the report. Rather, they were included merely for information purposes. It was not possible, because of the time element, for all departments and agencies to complete the job of evaluating buildings, structures, and facilities on these properties. It was possible, however, to complete the job of evaluating the acreage.

For the sake of clarity, acquisition cost figures have been used in this report covering Federal realty and the buildings, structures, and facilities located thereon. Also included in the realty portion of this report are figures covering areas of construction in progress, leasehold improvements, and real-estate collateral acquired.

ACKNOWLEDGMENTS

Acknowledgment is made to the Government department and agency representatives who have been of such great assistance to the committee in the preparation of this report. They have been particularly helpful to the committee in furnishing needed data either direct or on a representative-for-agency basis.

Without the able assistance of qualified and interested Government representatives, the compilation of accurate and comprehensive data in the realty and personalty fields, as represented in this report, would not have been possible.

CONCLUSION

The committee feels that each Federal property inventory report it releases is a step forward in realizing the objectives set forth in the original intent of House Resolution 26, introduced in the House of Representatives on January 5, 1955, by Congressman Martin Dies, which was referred to the House Committee on Government Operations. The initial report, as of June 30, 1955, was a starting point and represented efforts to record, in inventory form, assets of the Federal Government in one document. Up until the time our first report was prepared, there was no central place where one could find data covering all Federal real and personal assets which were located in continental United States, the Territories, and at overseas bases. The second report, as of June 30, 1956, represented considerable improvement in recording assets of the Federal Government with a focal point on listing properties in a realistic sense—estimated present-day evaluations. Public domain properties—never before accurately evaluated—were recorded not at $1.25 an acre (which was done in 1937), but at values representing their estimated present-day worth. Federal personalty was recorded at acquisition cost which is the manner the committee contemplates continuing to report it.

This, of course, is on the advice of the General Accounting Office representatives and other accounting specialists within the Government.

Federal real estate, excluding public domain properties, is again listed at known acquisition cost. This particular area of the Federal property inventory report concerns the chairman and members of the House Committee on Government Operations. It is expected that in the near future evaluation criteria will be formulated and put into practice which will enable the committee to compile an inventory report which will be far more realistic, honest, practical, and useful than one which reflects acquisition cost figures.

The scope of an inventory the size of those owned by the Federal Government is tremendous and complex. Improved bookkeeping methods and accounting controls which are being stressed constantly is proving to be an asset, both within civilian and military departments and agencies of the Government. Government property representatives assisting in this endeavor are deeply interested in improving records which represent the Government's investment in the real and personal property fields. It has been established that the need is great for an up-to-date Federal property inventory report such as the committee has undertaken. This project will continue to reflect various economic changes in values as well as improved inventory reporting practices. The results, represented in informative report form, will be of constant utility.

More and more requests are being received by the committee from private business concerns, associations, and organizations, as well as from Government sources, schools and universities for copies of our report.

In compiling data of a classified nature for inclusion in this report, the committee has kept in mind the importance and necessity of security regulations. Efforts have been made to record classified data in a manner so as to insure accuracy and at the same time remain informative. Breakdown figures have been used in each instance possible and only in restricted areas have lump-sum figures been recorded. Substantiating data covering classified areas are available within the departments for those qualified to see and study on a need-for-use basis.

This inventory report records, as of June 30, 1957, Federal real and personal assets as being $250 billion. It is interesting to observe, in this connection, that the size of the national public debt as of June 30, 1957, was reported to be over $270 billion, and as of October 25, 1957, it was reported as being over $274 billion. These are sizable figures—staggering to the average American citizen—especially when one starts thinking seriously about the actual size of a billion dollars. We hear the word "billion" used so frequently these days—it is interesting to attempt to realistically comprehend the actual size of a billion dollars.

The Washington Evening Star, on January 23, 1957, carried a most interesting and informative column entitled "Your Money's Worth—What Is $1 Billion?" authored by Sylvia Porter (Hall Syndicate, Inc.). The column outlines very realistically the actual size of a billion dollars. It is reprinted below:

Your Money's Worth

By Sylvia Porter

What Is $1 Billion?

How big is $1 billion? How big is the budget?

What's a billion? If a corporation had started in business with $1 billion in the year 1 A. D. and had managed so badly that it lost $1,000 a day, it still at this moment would have enough left of the original billion to continue operating and continue losing $1,000 a day for another 782 years:

Budget item: The President estimates that in the 12 months beginning next July spending on "major national security" will hit $43.3 billion—and a full $38 billion of this will go to the Defense Department's military functions alone. And all that this will provide in those 12 months, says Mr. Eisenhower, is a "wise and reasonable degree of protection for the Nation." It's "a simple matter of self-preservation."

What's a billion? If you had $1 billion in $10 bills and you decided to lay them end to end, your $10 bills would stretch along the main automobile route from New York to San Francisco more than 3 times.

Budget item: The new 1958 budget estimates that the Treasury will have to pay $7.4 billion during just 12 months for interest on the public debt. That's the money the Government will owe to individuals and institutions owning the various securities issued by the Treasury. It's an alltime record; it's the second biggest item in the budget; it's way up even though the debt is down because the Treasury has been squeezed by the tight money policy too and has been borrowing money at rising interest rates. And it's a total that can't be cut by Congress.

What's a billion? If you had $1 billion and you set out to count it at the rate of $100 per minute, 8 hours per day, 6 days per week, it would take you more than 66 years to finish the job.

Budget item: The new budget asks $5 billion for veterans' services and benefits. The total is up, says the President "largely because of the rising number of veterans and their survivors who receive non-service-connected pensions."

What's a billion? If Julius Caesar (44 B. C.) were still living and trying to spend $1 billion at the rate of $1,000 a day, he'd have to live to the year 2697 to get rid of the kitty himself.

Budget item: Various farm programs are to get another $5 billion and, although spending on price supports is expected to be below 1956, spending on other agricultural programs will more than offset the drop.

What's a billion? If you had $1 billion in $100 bills and you piled one on top of the other, you could make three stacks—each more than double the height of the Washington Monument.

Budget item: The President is asking $3.5 billion for "labor and welfare" in the 12 months beginning July. It's to be spent for promotion of education, public health, public assistance, etc.

What's a billion? If you had $1 billion in $1 bills and your decision was to line a street of Washington, D. C., with them, you could erect a wall of dollar bills almost 14 feet high along each side of Pennsylvania Avenue from the White House to the Capitol.

Budget item: The President wants $1.5 billion for "general government." The total is below this year's spending "because of a reallocation of costs."

What's a billion? If you had $1 billion, you could give each of 94,340,000 women a permanent wave at $10.60, or you could give each of 15,773,000 men a wool suit at $63.40 a suit, or you could give each of 227,791,000 children a pair of roller skates at $4.39 a pair.

Budget item: The 1958 budget projects spending at almost $72 billion and a tax take from us and receipts from customs of over $73 billion.

The squabble over slashing the spending is already on in full force—but the odds are the budget will get bigger before it gets smaller. So before the era of the trillions emerges, herewith is my contribution to your comprehension of the era of the billions."

(Copyright 1957. Hall Syndicate, Inc.)

Continued efforts will be made in the coming months to prepare a better Federal property inventory report as of June 30, 1958. As future reports are improved and refined, and when realty data are evaluated and recorded at estimated present-day evaluations, it is felt that the objectives of this project will have been realized. It is a known factor that this project is one of the most worthwhile and valuable projects undertaken by the Committee on Government Operations. We feel that we are headed in the right direction and with the assistance of the Federal departments and agencies, together with the advice and assistance which has been offered the committee and the Federal Government by the American Institute of Real Estate Appraisers, that our undertaking of recording, in annual report form, assets of the United States Government, located in continental United States, the Territories and at overseas bases, can and will be accomplished.

PART II

MASTER RECAPITULATION OF FEDERAL PERSONALTY AND REALTY OF THE UNITED STATES GOVERNMENT AS OF JUNE 30, 1957

98914—57——2

Grand Recapitulation of the Personalty and Realty of the U. S. Government (Executive Agencies, Offices, and Establishments of the Government, Including the Department of Defense) as of June 30, 1957

Corps of Engineers, civil functions (personalty)	184, 200
Grand total	187, 017, 524

Note.—The June 30, 1956, property inventory report listed a grand total of personalty amounting to $179,410,496,000. Figures in this property inventory report represent an increase, as of June 30, 1957, in personal assets amounting to $7, 607, 028, 000.

Treasury Department

Washington, D. C.

Summary Statement

In a letter to the Secretary of the Treasury, dated January 31, 1957, William L. Dawson, chairman, Committee on Government Operations, House of Representatives, requested that the Treasury Department obtain data on personal property at acquisition cost value as of June 30, 1957, from Government departments and agencies in a manner similar to that employed last year; there was also requested data covering Federal investments in related areas covering real estate. The Department of Defense has reported the greater part of its personal property direct to the committee and it is incorporated in another section of this report. Certain personal property of the Department of Defense consisting of cash with disbursing officers, receivables, advances to contractors, and certain progress payments, are included in this section of the report.

The Statement of Personal Property of the United States as of June 30, 1957, has been prepared by the Treasury Department on the basis of asset statements received from all Government agencies. In all, there were 144 agencies reporting which furnished 227 asset statements. These statements were prepared in accordance with the requirements of Supplement No. 1 to Circular No. 966, dated June 1, 1956, which requested all executive agencies to furnish a statement of assets as of June 30 of each fiscal year. A copy of this circular and the instructions covering the preparation of the asset statement are included as part of the Treasury report to the committee. There is also included a statement of related real property of selected agencies other than the Department of Defense as of June 30, 1957.

There was complete cooperation and assistance received from all reporting agencies in furnishing to the Treasury Department data on assets held by each respective agency. A comparative analysis of the personal property of the United States Government, excluding the greater part of the Department of Defense which is included elsewhere in this report, is as follows:

Comparative figures on personal property of the U. S. Government (excluding the greater part of the Department of Defense shown elsewhere in this report) as of June 30, 1957 and 1956

[In thousands of dollars]

Classification	June 30, 1957	June 30, 1956	Increase, 1957 over 1956	Decrease, 1957 over 1956
Cash on hand, in banks, etc	$6,397,399	$7,403,451		$1,006,052
Investments in securities (excluding public debt securities)	3,942,357	3,811,514	$130,843	
Accounts and notes receivable	6,555,311	6,573,861		18,550
Commodities for sale	5,505,147	6,135,904		630,757
Work in process	1,593,839	1,456,451	137,388	
Materials and supplies	7,530,651	6,793,807	736,844	
Loans receivable	17,679,989	18,795,985		1,115,996
Machinery and equipment	10,558,292	10,551,056	7,236	
Other assets	9,731,339	6,539,267	3,192,072	
Total	69,494,324	68,061,296	4,204,383	2,771,355

Note.—All assets herein reported are shown in gross amounts with no deductions for allowances for losses and depreciation. Only wholly Government-owned corporation assets and other wholly-owned assets are included. Assets held under trust arrangements and interagency assets including public debt securities owned are excluded. The assets are in the main valued at acquisition cost (known or estimated).

The table shows a net increase of personal property in the amount of $1.433 billion held by all agencies of the Government, excluding that reported by the Department of Defense in another section of this report. The major increases in assets represent the inclusion of foreign currency balances in the amount of $1.479 billion under other assets and increases in Department of Defense personal property included in this report of approximately $1.711 billion, represented mainly by increases in certain progress payments. The major decreases in assets are represented principally by the decrease of $957 million in the account of the Treasurer of the United States and $898 million of loans receivable of the Federal intermediate-credit banks which were transferred from a wholly owned status to a mixed ownership or Government-sponsored category.

The largest single asset shown in this statement is that of loans outstanding, which amounted to $18 billion. A comparative analysis of these loans by type of loan is as follows:

Comparative figures on gross loans outstanding June 30, 1957 and 1956

[In thousands of dollars]

Type of loan	Amount outstanding June 30, 1957	Amount outstanding June 30, 1956	Increase or decrease (−) 1957 over 1956
To aid agriculture	$5,053,579	$6,407,121	−$1,353,542
To aid houseowners	3,132,341	3,158,708	−26,367
To aid industry	632,846	619,845	13,001
To aid States, Territories, etc	243,657	227,497	16,160
To aid financial institutions	7,227	7,160	67
Foreign loans	8,274,804	8,200,323	74,481
Other loans	335,535	175,331	160,204
Total loans receivable [1]	17,679,989	18,795,985	−1,115,996

[1] Excludes interagency loans.

The decrease of $1.353 billion in loans to aid agriculture was due principally to a transfer of the assets of the Federal intermediate credit banks from a wholly owned status to a mixed-ownership or Government-sponsored category.

Progress is being made in improving accounting and reporting of Federal assets by all United States Government agencies. An additional impetus was given to this program during the year by enactment of Public Law 863, 84th Congress (70 Stat. 783), approved August 1, 1956. Section 106 (c) provides:

> As soon as practicable after the date of enactment of this subsection, the head of each executive agency shall, in accordance with principles and standards prescribed by the Comptroller General, cause the accounts of such agency to be maintained on an accrual basis to show the resources, liabilities, and costs of operations of such agency with a view to facilitating the preparation of cost-based budgets as required by section 216 of the Budget and Accounting Act, 1921, as amended. The accounting system required by this subsection shall include adequate monetary property accounting records as an integral part of the system.

As agencies put into effect the requirements of this section, more meaningful reports will be received in terms of total assets and valuations of such assets.

This act will also give greater coverage in securing the statements required under Treasury Department Circular No. 966. This circular requires business-type financial statements of all Government corporations, certain unincorporated agencies and such other agencies as

are designated by the Treasury Department. The statements required are a "Statement of financial condition," "Statement of income and expense," "Statement of source and application of funds," and "Statement of long-range commitments and contingencies." This regulation provides a framework for ultimately obtaining the data necessary to disclose as complete as may be desirable and practical, the assets and liabilities of the entire Government.

This Treasury circular and the supplement No. 1 thereto which was issued to furnish the data requested by the Committee on Government Operations and the passage of Public Law 863 will furnish the basis for reporting the assets of the United States Government on a consistent basis and from figures anchored into accounts maintained in accordance with the principles and standards prescribed by the General Accounting Office. The work of the Committee on Government Operations in securing reporting on all assets of the Government has furnished another impetus in improving the quality of the records being maintained and the reports being rendered by various agencies of the Government.

Statement on Personal Property of the U. S. Government as of June 30, 1957

[1] Includes materials held for national defense.

[2] Excludes loans guaranteed by the Commodity Credit Corporation amounting to $360,455,322.

[3] Includes certain figures on personal property for the Department of Defense not included under the special section of real and personal property of that Department in this report.

[4] Except with respect to the indebtedness of the Government of Finland ($6,373,485), this does not include the principal of World War I debt accounts ($11,427,523,084) on which payments have not been received since 1933.

[5] Does not include an amount of $28,101,644 representing loans to various States pursuant to the act approved June 23, 1836, on which no payments have been received.

[6] Foreign currencies in the amount of $1,479,636,000, included in his figure, have been evaluated either at the market rate in effect on June 30, 1957, or at the rate at which acquired, depending upon the ultimate ultilization of these foreign currencies. These currencies have been generated pursuant to various Government programs, but principally in the sale of surplus agricultural commodities abroad pursuant to title I, Public Law 480, Agricultural Trade Development and Assistance Act of 1954 (68 Stat. 455), as amended.

[7] Excludes guaranteed loans amounting to $25,433,185.

NOTE.—All assets herein reported are shown in gross amounts, with no deductions for allowances for losses and depreciation. Only wholly Government-owned corporation assets and other wholly owned assets are included. Assets held under trust arrangements and interagency assets, including public debt securities owned, are excluded. The assets are, in the main, valued at acquisition cost (known or estimated).

NOTE.—All assets herein reported are shown in gross amounts, with no deductions for allowances for losses and depreciation. Only wholly Government-owned corporation assets and other wholly owned assets are included. Assets held under trust arrangements and interagency assets, including public debt securities owned, are excluded. The assets are, in the main, valued at acquisition cost (known or estimated).

*Less than $500.

[1] Includes materials held for national defense.

[2] Excludes loans guaranteed by the Commodity Credit Corporation amounting to $360,455,322.

[3] Includes certain figures on personal property for the Department of Defense not included under the special section of real and personal property of that Department in this report.

[4] Foreign currencies have been evaluated either at the market rate in effect on June 30, 1957, or at the rate at which acquired, depending upon the ultimate utilization of these foreign currencies. These currencies have been generated pursuant to various Government programs, but principally in the sale of surplus agricultural commodities abroad pursuant to title I, Public Law 480, Agricultural Trade Development and Assistance Act of 1954 (68 Stat. 455), as amended.

[5] Except with respect to the indebtedness of the Government of Finland ($6,373,485), this does not include the principal of World War I debt accounts ($11,427,523,084) on which payments have not been received since 1933.

[6] Does not include an amount of $28,101,644 representing loans to various States pursuant to the act approved June 23, 1836, on which no payments have been received.

[7] Excludes guaranteed loans amounting to $25,433,185.

TREASURY DEPARTMENT

FISCAL SERVICE

Washington

REGULATION RELATING

TO THE SUBMISSION OF CERTAIN

FINANCIAL STATEMENTS BY GOVERNMENT AGENCIES

1956
Department Circular No. 966
Supplement No. 1

Fiscal Service
Bureau of Accounts

TREASURY DEPARTMENT,
OFFICE OF THE SECRETARY,
Washington, D. C., June 1, 1956.

To Heads of Departments and Agencies and Others Concerned:

The Treasury Department has been requested to furnish the Committee on Government Operations, House of Representatives, with information on properties and assets of the United States Government in connection with the committee's responsibilities for conducting a continuing study of the assets of the Government.

Accordingly, Department Circular No. 966, dated January 30, 1956, is amended as follows:

SCOPE

1. Paragraph 3 is amended by adding the following subparagraph d:

"d. Each executive agency and activity not included in the preceding subparagraphs."

PERIODIC REPORTS REQUIRED

2. The first sentence in paragraph 6 is amended to read as follows:

"Agencies responsible for the administration of corporate or noncorporate activities of the type specified in subparagraphs a, b, and c of paragraph 3 shall furnish all of the following periodic financial statements for each such activity whereas agencies referred to in subparagraph d or paragraph 3 are requested to furnish only the Statement of Financial Condition referred to in subparagraph a of this paragraph."

EFFECTIVE DATE

3. This supplement is effective immediately.

W. RANDOLPH BURGESS,
Acting Secretary of the Treasury.

TREASURY DEPARTMENT

FISCAL SERVICE

Washington

INSTRUCTIONS UNDER SUPPLEMENT NO. 1, TREASURY DEPARTMENT CIRCULAR NO. 966

Relating to the submission of certain financial statements by Government agencies

AUTHORITY FOR INSTRUCTIONS

1. These instructions are issued pursuant to Supplement No. 1, dated June 1, 1956, to Treasury Department Circular No. 966 of January 30, 1956, which requires all executive agencies not heretofore reporting under this regulation to furnish the Treasury Statements of Financial Condition.

AGENCY LIAISON

2. All questions pertaining to the regulations or these instructions should be submitted to the Bureau of Accounts, Treasury Department.

COVERAGE OF REPORTS

3. The reports required shall cover all programs and activities under the control of the agency reporting including those operations conducted in the Territories or overseas. Trust programs or activities will be reported separately and identified as such. Agencies maintaining accounts at the bureau level will submit individual bureau reports without consolidation. Assets and liabilities accounted for at the departmental level and not included in the individual bureau reports should be reported separately so that all assets of the department will be included.

REPORTS REQUIRED

4. Executive agencies now reporting under Department Circular No. 966 will continue to do so in accordance with the provisions of the circular, and instructions issued pursuant thereto, except that an additional copy of the Statement of Financial Condition as of the end of each fiscal year and each schedule supporting such statement shall be submitted to the Treasury Department. All other appropriation and fund account activities not now being reported upon quarterly under Department Circular No. 966 shall be reported upon on a consolidated "Statement of Financial Condition," Standard Form 220, insofar as practicable, in accordance with the requirements of Section II of the instructions issued under Treasury Department Circular No. 966 with the following exceptions:

a. Supplemental schedules 1 through 5 supporting the Statement of Financial Condition will not be required. However, the supplementary statement indicating the basis of figures and special accounting practices required by paragraph 6 of the instructions shall be submitted for all activities and funds reported. Such supplementary statement may be furnished by November 1, if any agency finds that additional time is needed for its preparation.

b. In lieu of reporting "Net Investment" as required by paragraphs 30 through 34 of the instructions, line 68 may be used for reporting the amount of "Unexpended Appropriations" and line 69 may be used for reporting "Invested and Donated Capital" or its equivalent. Such titles shall be typed in.

c. It is recognized that some agencies, having primarily administrative-type activities may not yet have developed their formal accounting procedures to provide balance sheet types of financial statements. For such agencies only the "Asset" side of the Statement is required at this time. However, those agencies not reporting a complete "Statement of Financial Condition" should advise the Treasury as to the probable date that such Statements can be expected.

d. An original and one copy of each report shall be submitted to the Bureau of Accounts, Treasury Department, as of June 30 of each fiscal year as soon thereafter as possible but no later than the following September 30. Two additional copies should be prepared and submitted directly to the Bureau of the Budget.

LAND, STRUCTURES, AND EQUIPMENT

5. That part of paragraph 21 of the instructions relating to the reporting of buildings, structures and facilities in process of construction is amended to add to the last sentence "and will be reported and so identified on line 36 of Form 220 rather than on lines 30 and 31."

SUPPLY OF FORMS

6. Standard Form 220 (Treasury Department Circular No. 966) will be used by reporting agencies and may be obtained through the supply facilities of the General Services Administration.

BASIS OF REPORTS

7. The monetary values reported shall be in accordance with the requirements of Department Circular No. 966 in all cases where accounts are maintained. Where accounts are not maintained such values may be determined from other records or on the basis of estimates according to the best information obtainable. When estimates are used in any line item "Est." shall be typed after the line title.

AGREEMENT WITH OTHER REPORTS

8. In all cases where similar information is being reported as of the same date to committees of Congress, other Government offices or agencies such as the Bureau of the Budget, the General Services Administration, or published in reports of the agency, care must be exercised by the reporting agency to insure agreement of the data submitted. As a specific example, the values reported for (1) land, (2) buildings, and (3) structures and facilities shall be determined in accordance with General Services Administration Circular No. 80, as supplemented, and must agree with the total of the reports rendered to that agency on an installation basis. For treatment of the costs of buildings, structures and facilities under construction not reported to the General Services Administration but included in this

report see paragraph 5 of these instructions. Those agencies reporting on public domain to the House Committee on Government Operations, should furnish a copy of each such report to the Treasury.

EFFECTIVE DATE

9. These instructions shall be effective with the reports to be submitted as of June 30, 1956.

W. T. HEFFELFINGER,
Fiscal Assistant Secretary.

TREASURY DEPARTMENT
Washington

REGULATION RELATING TO THE SUBMISSION OF BUSINESS-TYPE FINANCIAL STATEMENTS BY GOVERNMENT CORPORATIONS AND CERTAIN UNINCORPORATED AGENCIES

1956
Department Circular No. 966

Fiscal Service
Bureau of Accounts

TREASURY DEPARTMENT,
OFFICE OF THE SECRETARY,
Washington, D. C., January 30, 1956.

To Heads of Departments and Agencies and Others Concerned:

PURPOSE OF REGULATION

1. The financial statements and related information to be submitted under these regulations are required to furnish financial information for use by the Treasury Department in discharging its responsibility under the Budget and Accounting Procedures Act of 1950 for compilation of overall financial reports of the Government, and for use by the Bureau of the Budget in following through with the budgetary programs of the reporting agencies.

AUTHORITY FOR REGULATION

2. This regulation is issued pursuant to Section 114 of the Budget and Accounting Procedures Act of 1950 (31 U. S. C. 66b) which authorizes the Secretary of the Treasury to require from agencies reports and information for the effective performance of his responsibility for preparing such reports for the information of the President, the Congress, and the public as will present the results of the financial operations of the Government. As authorized by said section, the regulation provides for the furnishing of such financial data as are required by the Director of the Bureau of the Budget.

SCOPE OF REGULATION

3. This regulation requires the submission of financial statements by corporate and non-corporate Government agencies of the following character:

a. All wholly owned and mixed ownership Government corporations specifically included in the Government Corporation Control Act and amendments thereto, or subsequently brought under the provisions of that Act.

b. All other activities of the Government operating as revolving funds (accounts symbolized 4000–4999 and 8400–8499 by the Treasury Department), for which business-type public enterprise or intragovernmental fund budgets are required by the Bureau of the Budget.

c. Other activities or agencies (1) which are of a business-type nature; or (2) whose operations, services, or functions are largely self-liquidating or primarily of a revenue producing nature; or (3) whose operations result in the accumulation of substantial inventories, investments or other recoverable assets. Agencies and other activities to report under this category will be designated by the Fiscal Assistant Secretary of the Treasury.

ISSUANCE OF INSTRUCTIONS

4. Financial statements and related information under this regulation shall be prepared and submitted by the agencies concerned, in the form and the manner prescribed in the procedural instructions issued by the Fiscal Assistant Secretary of the Treasury.

WAIVERS

5. The Fiscal Assistant Secretary of the Treasury is authorized to waive the provisions of this regulation in whole or in part as to any agency or activity when it is determined that full compliance by such agency or activity is not necessary to accomplish the overall objective to obtain information required for the preparation of financial reports or for the purposes of the Bureau of the Budget.

PERIODIC REPORTS REQUIRED

6. Agencies responsible for the administration of corporate or non-corporate activities of the type specified in paragraph 3 shall furnish for each such activity periodic financial statements, as follows:

a. A *Statement of Financial Condition* showing the assets, liabilities, and investments of the United States Government in the enterprise.

b. A *Statement of Income and Expense and Changes in Accumulated Net Income (or Deficit)* showing in condensed form the earnings or losses arising from operations and changes in accumulated net income (or deficit) for the fiscal year to the end of the reporting period.

c. A *Statement of Sources and Application of Funds* showing the manner in which funds have been applied to the acquisition of assets, to expenses, and to retirement of borrowings and capital; the manner in which funds have been provided by the realization of assets, by income, by borrowings and capital contributions; and from which the net effect of such operations on the budget for the Government as a whole can be determined.

d. A *Statement of Long-range Commitments and Contingencies* containing a short description of the program and a statement showing the gross amount outstanding of loans guaranteed or insured by the reporting agency, insurance programs, obligations issued on credit of or guaranteed by the United States, long-range commitments and other contingent liabilities, and assets held as offsets to such liabilities.

ACCOUNTING SUPPORT FOR REPORTS

7. One of the principles upon which the Treasury Department is proceeding in connection with the responsibility for preparing central financial reports is that such reports should present fairly the financial condition and results of operations of the agencies as shown by their books and records. Hence, agencies shall furnish the Treasury Department with such information regarding the accounting basis for their reports submitted under this regulation, as may be required for proper evaluation of such reports.

EFFECTIVE DATE

8. This regulation, with the concurrence of the Director of the Bureau of the Budget, supersedes Budget-Treasury Regulation No. 3, dated September 1, 1944, and revised March 15, 1947, issued pursuant to Executive Order No. 8512 of August 13, 1940, as amended by Executive Order No. 9084 of March 3, 1942, and shall be effective with the period ending March 31, 1956.

W. RANDOLPH BURGESS,
Acting Secretary of the Treasury.

TREASURY DEPARTMENT
FISCAL SERVICE
Washington

INSTRUCTIONS UNDER TREASURY DEPARTMENT CIRCULAR NO. 966 Relating to the submission of business-type financial statements by Government corporations and certain unincorporated agencies

I. GENERAL

AUTHORITY FOR INSTRUCTIONS

1. These instructions are issued pursuant to Treasury Department Circular No. 966, issued under the authority contained in Section 114 of the Budget and Accounting Procedures Act of 1950 (31 U. S. C. 66b).

SCOPE OF INSTRUCTIONS

2. These instructions explain the kinds of reports and other information to be furnished to the Treasury Department under the regulation; the periods of time to which the reports shall relate; and other reporting specifications, including information concerning accounting support for the data reported.

3. All questions pertaining to the regulations or these instructions should be submitted to the Bureau of Accounts, Treasury Department.

KINDS OF REPORTS AND INFORMATION REQUIRED

4. The financial statements shall be submitted on the following standard forms:

Standard Form 220. Statement of Financial Condition
Standard Form 221. Statement of Income and Expense

Standard Form 222. Statement of Sources and Application of Funds
Standard Form 223. Statement of Long-range Commitments and Contingencies

The printed forms may be purchased through the General Services Administration. Supporting schedules to be submitted as hereinafter required should be prepared or reproduced on letter size (8 by 10½ inches) paper with appropriate title and references. Minus or "red" figures should be indicated by an asterisk (*). A duly authorized officer of the reporting agency will sign the original Standard Form 221. The copies need not be signed but should bear the name of the signing officer.

5. Where there are several regional corporations or institutions in a financial system performing identical functions, such as the twelve banks of the Federal intermediate credit bank system, consolidated statements shall be prepared and submitted for the system. Separate statements for each regional corporation or institution are not required. Where a single fund operated by an unincorporated agency covers activities made up of unlike functions, agencies may be requested to submit separate statements on a program or functional basis.

6. Each item group reported on the Statement of Financial Condition and the Statement of Long-range Commitments and Contingencies submitted for the last quarter in each fiscal year, should be described, in reasonable detail, outlining the accounting principles followed in reporting each item group on these statements unless such descriptive material is included in annual reports of the agencies submitted under paragraph 8 below. The description of the item groups should cover such subjects as (1) nature of accounts, e. g., whether on a cash, accrual, or modified accrual basis; (2) basis of reporting, e. g., whether at cost or some other value; (3) methods used in determining and reporting allowances for losses; (4) extent of departure from the account classifications provided in the regulation; and (5) extent, if any, of departure in reporting from the preceding year. The descriptive matter should be presented in the same order in which the respective item groups appear in the statements.

7. *Reporting Periods and Distribution of Statements*

Statement or Schedule	Frequency	Original to Treasury	Two copies to Budget Bureau
Forms:			
Standard Form 220	Quarterly	X	X
Standard Form 221	Quarterly	X	X
Standard Form 222	Quarterly	X	X
Standard Form 223	Semiannually	X	X
Schedules:			
1. Cash and Fund Balances	Quarterly	X	X
1a. Cash in Banks	Annually	X	
2. Investments in Public Debt Securities	Monthly	X	
3. Investments Other Than Public Debt Securities	Quarterly	X	X
4. Loans Receivable—Other Loans	Quarterly	X	X
5. Bonds, Debentures, and Notes Payable	Quarterly	X	X
Description of Items	Annually	X	X

The statements due quarterly as of the quarters ending September 30, December 31, March 31, and June 30 of each year shall be submitted on or before the 15th of the second month following those dates, except that all statements required at the fiscal year end should be submitted as soon as possible following the close of the fiscal year, but not later than the following September 30. Schedule 2—Investments in Public Debt Securities, provided for in paragraph 14f, shall be submitted each month within twenty days after the month for which it is rendered. The original of each statement and schedule shall be submitted to:

Report Preparation Branch
Division of Central Reports
Bureau of Accounts
Treasury Department

Two copies of each statement indicated above for the Bureau of the Budget shall be submitted directly to that agency at the same time the originals are sent to the Treasury.

8. Any corporation or agency required to report under this regulation, which prepares an annual financial report for publication or general distribution outside the agency, shall furnish one copy thereof to the Division of Central Reports, Bureau of Accounts, Treasury Department and two copies to the Bureau of the Budget at the time the report becomes available for distribution.

ACCOUNTING SUPPORT FOR REPORTS

9. As stated in the regulation, one of the principles upon which the Treasury Department is proceeding in connection with its responsibility for preparing central financial reports is that such reports present fairly the financial condition and results of operations of agencies, as shown by their books and records. The statements for the period ending June 30 should be in agreement with the corresponding statements submitted annually to the Bureau of the Budget for the last completed fiscal year, recognizing that the arrangement and grouping of items in accordance with the prescribed forms of this regulation may not provide a breakdown that is identical in all respects with that required for the corresponding Budget statements.

EFFECTIVE DATE

10. These procedural instructions shall be effective with the reports to be submitted for the quarter ending March 31, 1956.

II. STATEMENT OF FINANCIAL CONDITION

GENERAL

11. The *Statement of Financial Condition* (*Standard Form 220*) will show in condensed form the assets, liabilities, investment of the United States Government, and other capital of each of the reporting corporations and enterprises. The items to be reported under each classification are described below with appropriate reference to the line number on Standard Form 220. For purposes of uniformity, reporting agencies will adhere to the group classifications provided. Certain group classifications contain blank lines for reporting items to be determined and titled by the reporting agency. Supporting

detail for certain items shall be furnished in supplemental schedules as indicated. Other supplemental schedules in addition to those specified herein may on occasion be requested from selected reporting agencies.

12. *Interagency Items.*—Interagency receivables and payables representing amounts due to and from other Federal Government agencies on open accounts, notes, or similar indebtedness will be reported on the separate lines provided therefor under the appropriate asset and liability groups on the Statement of Financial Condition. Any reporting agency holding securities or a proprietory interest in the capital of another Government agency will report such holding under investments and include the same as a separate item in Schedule 3 (see paragraph 14f). Bonds, debentures, and notes payable of the reporting agency which are payable to other Government agencies shall be reflected on Schedule 5.

REPORTING OF ASSETS

13. *Cash and Fund Balances.*—Report under this group cash belonging to the reporting agency or held for the account of others, including unexpended balances of funds made available by appropriation. Balances on deposit in banks and in the Treasury should be reflected on a basis of confirmed deposits and checks issued and consistent with the basis for determining unexpended balances of appropriations and funds in the Treasury central accounts. The itemization hereunder will show:

a. *Cash in banks (line 1).*—Report on this line cash in commercial banks which is subject to withdrawal by the reporting agency for regular operations.

b. *Cash on hand and in transit (line 2).*—Report on this line cash on hand. Imprest funds and advances with agent cashiers will be included only in cases where the amount of the initial advance was made from a commercial bank account or was treated as a reduction in the fund balance available with the United States Treasury. Imprest funds, advances to agent cashiers, and all other cash on hand not related to specific appropriations or funds but treated as part of the accountability of disbursing officers shall not be included. This item will also include collections undeposited and deposits for which certificates of deposit have not been confirmed by depositaries as of the close of the period except where such amounts have been included in the accountability of disbursing officers.

c. *Fund balances with United States Treasury.*

(1) *Operating funds (line 3).*—Report on this line (a) amounts available in general, special, and revolving fund accounts including all amounts on deposit in corporation checking accounts with the Treasurer of the United States and on deposit with the Treasurer as special agent for the payment of matured principal and interest of bonds and debentures; and (b) unexpended balances of allocated working fund advances *made to* other agencies.

(2) *Trust and deposit funds (line 4).*—Report on this line balances of trust and deposit fund accounts which have been segregated as such under separate symbols in the Treasury and for which the liabilities are included on lines 46 and 47.

(3) *Allocations from other agencies (line 5).*—Report on this line unexpended balances of allocation and allocated working fund advances received *from* other agencies, regardless of the type of fund account from which advanced (consolidated reports prepared by the Treasury will eliminate this line together with the corresponding liability).

d. *Supplemental Schedule 1.*—A schedule showing the distribution by appropriation and fund account symbol of the amounts reported under "Cash and Fund Balances," by line item, will be presented in accordance with the format illustrated. In those instances where the statement covers only a single fund, the symbol of the fund may be shown in the stub for the appropriate line in lieu of submitting a separate schedule. Once each year, as of June 30, the amount of "Cash in banks" (line 1) will be itemized by bank, location, and amount in accordance with the format illustrated as Schedule 1a.

14. *Investments.*—Report under this group securities acquired and held for investment purposes. The itemization hereunder will show:

a. *Public debt securities (par value) (line 6).*—Report on this line the par value of investments in bonds, notes, bills or other public debt obligations issued by the United States.

b. *Securities of wholly owned Government enterprises (line 7).*—Report on this line investments in securities of wholly owned Government enterprises, including evidences of obligations, capital stock and paid-in surplus. Such securities shall be reported at par.

c. *Unamortized premium or discount (line 8).*—Report on this line the amount of unamortized premium (+) or discount (−) applicable to the securities reported on lines 6 and 7.

d. *Other securities (line 9).*—Report on this line all securities acquired and held for investment purposes other than those reported on lines 6 and 7 above. Such securities shall be reported at par, plus or minus unamortized premium or discount, if any.

e. *Allowance for losses (line 10).*—Report on this line the estimated losses on "Other securities" line 9.

f. *Supplemental Schedules 2 and 3.*—The supporting data for "Public debt securities (par value)" (line 6) will be prepared *monthly* as illustrated by Schedule 2 and submitted each month within 20 days after the month for which it is rendered. Data supporting "Securities of wholly owned Government enterprises" (line 7) and "Other securities" (line 9) will be prepared *quarterly* to accompany the Statement of Financial Condition. The amounts of investments shown on line 7 shall be supported in detail in Schedule 3 showing for each issue, the name of the issuing agency, the date of the issue, the interest rate, the call and maturity dates, the par and book values, and whether guaranteed or not guaranteed by the United States. Investments reported on line 9 shall be shown on Schedule 3 itemized to show securities of mixed-ownership and Government-sponsored corporations separately from securities in other general classifications.

15. *Advances to Contractors and Agents.*—Report under this group the amount of unapplied advances outstanding with contractors or agents. The itemization hereunder will show:

98914—57——4

a. *Government agencies (line 11).*—Report on this line advances made to other Government agencies net of the unexpended balances remaining in allocated working funds advanced to such agencies. (Since an advancing agency normally debits an advance account for the full amount of advances made, a reporting adjustment will be necessary at the end of each period transferring from this account to "Operating funds" line 3, an amount equal to the unexpended balance remaining in any allocated working fund held by the receiving agency. No such adjustment is necessary where the advance is made to a revolving fund or consolidated working fund).

b. *Other (line 12).*—Report on this line the balance of advances made to private contractors and other individuals, except where such advances are included in the accountability of a disbursing officer.

16. *Accounts and Notes Receivable.*—Report under this group accounts and notes receivable. Notes receivable under this item normally should include only those short-term notes that have been accepted in liquidation of open accounts as distinguished from loans made in connection with authorized lending programs which should be reported under "Loans Receivable." The itemization hereunder will show:

a. *Government agencies (line 13).*—Report on this line receivables due from other Government agencies, exclusive of advances which are to be reported on line 11 above.

b. *Other (line 14).*—Report on this line the amount of accounts and notes receivable due from other than Government agencies, exclusive of advances which are to be reported on line 12 above.

c. *Allowance for losses (line 15).*—Report on this line the estimated losses on "Accounts and Notes Receivable—Other."

17. *Inventories.*—Report under this group inventories purchased, produced or acquired by forfeiture of loan collateral or donation. The itemization hereunder will show:

a. *Commodities for sale, finished goods, etc. (line 16).*—Report on this line commodities, completed work not yet delivered or finished goods available for sale or delivery though sometimes used by the reporting agency.

b. *Work-in-process (line 17).*—Report on this line the value of work-in-process.

c. *Materials and supplies (line 18).*—Report on this line supplies or materials to be used in the manufacture of a finished product or charged to expense when used. (Supplies normally charged to expense at time of purchase shall not be included.)

d. *Allowance for losses (line 19).*—Report on this line the estimated losses which may be realized on the disposition of the above inventories.

18. *Accrued Interest Receivable.*—Report under this group accrued interest receivable. The itemization hereunder will show:

a. *On public debt securities (line 20).*—Report on this line the amount of accrued interest receivable on direct obligations of the United States issued by the Treasury. The accrual should be computed on the same basis that the Treasury Department computes the accrued interest liability, as set forth in Treasury Department Circular No. 300, Revised, dated April 30, 1955.

b. *On securities of other agencies (line 21).*—Report on this line accrued interest on securities of other Government agencies. This item would include interest on obligations issued by other Government agencies whether guaranteed or not guaranteed by the United States.

c. *Other (line 22).*—Report on this line all accrued interest receivable not reported on lines 20 and 21.

19. Loans Receivable.—Report in this group the balance of outstanding loans receivable made, purchased or acquired by rediscount. The amounts reported hereunder will include matured and unmatured principal; extensions, and advances to borrowers. Deposits of borrowers held subject to refund or disbursement on behalf of the borrowers will be reported under the group "Trust and Deposit Liabilities." The itemization hereunder will show:

a. *Government agencies (line 23).*—Report on this line loans to Government agencies, which will usually be evidenced by notes receivable or other similar obligations.

b. *Other (line 24).*—Report on this line loans to other than Government agencies made pursuant to authorized lending programs of the agency. The amount of other loans will be supported by supplemental Schedule 4, showing the following information:

(1) *Loans to aid agriculture.*—Report under this item loans to farmers and to institutions whose primary purpose is to aid agriculture. In this classification will be included loans to agricultural credit corporations; cooperative associations; crop, livestock, and commodity loans; farm mortgage loans; and similar loans.

(2) *Loans to aid homeowners.*—Report under this item loans to homeowners and to institutions whose primary purpose is to aid homeowners. In this classification will be included mortgage loans; reconditioning loans; loans to savings and loan associations; and similar loans.

(3) *Loans to aid industry.*—Report under this item loans to industrial and commercial enterprises. In this classification will be included loans to railroads, manufacturing concerns, and public utilities; ship construction and reconditioning loans; and similar loans.

(4) *Loans to aid States, Territories, etc.*—Report under this item loans to public bodies, such as States, Territories, possessions, municipalities, and similar governmental subdivisions.

(5) *Loans to aid financial institutions.*—Report under this item loans to general financial institutions such as banks, insurance companies, loan companies, and other similar financial institutions.

(6) *Foreign loans.*—Report under this item loans to foreign governments and private entities in foreign countries.

(7) *Other loans.*—Report under this item loans which cannot be appropriately classified under any of the previous loan classifications.

c. *Allowance for losses (line 25).*—Report on this line the estimated losses on "Loans Receivable—Other" (line 24).

20. *Acquired Security and Collateral.*—Report under this item real estate and other mortgage property and pledged collateral acquired and held for sale, including real estate acquired subject to redemption. This acquired security or collateral should be reported net of prior mortgages or liens not assumed. Where the reporting agency has assumed any mortgages or liens in connection with the acquisition of security or collateral, the value of such assets will be reported gross and the mortgage or lien assumed will be reported under "Other Liabilities" (line 52 or 53).

a. *Real estate (line 26).*—Report on this line real estate, including improvements, acquired in the liquidation of loans.

b. *Other (line 27).*—Report on this line other types of security and collateral acquired in the liquidation of loans where the collateral acquired is not commingled in the accounts of the agency with similar items purchased.

c. *Allowance for losses (line 28).*—Report on this line the estimated losses on "Acquired Security and Collateral."

21. *Land, Structures, and Equipment.*—Report under this group the cost of real and personal property acquired by purchase, donation or other methods of acquisition. Residential and farm properties, and other real estate and improvements acquired through foreclosure incident to a lending operation or other Federal-aid projects will not be reported in this section but will be included on line 26. Real property shall be determined for lines 29, 30, and 31 in accordance with General Services Administration Circular No. 80, as supplemented, except that buildings, structures and facilities in process of construction shall be *included* whether or not "available for service" as of the reporting date.

Line 32 "Leasehold improvements" shall include the cost of easements, rights-of-way, and leasehold improvements to land, buildings, or structures, and facilities occupied by the Government as lessee. However, cost of Government-owned buildings, structures, and facilities located on leased land shall be included on lines 30 and 31 as appropriate.

Line 33 "Machinery and equipment" snall include the cost of machinery and processing equipment, motor vehicles, office machinery, furniture, etc.

Accumulated depreciation (line 34) should represent the amount of depreciation (including amortization of leasehold improvements) applicable to the properties listed which has been charged to costs or depreciation expense.

22. *Other Assets.*—Report under this group all other assets which cannot be properly classified under any of the previous asset groups. Real estate or instalment sales contracts, purchase money mortgages, and similar long-term paper acquired in the sale of acquired security or collateral or other owned property will be reported under this group.

a. *Deferred and undistributed charges (line 35).*—Report on this line prepaid expenses, unamortized discount on bonds or debentures issued and outstanding and other deferred charges applicable to the operations of future periods as well as debits arising from disbursements or other charges, the distribution or final disposition of which has not been made.

b. *Blank lines* (*lines 36 and 37*).—Report on these lines, with appropriate descriptive titles, any other assets which cannot be properly classified under any of the previous asset groups.

c. *Allowance for losses* (*line 38*).—Report on this line the estimated losses on "Other Assets."

REPORTING OF LIABILITIES

23. *Accounts Payable.*—Report under this group accounts payable consisting of amounts owed to creditors on open account (including voucher schedules not yet accomplished by disbursing officers). The itemization under this group will show:

a. *Government agencies* (*line 40*).

b. *Other* (*line 41*).

24. *Accrued Liabilities.*—Report under this group accrued interest and other accrued liabilities. Insofar as practicable, similar liabilities which have matured should be reported under "Accounts Payable." The itemization hereunder will show:

a. *Government agencies* (*line 42*).—Report on this line accrued liabilities due Government agencies including accrued interest due the Treasury.

b. *Other* (*line 43*).—Report on this line all other accrued liabilities, including interest on obligations issued to the public.

25. *Advances from.*—Report under this group the amount of unapplied advance payments received for goods or services to be furnished by the reporting agency. The itemization hereunder will show:

a. *Government agencies* (*line 44*).—Report on this line the amount due Government agencies for advance payments received, including any unliquidated liability for goods and services in connection with an advance of funds under section 601 of the Economy Act or similar legislation (regardless of the type of fund from which advanced).

b. *Other* (*line 45*).—Report on this line all other liabilities arising from advance payments for goods and services.

26. *Trust and Deposit Liabilities.*—Report under this group the liabilities for amounts held in trust or on deposit (including the unexpended balances of trust fund appropriations) covering such items as cash collateral, proceeds of loans held for the borrowers, time and demand deposits, withholding tax and United States savings bond deductions, undeposited general fund receipts, and other deposits held subject to refund or application. The itemization hereunder will show:

a. *Government agencies* (*line 46*).—Report on this line the trust and deposit liabilities due Government agencies, including such items as withheld Federal taxes and undeposited general fund receipts.

b. *Other* (*line 47*).—Report on this line all other trust and deposit liabilities not recorded under line 46.

27. *Bonds, Debentures, and Notes Payable.*—Report under this group the par value of all outstanding bonds, debentures, notes, and other obligations of a similar character held by the public or other Government agencies (other than the Treasury). The itemization hereunder will show:

a. *Government agencies* (*line 48*).—Report on this line bonds, debentures, notes, etc., issued to other wholly owned Government

corporations and agencies (other than the Treasury). Borrowings from the Treasury are to be reported under "United States Interest."

b. *Other (line 49).*—Report on this line bonds, debentures, notes, etc., issued to other than wholly owned Government corporations and agencies. All marketable obligations shall be reported here even though a portion may have been acquired by another Government agency.

c. *Supplemental Schedule 5.*—Information on the balances reported on these lines will be submitted as illustrated on supplemental Schedule 5 "Bonds, Debentures, and Notes Payable" showing the character, date of issue, the interest rate, the call and maturity dates, the par value of each issue outstanding and whether guaranteed by the United States. The fact that another Government agency may own marketable obligations issued to the public by the reporting agency need not be reported.

28. *Other Liabilities.*—Report under this group deferred and undistributed credits and on the blank lines provided, with appropriate descriptive titles, all liabilities which cannot be properly classified under any of the other liability groups.

a. *Deferred and undistributed credits (line 50).*—Report on this line deferred income, unamortized premium on bonds or debentures issued and outstanding and other credits applicable to operations of future periods as well as items arising from receipts or other credits, the distribution or final disposition of which has not been made.

b. *Accrued annual leave (line 51).*—Report on this line the amount of unpaid annual leave which has been charged to cost.

c. *Blank lines (lines 52 and 53).*—Items relating to loans receivable discounted with recourse, and guaranteed loans or other agreements of a guaranteed nature which are subject to redemption by the reporting agency at the option of the holder should be reported here. Any other liabilities which cannot be classified under any other liability group shall be reported here with appropriate descriptive title.

29. *Reserves.*—Report on blank lines 54 and 55 operating reserves established for deferred maintenance, liability reserves, reserves established for the benefit of equity holders and other similar special reservations of earnings not classified as part of the "Accumulated net income or deficit" of the enterprise.

REPORTING OF NET INVESTMENT—PRIVATE INTEREST

30. *Private Interest.*—Report under this group the amount of capital provided from non-governmental sources and the accumulated income or deficit applicable thereto. The par value of the capital stock held by the public will be reported on line 57, and the accumulated net income or deficit, segregated as between reserved and unreserved, on lines 58 and 59.

REPORTING OF NET INVESTMENT—UNITED STATES INTEREST

31. *Interest-Bearing Investment.*—Report under this group capital stock, paid-in capital, paid-in surplus, advances from revolving funds, bonds, notes, or other capital items provided directly by the United

States Treasury or through other Government agencies where interest is payable, without regard to earnings, to the Treasury or other Government agencies on such capital investment items. The itemization hereunder will show:

a. *Capital stock (line 60).*

b. *Borrowings from Treasury (line 61).*—Report on this line borrowings from Treasury represented by notes, bonds, or any other means of borrowing. The amount of unused borrowing authority remaining available shall be reported as a footnote.

c. *Blank line (line 62).*—Report on this blank line, with appropriate title, any additional items necessary to reflect the proper total interest-bearing investment of the United States Government, including advances from revolving funds, paid-in capital, paid-in surplus, etc. The title "Paid-in capital" or "Paid-in surplus" shall be used only for those items of Government investment specifically identified as such in the legislation authorizing the capitalization. Where a portion of the capital made available by Congress for an item reported on this line is retained by the Treasury in a separate revolving fund or other holding account, the gross amount remaining available shall be reported as a footnote.

32. *Non-interest-bearing investment.*—Report under this group capital stock, paid-in capital, paid-in surplus, advances from revolving funds, bonds, notes, appropriations, or other capital items, which are non-interest bearing, provided directly by the United States Treasury or through other Government agencies, including the capitalization of assets. The itemization hereunder will show:

a. *Capital stock (line 63).*

b. *Borrowings from Treasury (line 64).*—Report on this line borrowings from Treasury represented by notes, bonds, or any other means of borrowing. The amount of unused borrowing authority enacted by the Congress shall be reported as a footnote.

c. *Appropriations.*—Report under this group the cumulative amounts made available through congressional appropriations to finance the activity being reported upon, net of appropriation balances rescinded, transferred to "Payment of Certified Claims" or otherwise returned to the Treasury. Agencies operating from other than revolving funds will show on blank lines 65 and 66 a segregation of appropriations as between the amounts expended and unexpended. Revolving fund enterprises may use blank line 66 for reporting the amount of appropriated funds repaid to the Treasury as a capital transfer in those instances where such presentation is required.

d. *Capitalization of assets (line 67).*—Report on this line the net amount derived through recognition of the capitalized value of property, inventory, and other assets on hand at the inception of the fund, donated to the reporting agency or charged to appropriations other than those included in amounts reported on line 65 or 66 above.

e. *Blank lines (lines 68 through 70).*—Report on these lines with appropriate titles any other segregation of the investment of the Government which by statute or otherwise is required for full disclosure, including advances from revolving funds, paid-in capital, paid-in surplus, etc. The titles "Paid-in capital" or

"Paid-in surplus" shall be used only for those items of Government investment specifically identified as such in the legislation authorizing the capitalization. Where a portion of the capital made available by Congress for an item reported on this line is retained by the Treasury in a separate revolving fund or other holding account, the amount so retained shall be reported as a footnote.

33. *Accumulated Net Income or Deficit.*—Report under this group the accumulated earnings or losses applicable to the "United States Interest," segregated as between reserved earnings as required by statute or otherwise and unreserved earnings or deficit. The itemization hereunder will show:

a. *Non-revenue producing operations (Line 71).*—Report on this line as a deficit (*) item the cumulative net expenses incurred for any programs set up by law to be non-revenue producing and not associated or identified with the regular revenue producing services provided by the agency.

b. *Reserved (Line 72).*—Report on this line the reserves which are established by statute or otherwise from annual earnings. Normally direct charges should not be made to such reserves for losses incurred; such losses should be reflected in the income and expense statement.

c. *Unreserved (line 73).*—Report on this line the cumulative deficit or unreserved surplus resulting from operations.

34. *Deposit of General and Special Fund Revenues (line 74).*—Those enterprises which are not permitted to reuse or hold their receipts but are required to deposit their collections into the Treasury as miscellaneous receipts shall report the cumulative amount of such deposits on this line as a deduction from the investment of United States Interest. This will apply only to enterprises that are financed by other than revolving funds.

Personalty Inventory of the Architect of the Capitol as of June 30, 1957

Properties, under the jurisdiction of the Architect of the Capitol are located in the United States Capitol Building, Senate Office Buildings, House Office Buildings, and Grounds; Capitol Power Plant and Grounds; Library Buildings and Grounds; United States Supreme Court Building and Grounds; and United States Botanic Garden and Nursery.

Office furniture, furnishings, and equipment	$786, 589
Mechanical equipment	454, 543
Supplies and materials (including plant material at Botanic Garden and Nursery)	1, 293, 129
Works of art	1, 420, 219
Total personal property	$3, 954, 480

Personalty Inventory (Under the Jurisdiction) of the Sergeant at Arms of the U. S. Senate as of June 30, 1957

Cash held by disbursing officer	$253, 325. 00
Office supplies and equipment, furniture and carpets	412, 891. 99
Mechanical equipment	1, 540, 003. 85
Total personal property	[1] $2, 206, 220. 84

[1] These figures represent acquisition cost, actual or estimated.

PERSONALTY INVENTORY OF THE OFFICE OF THE CLERK OF THE HOUSE OF REPRESENTATIVES AS OF JUNE 30, 1957

PERSONALTY INVENTORY OF THE OFFICE OF THE CLERK OF THE HOUSE OF REPRESENTATIVES, AS OF JUNE 30, 1957

Cash held by disbursing officer	$95, 685. 57
Furniture and carpeting	1, 793, 848. 41
Supplies and material (for construction and repair of furniture, drapes, venetian blinds, rugs, etc.)	80, 107. 68
Machinery, tools, and accessories (for repair shops)	11, 393. 33
Cleaning and other supplies (for committees and offices in the Capitol)	5, 051. 00
Manual typewriters	260, 797. 16
Electrical and mechanical equipment	1, 265, 531. 00
Stationery room stock	76, 647. 69

REAL AND PERSONAL PROPERTY OF THE DEPARTMENT OF DEFENSE AS OF JUNE 30, 1957

REAL AND PERSONAL PROPERTY OF THE DEPARTMENT OF DEFENSE AS OF JUNE 30, 1957

Summary

This report on the real and personal property of the Department of Defense as of June 30, 1957, has been prepared at the request of the Committee on Government Operations of the House of Representatives. It is somewhat broader in scope and content than the June 30, 1956, report prepared for that committee.

This report covers properties and inventories with an aggregate value of $146.0 billion, including $3.8 billion cost of work in place on military construction in progress. This is the first time that construction in progress has been included in these reports. The total value as reported is exclusive of the value of (1) properties and equipment of the national industrial plant and equipment reserve, which is under the custody of the General Services Administration; (2) supplies and equipment in overseas field Army depots; (3) minor items of equipment issued to using units of the Army; (4) properties and supplies under the jurisdiction of Civil Works Division, Office, Chief of Engineers, Department of the Army.

During fiscal year 1957, the personal property inventory increased by $6.2 billion. Much of this increase resulted from inclusion of Army Korean stocks, further modernization of Navy surface and air fleets, additional Air Force jet aircraft, and inclusion of Air Force aircraft engines held by contractors.

A major step to improve supply system reporting and control was taken during 1956 by prescribing a uniform inventory management reporting system. The Army and the Navy use the stratification provided by this system for their supply system inventories. When the Marine Corps and the Air Force have completely implemented the inventory management report instruction it will be possible to publish a consolidated Department of Defense statement of supply-system inventories based on a uniform pattern of stratification.

The problem of prescribing uniform Department of Defense categories, which appear as lines in the four supply system tables, is being carefully studied. Tentative plans are to report and to review military logistics programs and inventory transactions and assets in terms of supply class groupings of weapons, planes, ships, etc. Under these plans, the groupings would be identical with budget categories and would match weapons and spare parts to the maximum extent practical.

Stock fund inventories totaling $11.0 billion and representing over 20 percent of the total inventories in the military supply systems are summarized in table 29. Stock fund inventories are included in personal property inventory totals. Army and Navy reported increase

in stock fund inventories during fiscal year 1957; Marine Corps and Air Force reported small decreases.

During fiscal year 1957, the real property inventory increased by $2.0 billion, with $1.4 billion of this increase accounted for by the Air Force. The increase in the Air Force real property is due to a more complete reporting coverage and to additional facilities required for the increased number of jet aircraft and the expanding continental defense operations.

Data included in this report of the real and personal property of the Department of Defense show an aggregate value of $146.0 billion as of June 30, 1957. The Department of the Army controlled $38.3 billion of this total, the Department of the Navy $56.7 billion, and the Department of the Air Force $51.0 billion.

The $146.0 billion total includes $24.9 billion of real property inventory, $3.8 billion of construction in progress, and $117.3 billion of personal property.

The personal property total includes $54.1 billion equipment and supplies in the supply system, $57.6 billion military and general equipment issued for use, $5.3 billion production equipment, and, in addition, $0.3 billion inventories in the industrial fund.

The worldwide location of these properties and inventories is presented in summary form in table 1 and graphically in chart 1. There composition by broad types of property is shown in table 2 and chart 2.

Basis of valuation.—Land and buildings and long-life equipment such as ships, are priced at acquisition costs. Acquisition cost of ships, as well as land and buildings, are often substantially below current replacement values. Construction in progress is valued on the basis of cost of materials and labor incorporated in the projects under construction. Inventories of consumable goods are at standard prices, representing replacement cost, or at estimated purchase price.

TABLE 1.—*Summary of property holdings, by location, Department of Defense, as of June 30, 1957*

[Millions of dollars]

Military department and type of property	Total	Continental United States	Territories and possessions	Foreign countries and afloat	In transit

Industrial funds	[5] 305	64	240	1

[1] Excludes personal property inventories under the jurisdiction of Civil Works Division, Office, Chief of Engineers, Department of the Army, in the amount of $184,200,000. Includes $2,000,000 personal property of the Office of the Secretary of Defense.

[2] Excludes real property in the amount of $3,675,000,000 under the jurisdiction of the Civil Works Division, Office, Chief of Engineers, Department of the Army.

[3] Excludes $300,000,000 of work in place on construction under the jurisdiction of the Civil Works Division, Office, Chief of Engineers, Department of the Army.

[4] Includes $328,000,000 property, such as aircraft, engines, and scrap in hands of property disposal officers not otherwise reported.

[5] Consists of raw materials, supplies, work in process, finished goods, excess, and salaries.

The report consists of three parts: Part I—Military Real Property; Part II—Personal Property; and Part III—Progress in Recording and Reporting Inventories. Parts I and II, which contain the accounting-statistical data on inventories, consist of—

Part I. Military Real Property
- Section A. Inventory of Military Real Property
- Section B. Construction in Progress

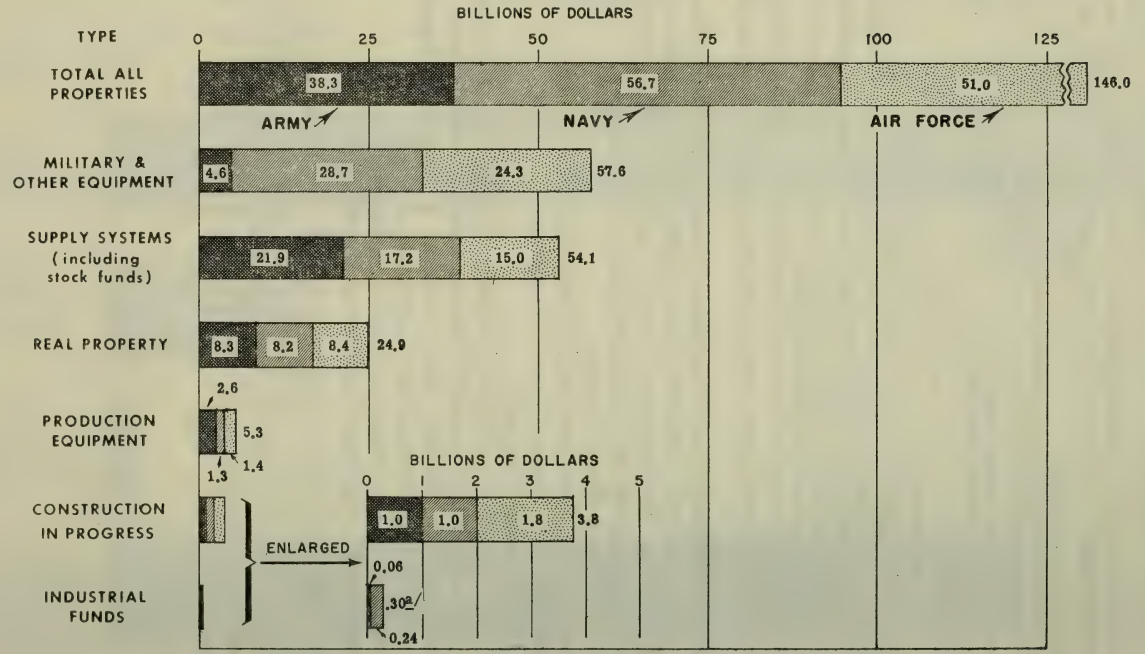

Part II. Personal Property
- Section A. Inventory of Military Equipment and Supplies in the Consolidated Supply Systems and in Stock Funds
- Section B. Military and General Equipment Issued for Use (Including Production Equipment)
- Section C. Inventories Held in Industrial Funds
- Section D. National Industrial Reserve

Although some of the inventories of the Department of Defense contain details which, for reasons of military security, cannot be publicly released, detailed classified data will be made available to appropriate committees of the Congress from time to time, when required.

CHART 2

DOD REAL AND PERSONAL PROPERTIES, BY MAJOR TYPE AND SERVICE

AS OF 30 JUNE 1957

a/ Includes $800 thousand of Air Force industrial fund inventories, not shown.

Part I. Military Real Property

SECTION A. INVENTORY OF MILITARY REAL PROPERTY

1. General

This section of the report presents a summary and a brief analysis of the inventory of military real property as of June 30, 1957. Detailed statistics on civil works property (river and harbor and flood-control property under the jurisdiction of the Secretary of the Army) are not included in this report.

The real property under the control of the military departments is one of the most important assets of the Department of Defense. In order to achieve maximum defense at minimum cost, such real property must be administered in accordance with modern real property management principles. The real property inventory provides information required to achieve management objectives of better utilization, use of existing real property in lieu of new acquisition, and reduction of real property holdings and maintenance costs by effecting prompt disposition of excess property.

The first inventory report of the military departments submitted under uniform instructions (Department of Defense Instruction 4165.14) covered an inventory of January 1, 1954, which was completed in November 1954. Data from this first report and each of the six subsequent inventory reports have been used in the preparation of congressional reports by the Department of Defense and the General Services Administration.

The inventory data covering military real property include land and improvements on such property including installed equipment such as fixed overhead crane-runways, elevators, lavatories, plumbing, and electrical systems. Machine tools and production equipment at such installations, however, are not included.

2. Department of Defense summary

(a) *Cost of property controlled.*—The total cost to the United States Government of real property controlled by the 3 military departments as of June 30, 1957, was $24.9 billion, an increase of 8.6 percent over the $22.9 billion reported 1 year earlier. Nearly 70 percent of the $2.0 billion increase was in properties of the Air Force. The distribution by military department is illustrated in chart 3. The $24.9 billion total included $19.5 billion in continental United States, $2.6 billion in our Territories and possessions, and $2.7 billion in foreign countries friendly to the United States.

"Controlled," as used throughout this report, has reference to the right of directing the use of property. In connection with buildings, structures, or land, it includes (1) owned (acquired through purchase, condemnation, donation, transfer); (2) leased; (3) public domain (withdrawn permanently or temporarily by military departments); (4) temporary use (acquired through license or permit, temporary public land order, temporary Executive or territorial order); (5) easements (utility, clearance, etc.); (6) foreign rights (base rights agreements, reciprocal aid, requisitioned, etc.).

This $24.9 billion does not indicate present market value. Some of the land now owned by the military departments was donated, such as Governors Island, donated by the State of New York to the Army.

Some of it is a withdrawal from the public domain. There is no cost for public domain lands and in many instances no costs, or only nominal costs, for donated lands. Land and buildings in some cases were acquired a century or more ago when land prices and building costs were only a fraction of today's prices and costs. Cost data, in some instances, include estimates from old records, and are not always precisely accurate representations of original cost.

TABLE 3.—*Cost of military real property controlled, Department of Defense, as of June 30, 1957* [1]

[Thousands of dollars]

Area	Department of Defense	Army	Navy (including Marine Corps)	Air Force
Total	$24,891,957	$8,277,346	$8,213,397	$8,401,214
Continental United States [2]	19,534,852	7,189,540	6,733,007	5,612,305
Territories and possessions [3]	2,642,861	563,231	1,174,653	904,977
Foreign countries	2,714,244	524,575	305,737	1,883,932

[1] Does not include amount of rentals paid (see table 10) nor the value of property under lease; does include costs of improvements on leased properties.
[2] Excludes real property in the amount of $3,667,000,000 under the jurisdiction of the Civil Works Division, Office, Chief of Engineers, Department of the Army.
[3] Excludes real property in the amount of $8,000,000 under the jurisdiction of the Civil Works Division, Office, Chief of Engineers, Department of the Army.

Offsetting this tendency to understate real property values is the fact that no allowance for loss of value as a result of depreciation is reflected. However, because the data represent an inventory as of a given date, they do not include costs of structures which were demolished prior to that date. As additional construction or acquisition is accomplished, it is written into the inventory at the cost to the Government. The original cost figure is of significance as an historical measure of the military real property holdings of the Department of Defense, and, in the absence of current appraised valuations (which would be costly and of doubtful utility), is the only monetary measure of the Federal proprietary interest.

The cost to the Government data do not include amount of rentals paid nor the value of the property under lease. These data do include, however, costs of any improvements made and owned by the Government on the leased properties.

At the request of the House Committee on Government Operations, an estimate has been made of the current value of the public-domain land controlled by the Department of Defense. These estimates are shown in tables 4 and 5. Table 4 shows total estimates for military and civil functions separately, and table 5 distributes the estimates for military functions by military department. These estimates are not included in the $146.0 billion book value total of the real and personal property for military use or the $4.2 billion total for civil functions.

[1] Less than $500.

(*b*) *Real property in foreign countries.*—The $2.7 billion investment in real property in friendly foreign countries represents the cost of that real property to the United States. It consists of troop and family housing, storage facilities, airfields, maintenance facilities, hospitals, and various other kinds of real property required by our Armed Forces overseas.

International agreements which make it possible to station our Armed Forces in friendly countries provide the basis for their occupancy of real property in those countries and United States investment in such real property. In recent years, negotiation of such agreements has provided some recognition of the residual value of United States facilities constructed with appropriated funds. Occupancy, in effect, is on a term basis varying from month-to-month (revocable at the sole discretion of the host government) to a firm term of 99 years. Areas occupied vary from simple privately owned leased space to large holdings of host governments.

In occupied territories, occupancies have been effected through the use of requisitions. These programs are financed by the governments of the occupied countries with their own currency, such as the deutschemark financed properties improved or constructed in West Germany. (Notwithstanding the recently acquired sovereignty of West Germany, these arrangements are still in effect as an interim agreement.) This report includes only the cost, if any, to the United States of properties in occupied territories.

During the past 3 years, a number of properties in Japan, Korea and West Germany have been released by the Department of Defense to the governments of these countries. The evacuation of Austria by our occupying forces resulted in releasing to the Austrian Government the properties these forces had required.

In certain countries, title to improvements constructed by the Department of Defense is vested in the United States until termination of agreements by which occupancy was established. Upon expiration of such an agreement, disposition of the property is accomplished in accordance with the terms of the agreement. (Title may pass automatically to the host country or the property may be removed or sold by the United States or its ultimate disposition may be left open for further negotiations.) In other instances, residual value clauses provide that, upon termination of agreements, the host government agrees to pay the residual value of the improvements constructed by the Department of Defense in such amounts as may be jointly agreed upon by the host government and the United States.

These facts emphasize the desirability of awareness that our real property in foreign countries is carried on the books of the Department of Defense and in this report at its cost to the United States. The physical facility represented by an investment in a foreign country may be identical with a facility within the United States owned by our Government but it represents a very different type of an investment. It is an investment arising from the world situation at the time it was made and the resulting national commitments of the United States.

The report does not include any investment by the United States for Infrastructure (the NATO common infrastructure program), which is a term used to identify the fixed military facilities needed to support

effective combat operations by the integrated NATO forces. Construction costs for Infrastructure facilities are shared by all NATO nations. Actual construction is the responsibility of the nation in whose territory a project is located.

(*c*) *Ownership and status.*—The figures in table 3 show that on a cost basis more than three-fourths (78.5 percent) of the military real property controlled is located within the continental United States. Of the remainder 10.6 percent is in Territories and possessions and 10.9 percent in foreign countries. The increase during the year ending June 1957 from 9.6 to 10.9 percent which properties in foreign countries make up of the worldwide total is partly accounted for by improved coverage in the Air Force oversea total.

Each of the military departments now control about equal amounts, on a dollar basis, of the military real property of the Department of Defense. As of 1 year ago, the properties were indicated as 35 percent for Army, 34 percent for Navy, and 31 percent for the Air Force. Part of the seeming equalization is due to better coverage.

Within the continental United States, Army controls, on a cost basis, nearly 37 percent of the Department of Defense total, while Navy's holdings in the Territories and possessions represent 44 percent of the Department's total, and in foreign countries, Air Force controls 69 percent of the Defense total.

It should be pointed out that from the standpoint of construction, Air Force installations are generally newer than those of either of the Army or Navy and thus their costs are generally fairer representations, of current value. Some of the facilities transferred to the Air Force, however, would also fall into the category of rather old structures for which original costs are not truly representative of current values.

The cost of properties in nonindustrial installations (training centers, depots, hospitals, command headquarters, ports, housing, etc.) constitute more than three-fourths (76.4 percent) of the cost of all properties on a worldwide basis. Reference to table 6 shows that properties located at installations in an inactive or standby status on a worldwide basis cost $1.5 billion, 6.1 percent of all properties. This proportion was the same 1 year ago.

(*d*) *Types of properties.*—Table 7 shows the military real property costs for the entire Department of Defense by broad geographical locations and by major facility groupings. Approximately one-fourth of the overall total consists of utilities and ground improvements (mainly roads and walks).

Table 8 shows the 10 categories of real property, grouped in order of cost, in which the Department of Defense has the largest dollar investment. These data are presented graphically in chart 4. These 10 categories on a worldwide basis represent a total cost of $15.9 billion or almost two-thirds (63.9 percent) of the cost of all Defense-controlled real property. Comparable data are presented for each of the military departments in tables 19 (Army), 23 (Navy), and 27 (Air Force). Troop housing continues to be the largest single category followed by airfield pavements and maintenance facilities.

The cost of land controlled by the Department of Defense represents only 3 percent of the total cost of all real property controlled by the Department of Defense.

TABLE 6.—*Cost of military real property controlled by status of installation, worldwide, Department of Defense, as of June 30, 1957*

[Thousands of dollars]

Area	All installations	Active installations	Inactive installations [1]
Total	24, 891, 957	23, 371, 196	1, 520, 761

Utilities and ground improvements	6, 137, 884	4, 883, 730	672, 001	582, 153
Real estate, land	739, 421	677, 561	56, 063	5, 797

TABLE 8.—*Cost and area of 10 largest categories of real property worldwide, Department of Defense, as of June 30, 1957*

Category	Area (in thousands of square feet)	Cost to U. S. Government (thousands)
Troop housing (excluding emergency)	535, 611	$2, 550, 460
Airfield pavements	[1] 446, 021	2, 246, 216
Maintenance facilities	292, 021	2, 030, 621
Storage, covered, depot and installation [2]	609, 656	1, 924, 946
Production facilities	179, 000	1, 753, 851
Utilities:		
Roads and streets	[1] 732, 600	1, 541, 806
Electric [3]	6, 026	1, 065, 457
Water [3]	5, 967	984, 105
Heat, steam, gas [3]	13, 570	826, 682
Family housing [4]	284, 538	982, 517

[1] Square yards.
[2] Excludes liquid fuel, ammunition, and cold storage.
[3] Includes both operating plants and distribution lines.
[4] Dwellings only.

TABLE 9.—*Cost of buildings worldwide Department of Defense as of June 30, 1957*

[Thousands of dollars]

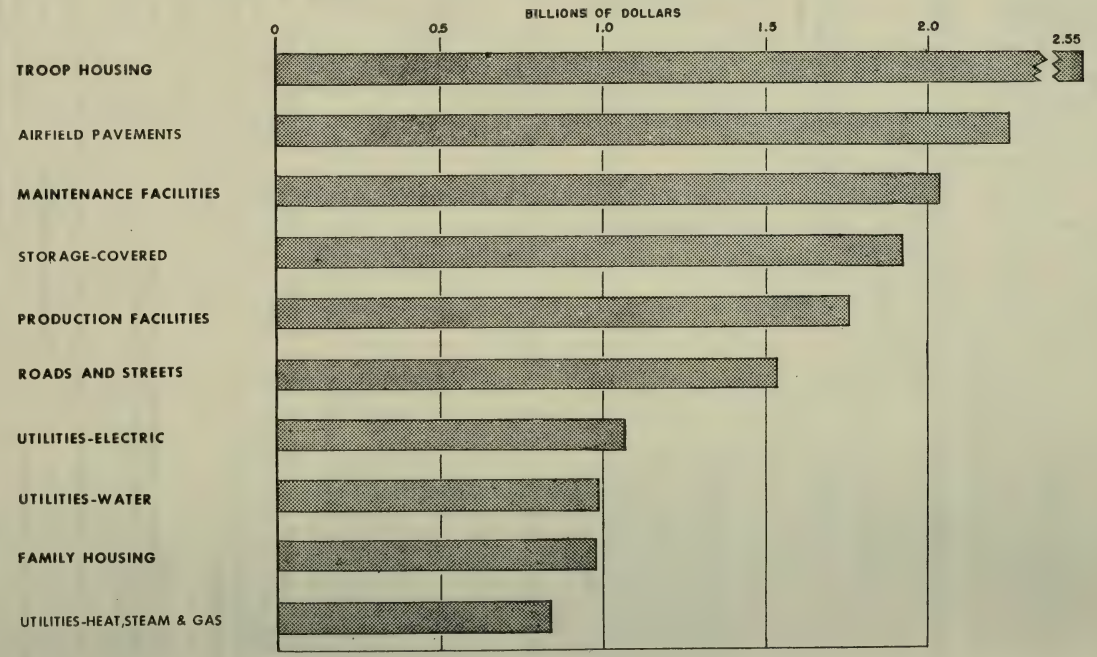

Department	Worldwide	Percent of all property cost	Continental United States	Territories and possessions	Foreign countries
Total, Department of Defense	$13, 791, 393	55. 4	$11, 030, 820	$1, 348, 414	$1, 412, 159
Army	5, 249, 241	63. 4	4, 581, 532	342, 943	324, 766
Navy	4, 081, 909	49. 7	3, 440, 491	496, 559	144, 859
Air Force	4, 460, 243	53. 1	3, 008, 797	508, 912	942, 534

NOTE.—Where applicable, these building cost data are included in all tables showing costs in this section.

CHART 4

COST OF THE TEN LARGEST CATEGORIES OF DOD REAL PROPERTY WORLD-WIDE

AS OF 30 JUNE 1957

Cost of buildings, on the other hand, represent 55 percent of the total costs of military real property controlled. Table 9 shows these building costs by broad geographical areas and by military department. In the continental United States total costs of buildings for the Army are highest, whereas within the Territories and possessions and in foreign countries those for the Air Force are highest.

(*e*) *Lease rentals.*—The rental data in table 11 indicate that rentals received, on a worldwide basis, represent 56 percent of the amount paid in rentals shown in table 10. This situation arises from the substantial rentals paid for property in foreign countries. Within the continental United States rentals received are about 82 percent of the rentals paid for property used by the Department of Defense. During the year ending June 1957 worldwide rentals paid increased from $23 million to $31 million. Rentals received from properties leased to others also increased, from $13.8 million to $17.4 million. That portion of rental income derived from agricultural leases is returned to the States for public-school use.

(*f*) *Acreage controlled.*—The Department of Defense through the 3 military departments controlled a total of 35.0 million acres of land throughout the world on June 30, 1957, an increase of 4 percent, 1.4 million acres, over that reported 1 year earlier. Of the increase, 1,076,000 acres were reported by the Air Force and 309,000 acres for the Army. The distribution of worldwide acreage controlled by the Department of Defense is illustrated in chart 5 and in table 12.

Total holdings include land owned, acquired from the public domain, used on temporary permit, leased, and other occupancy rights (easements and foreign rights of different types). Table 13 shows the land tenure, that is, the type of occupancy, on a geographic basis.

TABLE 10.—*Annual rental paid for military real property leased by Department of Defense from outside sources, as of June 30, 1957*

[Thousands of dollars]

Area	Total	Army	Navy (including Marine Corps)	Air Force
Total	$31,024	$18,783	$4,592	$7,649
Continental United States	20,180	12,428	3,844	3,908
Territories and possessions	320	287	21	12
Foreign countries	10,524	6,068	727	3,729

TABLE 11.—*Annual rental received for military real property leased by Department of Defense to outside sources, as of June 30, 1957*

[Thousands of dollars]

Area	Total	Army	Navy (including Marine Corps)	Air Force
Total	$17,378	$5,992	$9,709	$1,677
Continental United States	16,561	5,874	9,013	1,674
Territories and possessions	616	41	572	3
Foreign countries	201	77	124	0

TABLE 12.—*Acreage of military real property controlled, by geographic location and military department, as of June 30, 1957*

Area	Department of Defense	Army	Navy (including Marine Corps)	Air Force
Total	34, 989, 870	10, 915, 628	4, 919, 630	19, 154, 612
Continental United States [1]	27, 350, 954	9, 081, 192	4, 354, 496	13, 915, 266
Territories and possessions [2]	4, 966, 741	1, 100, 807	234, 954	3, 630, 980
Foreign countries	2, 672, 175	733, 629	330, 180	1, 608, 366

[1] Excludes 3,860,517 acres under the jurisdiction of the Civil Works Division, Office, Chief of Engineers' Department of the Army.
[2] Excludes 539 acres under the jurisdiction of the Civil Works Division, Office, Chief of Engineers, Department of the Army.

TABLE 13.—*Acreage of military real property controlled, by type of tenure and geographic location, as of June 30, 1957*

Type of tenure	Total	Continental United States	Territories and possessions	Foreign countries
Total	34, 989, 870	27, 350, 954	4, 966, 741	2, 672, 175
Owned	7, 827, 841	7, 669, 150	158, 691	0
Public domain	18, 579, 956	15, 067, 168	3, 512, 788	0
Temporary use	3, 865, 425	2, 824, 670	1, 040, 634	121
Leased	1, 964, 854	1, 722, 558	151, 196	91, 100
Easements	85, 198	67, 408	1, 497	16, 293
Public lands	68, 954	0	67, 547	1, 407
Foreign rights	2, 597, 642	0	34, 388	2, 563, 254

Of the acreage controlled by the Department of Defense, 78 percent is within the continental United States. Slightly more than 14 percent is located within the Territories and possessions and not quite 8 percent in foreign countries. This is approximately the same distribution as that on June 30, 1956. The Air Force need for space to accommodate air training, maneuver, test, and bombing ranges is illustrated by the fact that it controls nearly 55 percent of the Department of Defense total acreage.

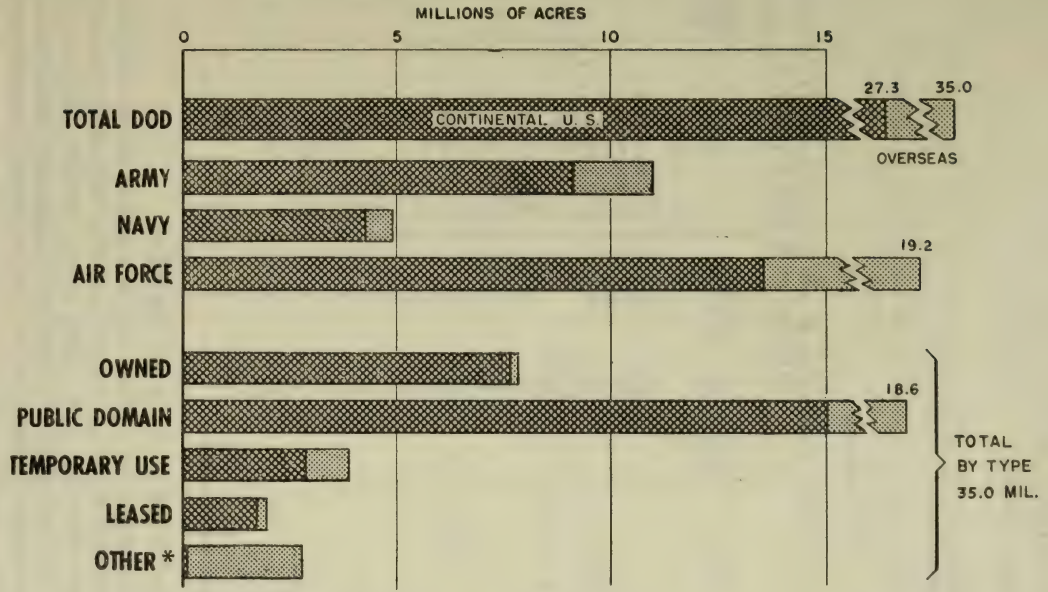

Acreage controlled by the military departments in the continental United States represents 1.4 percent of the total land area in the country. The 27,350,954 acres owned or leased or under permit represent about 42,735 square miles. The relationship of the land controlled by the Department of Defense to the total acreage in the continental United States is shown in table 14.

In each of 6 States the Department of Defense controls more than 1 million acres. The six are, in order of magnitude of acreage controlled, California, Nevada, New Mexico, Arizona, Utah, and Idaho. Total acreage in these 6 under Department of Defense control is 19.9 million and represents 72.9 percent of the continental United States total under Department of Defense control. Table 15 lists all of the States and the District of Columbia, showing for each the total cost and acreage controlled by the Department of Defense. The six States in which the Department has the largest real property investment in order of magnitude of investment are California, Texas, Virginia, New York, Maryland, and Pennsylvania. Total costs of the military real property controlled in these 6 States represents almost two-fifths (39.4 percent) of the continental United States total.

[1] Land and improvements.

3. *Department of the Army inventory*

Real properties owned and controlled on a worldwide basis by the Department of the Army at June 30, 1957, cost $8.3 billion, a 4-percent increase over the $7.9 billion 1 year earlier. Of the Army worldwide total, 86.9 percent was located within the continental United States, 6.8 percent in United States Territories and possessions and 6.3 percent in foreign countries.

Annual rentals paid by Army for property it was leasing at June 30, 1957, were up from $13.9 million 1 year earlier to $18.8 million. About 31 percent of the rental cost is offset by the $6 million Army receives in rentals for its property leased to other users. The increase in rentals during the year ending June 1957 is due primarily to housing requirements at antiaircraft defense sites in continental United States. The Army rental bill for properties in foreign countries decreased 17 percent, from $7.3 million to $6.1 million. Since June 1955 the army rental bill in foreign countries has been reduced more

than one-half, mainly due to the practice of releasing properties wherever practicable.

Total worldwide acreage under Army control at June 30, 1957, was 10.9 million acres; 83.2 percent within the continental United States, 10.1 percent in the Territories and possessions, and 6.7 percent in foreign countries. The 2.9 percent overall increase during the year ending June 1957 resulted from an increase of 317,000 acres in continental United States and 5,000 in foreign countries. A slight decrease occurred in Territories and possessions.

Military real property under Army control within the continental United States as of June 30, 1957, had a total cost of $7.2 billion, a 5-percent increase over the $6.9 billion for a year earlier. The proportion of Army installations in active status, on a dollar basis, at the close of the year was unchanged at about 88 percent from the earlier figures from the 2 preceding years. Table 16 presents cost and rental data reported by Army for the military real property under its control within the continental United States on June 30, 1957.

TABLE 16.—*Cost and rentals of military real property controlled, continental United States, Department of the Army, as of June 30, 1957*

[Thousands of dollars]

A. COST TO U. S. GOVERNMENT [1]

Type of installation	Total	Active		Inactive [2]	
		Cost	Percent	Cost	Percent
Total	$7,189,540	$6,333,335	88.1	$856,205	11.9
Nonindustrial	4,904,803	4,441,724	90.6	463,079	9.4
Industrial	2,284,737	1,891,611	82.8	393,126	17.2
Government operated		635,261			
Contractor operated		1,256,350			

B. ANNUAL RENTAL PAID FOR LEASED PROPERTY

Type of installation	Total rental	Active		Inactive [2]	
		Amount of rental	Percent	Amount of rental	Percent
Total	$12,428	$12,407	99.8	$21	0.2

Contractor operated		2,837			

[1] Land and improvements.
[2] Includes excess and standby.

The ratio on a basis of cost to the Government, of Army's nonindustrial installations to total installations continued at 68 percent. The dollar total of the industrial type installations was $2.3 billion on June 30, 1957. The Government operated 34 percent, on a cost basis, of the industrial-type active installations. This was the same proportion as for 1 year earlier.

Annual rentals paid by Army for property it leases in continental United States amounting to $12.4 million were offset considerably by rentals received in the amount of $5.9 million. Slightly over 82 percent of the rentals received are from industrial properties.

The total acreage controlled by Army within the continental United States is reported in table 17 by status, type of land tenure, and type of installation. In the year ending June 30, 1957, the Army-owned acreage within continental United States increased about 177,000 acres. Part of this, as well as some land on temporary use and lease basis, was for additional test areas at antiaircraft ranges. The amount withdrawn from public domain was reduced slightly.

The acreage and cost to the Government of the military real property controlled by Army in each of the States and the District of Columbia is shown in table 18. Six States, ranked by dollar size of the largest cost, were Virginia, Texas, California, Indiana, New York, and Maryland. The cost of the properties in these States constitutes one-third of Army's total continental United States cost. The total acreage (almost 6 million) controlled by Army in the 6 States having over one-half million acres; that is, New Mexico, California, Arizona, Texas, Utah, and Georgia, constitute 66 percent of its continental United States acreage. Virtually all (95 percent) of the public domain land under Army control is located in the 4 States of New Mexico, Arizona, California, and Utah.

Family housing	51,769 square feet	Family	39,035	17,091	259,926

[1] Excludes liquid fuel, ammunition, and cold storage.
[2] Includes operating plants and distribution lines.

The 10 categories of real property in which Army has the greatest dollar investment in continental United States are presented in table 19. They are shown graphically in chart 6 along with Navy and Air Force data. The total cost represented by these categories is $4.8 billion, 67 percent of the total Army continental United States cost.

The production facilities, as a functional group, represent the largest category, on a cost basis, of properties held by the Army in this country. This category consists of the specific plants, shops, and manufacturing enterprises which are in operation at nonindustrial installations as well as those at industrial installations. Family housing replaced railroads as the 10 largest category during the year ending June 1957.

Department of the Army real properties outside the continental United States represented, on June 30, 1957, a cost of $1,088 million as compared with $1,050 million 1 year earlier. Slightly more than half (51.7 percent) of the cost of overseas properties is in United States Territories and possessions.

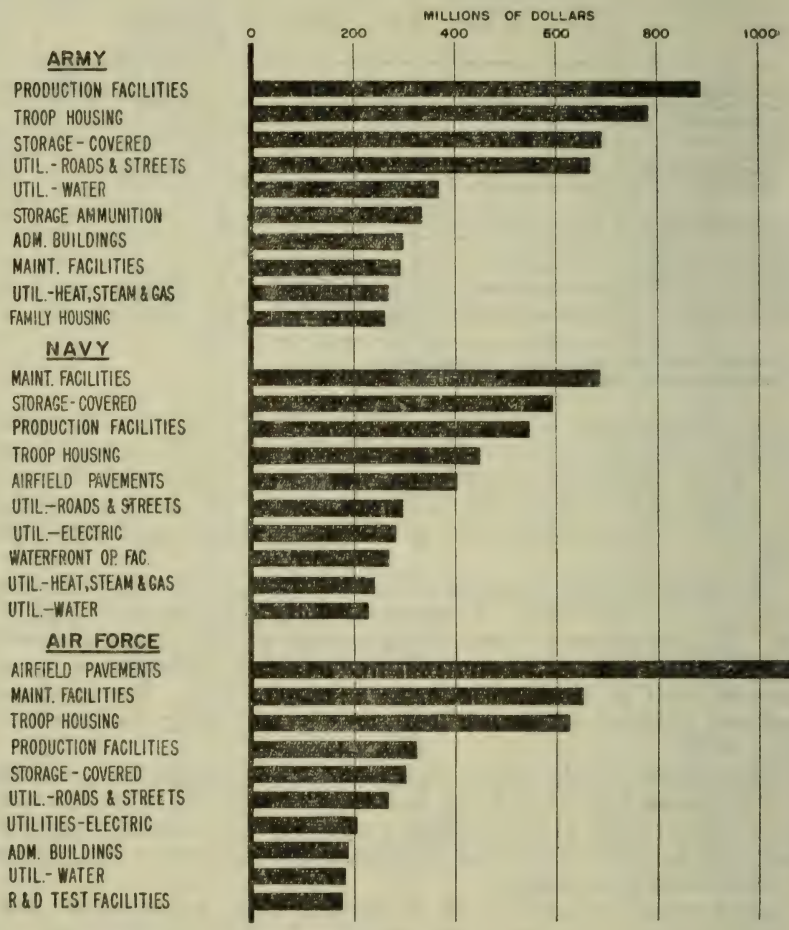

Army retains a large block of Alaskan land under public domain withdrawal and temporary use permit. It also exercises base rights on 734,000 acres in foreign countries.

Troop housing continued to comprise the Army's largest cost category in both the Territories, possessions, and foreign countries. On a cost basis, 96 percent of the properties in Territories and possessions are located in active installations and virtually all of the properties (99.8 percent) in foreign countries are in active installations.

COST OF 10 LARGEST CATEGORIES OF REAL PROPERTY
CONTINENTAL U.S.

AS OF 30 JUNE 1957

* See Tables 19, 23 and 27

4. Department of the Navy inventory

Real property controlled and used by the Navy on a worldwide basis cost $8.2 billion, an increase of 4 percent over the $7.9 billion reported 1 year earlier. About 62 percent of the increase of $326 million was in continental United States.

The Navy is the only one of the military departments whose worldwide rentals received exceed rentals paid. Annual rentals received amounted to $9.7 million as compared to rental payments of $4.6 million. Navy's acreage controlled, on a worldwide basis, was 4.9 million acres; less than half the amount under Army control and roughly one-fourth the acreage under Air Force control. During the year the net change in Navy acreage, worldwide, was only an increase of 6,000 acres.

On a cost basis, 82 percent of Navy-controlled property is located within the continental United States. Table 20 presents data showing costs and rentals for Navy-controlled installations in the United States by nonindustrial and industrial types.

Navy properties within the continental United States at June 30, 1957, on a cost basis, were up $203 million over those reported for June 30, 1956. This represents only a 3-percent increase as compared with a 4-percent increase during the year ending June 30, 1956. Properties at inactive installations, on a cost basis, comprised 4.5 percent, as compared with 4.3 percent a year ago, of the total Navy real properties in continental United States. On a cost basis, the Navy industrial facilities comprised 42 percent of the total Navy United States real properties.

Receipts of $9.0 million annually from all properties leased within the United States are more than double rentals paid of $3.8 million. More than three-fourths of the rentals received in continental United States comes from industrial properties. Rentals received from industrial properties now total $7.1 million annually as compared with $4.2 million 1 year ago.

TABLE 20.—*Cost and rentals of military real property controlled, continental United States, Department of the Navy, as of June 30, 1957*

[Thousands of dollars]

[2] Includes excess and standby.

Navy owned about 36 percent of the acreage it had under its control within the continental United States on June 30, 1957. This was an increase of 2,400 acres during the year. There was little net change in the total acreage under Navy control in the continental United States; an increase of only 771 acres from the total reported a year earlier. The data in table 21 provide certain detail relative to Navy acreage by type of land tenure and type of installation. A reduction in leased acreage of about 120,000 was nearly offset by a like increase in public domain withdrawals. Of total acreage controlled by the Navy in continental United States, 94 percent is located at installations which are in an active status.

In table 22 data are presented showing State detail as to total cost and acreage of the military real property controlled by Navy. On the basis of cost, 55 percent of Navy's total real property investment in the continental United States is in the 6 States of California, Virginia, Pennsylvania, New York, Maryland, and Florida. The States are ranked in order of amount invested. The heavy concentration of naval activities in the State of California is well illustrated by the fact that 23.4 percent of the United States total cost is represented by California installations; these had an acquisition cost of $1,584 million. In terms of acreage 65 percent of the Navy total represents California land. Of the Navy United States land total, 84 percent of its public domain, 89 percent of its temporary use, 86 percent of its leased land and 31 percent of its owned land, is located in California.

[1] Land and improvements.

The 10 largest categories, representing the greatest cost to Navy, are shown in table 23 (previously illustrated in chart 6). In total, they constitute 59 percent of the overall Navy real property cost in the continental United States, the same relative proportion as that of 1 year ago. The broad diversification of Navy activities in the country is illustrated by the table 23 data. While shipbuilding is one of the Navy's leading peacetime activities and accounts for a large part of Navy's industrial activity, there are numerous other activities of importance within the industrial field; namely, ordnance plants, various test stations (underwater laboratories, torpedo, radar, electronics, ballistics, etc.), powder factories, ammunition depots, and other munitions-type production. Within continental United States, the largest Navy amount is invested in the maintenance facility category.

Eighteen percent ($1.5 billion) of the Navy real property total is located outside of continental United States. Of this total, $1,175 million was in Territories and possessions and $306 million was in foreign countries as of June 30, 1957. The Navy controlled 235,000 acres in Territories and possessions and 330,000 in foreign countries on June 30, 1957. The 10 largest categories of Navy real property in Territories and possessions represent a cost to the United States Government of $777 million, and in foreign countries, $206 million.

5. Department of the Air Force inventory

Worldwide real property under Air Force control on June 30, 1957, cost the Government $8.4 billion, representing 33.8 percent of the Department of Defense total. The 12-percent increase over that of 1 year earlier was partly attributable to improved coverage of the June 30, 1957, inventory.

TABLE 23.—*Cost of 10 largest categories of military real property, continental United States, Department of the Navy, as of June 30, 1957*

Category	Area (thousands)	Other measure		Number of buildings	Cost to U. S. Government (thousands)
		Unit	Quantity		
Maintenance facilities	67,435 square feet		0	4,572	$686,025
Storage, covered [1]	153,280 square feet		0	10,624	594,105
Production facilities	69,065 square feet		0	2,196	541,535
Troop housing (excluding emergency)	73,299 square feet	Man	622,764	6,407	448,286
Airfield pavements	107,887 square yards		0	0	403,313
Utilities:					
Roads and streets	123,550 square yards	Mile	9,804	0	295,592
Electric [2]	1,094 square feet	Kilovolt Thousand feet	472,120 49,417	1,186	281,858
Waterfront operational facilities [3]	3,560 square yards	FB	782,068	1	268,050
Utilities:					
Heat, steam and gas [2]	3,022 square feet	Horsepower Thousand feet	1,146,889 11,596	868	238,084
Water [2]	678 square feet	Million gallons per day. Thousand feet	633 26,429	1,214	228,015

[1] Excludes liquid fuel, ammunition, and cold storage.
[2] Includes operating plants and distribution lines.
[3] Piers and wharves; excludes seawalls, bulkheads, and other waterfront facilities.

Air Force annual rentals paid for property worldwide amounted to $7.6 million as of June 30, 1957. These were partly offset by receipts from properties leased to others in the amount of $1.7 million.

Land controlled by the Air Force all over the world totaled 19.1 million acres on June 30, 1957, an increase of 6 percent over the 18.1 million acres reported a year earlier. A decrease of about 49,000 acres in continental United States was more than offset by an increase of over 1 million acres in Territories and possessions.

The data in table 24 shows that Air Force-controlled military real property within the continental United States represents a cost to the Government of $5.6 billion. This represents 67 percent of the total worldwide Air Force investment. Only 3.4 percent of the United States total is at inactive installations. Industrial activities under Air Force control, all of which are contractor operated, constituted only 11 percent of the continental United States total Air Force property value.

Air Force-controlled acreage within the continental United States was 13.9 million acres on June 30, 1957, a decrease of slightly under 49,000 acres during the year. A reduction of 120,000 acres under lease was partly offset by an increase of 74,000 acres in owned land. Land in inactive installations constituted only 1.3 percent of all Air Force-controlled lands in continental United States. Of the 15.1 million acres withdrawn from public domain for defense use within continental United States, the Air Force controlled 63 percent. Much of this is land used for gunnery and advanced fighter-bomber training. Table 25 provides additional detail.

TABLE 24.—*Cost and rentals of military real property controlled, continental United States, Department of the Air Force, as of June 30, 1957*

[Thousands of dollars]

[2] Includes excess and standby.

The State pattern of military real property controlled by the Air Force is shown in table 26. Some degree of concentration is suggested by the fact that the cost of the properties controlled in the 4 States of California, Texas, Florida, and Ohio constitute 34 percent of the Air Force's United States total. The Air Force has more than $300 million invested in each of these States. The physical quantity of land controlled in 5 States, each with over 1 million acres, Nevada, Arizona, New Mexico, Utah, and California, comprise 75 percent of the total Air Force controlled acreage in this country. Nearly 80 percent of the Air Force-controlled acreage in these 5 States is land from the public domain.

On the basis of cost, table 27 presents the 10 largest categories of Air Force-controlled real property. These are compared graphically in chart 6. The total of these major categories represents 71 percent

of the Air Force total cost within this country, the same proportion as 1 year ago. Airfield pavements account for 19 percent of the total Air Force investment within continental United States. This category increased in this country by $139 million during the fiscal year. Maintenance facilities is the second largest category followed closely by troop housing.

Air Force-controlled properties outside the continental United States, on the basis of cost, amounted to $2.8 billion at June 30, 1957, as compared with $2.2 billion at previous fiscal year end. The overseas amount is 33 percent of the worldwide Air Force real property cost. The majority of Air Force properties outside this country are located in foreign countries; 69 percent of the Department of Defense investment in real property in foreign countries is under Air Force control.

TABLE 26.—*State distribution of military real property controlled, Department of the Air Force, as of June 30, 1957*

State	Cost to U. S. Government [1] (thousands)	Land area (acres)					
		Total controlled	Owned	Public domain	Temporary use	Leased	Easements

		Thousand feet	53,640		
Administrative facilities	39,011 square feet			6,530	184,547
Utilities: Water [2]	761 square feet	Million gallons per day.	3,898	1,256	183,062
		Thousand feet	39,219		
Research and development and test buildings.	12,176 square feet			709	179,265

[1] Excludes liquid fuel, ammunition, and cold storage.
[2] Includes operating plants and distribution lines.

Air Force-controlled properties in many foreign countries represent leases of relatively small acreages. Foreign base rights in 33 different countries involve 1.6 million acres of land. Virtually all, 98 percent, of the Territories and possessions acreage controlled by Air Force is in Alaska and 92 percent of this has been withdrawn from public-domain lands. Airfield pavements constitute the single largest Air Force investment outside continental United States. Troop housing is next in cost.

SECTION B. CONSTRUCTION IN PROGRESS

The cost of work in place, as reported by the military departments, on construction projects which have been started but not completed is being included in this report for the first time. The cost reported represents the cost of labor and materials incorporated on the construction projects. The Federal Government has a property interest in these projects, most of them being built on Government-owned land.

Against this property interest the military departments have made cash payments in the form of progress payments to the contractors, and the unpaid balance due for the work completed by the contractor is carried as accounts payable.

Upon satisfactory completion of the project and acceptance by the military department, the total cost of the completed project is added to the real property inventory account.

The following table shows the accrued cost of projects underway in the various geographical areas for each of the military departments.

TABLE 28.—*Cost of work in place on construction in progress, Department of Defense, as of June 30, 1957*

[Thousands of dollars]

Area	Department of Defense	Army	Navy (including Marine Corps)	Air Force
Total	$3,789,830	$942,273	$1,033,541	$1,814,016
Continental United States	2,422,135	[1] 671,318	723,478	1,027,339
Territories and possessions	401,247	92,598	220,063	88,586
Foreign countries	966,448	178,357	90,000	698,091

[1] Excludes $300,000,000 for cost of work in place on civil-works projects.

PART II. MILITARY PERSONAL PROPERTY

SECTION A. INVENTORY OF MILITARY EQUIPMENT AND SUPPLIES IN THE CONSOLIDATED SUPPLY SYSTEMS AND IN STOCK FUNDS

1. General

This section of the report deals with the inventories in the supply systems of the military services. For each of the four military services, dollar data are presented in terms of the major purposes for which the supplies and equipment are held, e. g., peacetime operating stock, mobilization reserve stock, economic retention stock, contingency retention stock, excess stock. The inventories are also subclassified into broad commodity categories.

Inventories are accounted for in the supply systems of the military services from the time of acceptance by the service at the military depot until they have been issued to a using unit. The supply system inventories are those being held in the storage or warehousing facilities of the Department for issue to the consumer. They constitute that segment of the overall materiel supply system which is defined in the Joint Chief's of Staff dictionary as the "phase of military supply which extends from receipt of finished supplies by the military services through issue for use or consumption."

The stocks are physically located at depots, posts, camps, stations, and bases in the United States, Territories and possessions, and in foreign countries. They are stored in warehouses, open storage spaces, ammunition dumps, and fuel tanks.

Supply items which have been issued to the consuming military units—such as divisions, air-wings and most ships—are not considered as assets of the supply system. These items are in the hands of the ultimate user and as such are carried in the individual unit inventories where they remain until consumed, destroyed, captured, lost, or otherwise disposed of. Data are presented in part II, section B, of this report on inventories which have been issued from the supply system to the ultimate users. If such an item in a military unit becomes unserviceable, it is normally replaced by a serviceable item from the supply system. The unserviceable item is returned to the supply system where it may be repaired and put back into supply channels or declared excess and disposed of.

Stock funds.—Stock funds do not constitute a separate supply system. They are operational and financial devices employed by the

military services principally to facilitate financial control over consumption-type supply items for which there is recurring demand. The stock fund mechanism permits the military services to handle inventories of such continuous-demand items on a replacement basis much as private distributors replace stocks depleted by sales with new stocks purchased with the proceeds from such sales. Because of the widespread interest in stock fund operations as a means of improving supply and fiscal management and control of inventories, data representing stock fund inventories for each service are shown separately in this section. These stock fund inventories are included in the overall totals for the entire supply system of each military service.

Reporting of categories and inventory accounts.—Data representing the dollar value of inventories in the aggregate supply system, both the items which are financed by stock funds and those financed from appropriated funds, are shown for each of the military services in the tables in this section.

Each of these tables show the dollar amount of inventories in each major commodity category (groupings of similar kinds of supplies and equipment) and in each strata (groupings according to the purpose for which the supplies are retained).

The stratification accounts now in use by the Army and the Navy are consistent. The Air Force and the Marine Corps have not completed stratifying their inventories. Since complete uniformity has not been achieved, a single set of definitions cannot be presented. The terminology and definitions currently employed by each military service are presented separately for each service.

2. Department of Defense summary

This section of the report presents detailed dollar inventory summaries, showing categories and stratification accounts for each of the military services. A summary of the aggregate totals in the Department of Defense supply system is shown in table 29.

Table 29 shows that Army holds the largest part of the Department of Defense supply system inventories—40.7 percent. Navy and Marine Corps together account for 32.0 percent, and Air Force for 27.3 percent. Of the stock fund inventories—Army has 69.9 percent; Navy and Marine Corps have 24.2 percent; and Air Force has 5.9 percent. Of the appropriated funds inventories—33.2 percent belong to the Army; 34.0 percent, Navy and Marine Corps; and 32.8 percent Air Force. These data are also presented graphically in chart 7.

TABLE 29.—*Supply system inventories, Department of Defense, as of June 30, 1957*

[Millions of dollars]

	Total	Stock fund inventories	Appropriated fund inventories
Department of Defense, total	$53,799	$10,970	$42,829
Army	21,899	7,676	14,223
Navy	[1] 15,539	2,334	[1] 13,205
Marine Corps	1,682	323	1,359
Air Force	14,679	637	14,042

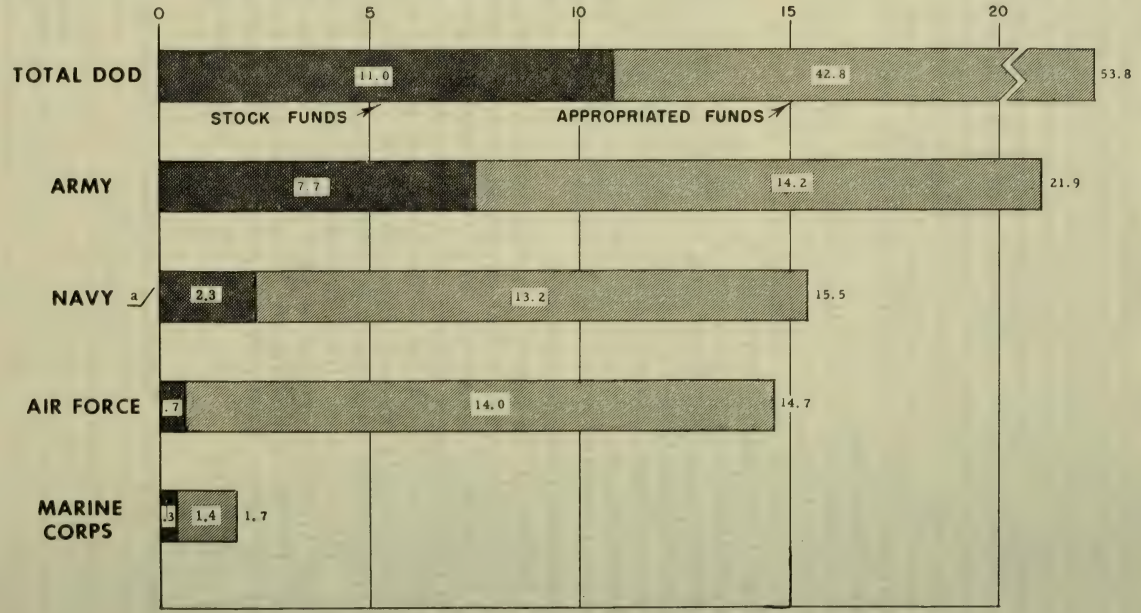

[1] Includes $205,000,000 shipboard supplies and $848,000,000 aircraft spare engines not included in Navy supply system inventory data.

CHART 7

DOD SUPPLY SYSTEM INVENTORIES BY SERVICE

AS OF 30 JUNE 1957

BILLIONS OF DOLLARS

a/ Includes $205 million Shipboard Supplies and $948 million Aircraft Spare Engines not included in chart of Navy Supply System Inventories

3. Army supply system inventories

As one of the techniques in improving inventory control, Army has reclassified commodity categories to more clearly reflect the groupings of the supply items under the several technical services.

The six stratification accounts reported by the Army are: (1) Peacetime operating, (2) mobilization reserve, (3) economic retention, (4) contingency retention, (5) disposable excess, and (6) claimant. In addition, Army reports stocks in transit and stocks in hands of contractors. These six Army inventory accounts are defined as follows:

(1) Peacetime operating stocks are stocks in depots and posts, camps, and stations held for issue to using units to equip and train the planned peacetime United States forces.

(2) Mobilization reserve stocks are stocks held for the account of that portion of the mobilization reserve materiel requirement for which procurement is authorized. They include the prepositioned stocks held in specific locations in condition for immediate shipment or use.

(3) Economic retention stocks are stocks in long supply which are to be retained to meet future requirements since it is more economical to retain them than it is to dispose and later have to purchase them.

(4) Contingency retention stocks are stocks in long supply for which there is no programed requirement but which should be retained for military or defense contingencies. Only military type items—that is, items not ordinarily produced commercially for civilian consumption—may be placed in the contingency retention category.

(5) Disposable excess stocks are stocks classified as excess to the needs of the reporting Army command and those previously declared as surplus for which disposal has not yet been accomplished.

(6) Claimant stocks are stocks on hand which the Army is holding for the Navy, Air Force, and other agencies (such as Atomic Energy Commission). Stocks held for the National Guard and other Army Reserve components are not carried in this claimant classification but are combined with those of the active Army.

In transit stocks are those to which title has passed to the Army, which are en route (*a*) from manufacturers or suppliers, but which have not been received physically by the Army; (*b*) from CONUS (continental United States) depots to overseas commands or vice versa; (*c*) from CONUS depots to CONUS commands; and (*d*) among CONUS depots, which have not been reported as received by the consignee depots.

The data in the summary table (table 30) representing Army inventories covers all depot inventories. Korean stocks were incorporated into the financial inventory accounting system on July 1, 1956. The Army on March 31, 1957, brought under the financial inventory accounting system the prepositioned ammunition stocks accountable by the Seventh Army in Europe. The depot stocks of Seventh Army are maintained exclusively for the close support of tactical units and are considered by Army to be more nearly comparable to supplies in the hands of troops rather than under supply system inventories.

TABLE 30.—*Supply system inventories (including stock fund), Department of the Army, as of June 30, 1957*

[1] Not stratified as of June 30, 1957.

[2] Stock excess to 1 Army command but not necessarily excess to Army supply system.

A brief analysis of the Army supply system data in table 30 shows that over 64 percent of the total is represented by Ordnance Corps supplies and equipment. Over 27 percent of Army's overall total is in the single category of ammunition, guided missiles, and related equipment. Other large categories, each with inventories of over a billion are (1) Ordnance tanks, (2) vehicle parts, (3) Quartermaster clothing, (4) Signal Corps items, and (5) Engineer Corps stocks.

Army's total supply system inventories increased 9.3 percent between June 1956 and June 1957. This increase was due primarily to the inclusion of the Korean stocks and the revaluation of unserviceable inventory.

As of June 30, 1957, 29.8 percent of the distributed portion of Army's supply system inventories were classified as peacetime operating, 28.6 percent mobilization reserve; 19.8 percent was in the economic and contingency retention; 20.0 percent excess, and 1.8 percent claimant stocks. Chart 8 presents the Army supply system inventories by these major classifications.

Army stock fund inventories. Included in the $21.9 billion inventories shown in table 30 are $7.7 billion carried in the Army stock fund. This $7.7 billion of stock fund inventories in the Army represent 35.0 percent of the total inventories reported by the Army in its supply system.

About 40 percent of the Army stock fund inventories is in the Ordnance Corps category. The Quartermaster group of categories amounts to $2.6 billion and represents 33.4 percent of the total Army stock fund (table 31).

[3] Includes $132,300,000 of single manager inventories and the remainder in retail stock fund.
[4] Stock excess to 1 stock fund division or a stock fund branch, but not necessarily excess to the supply system.

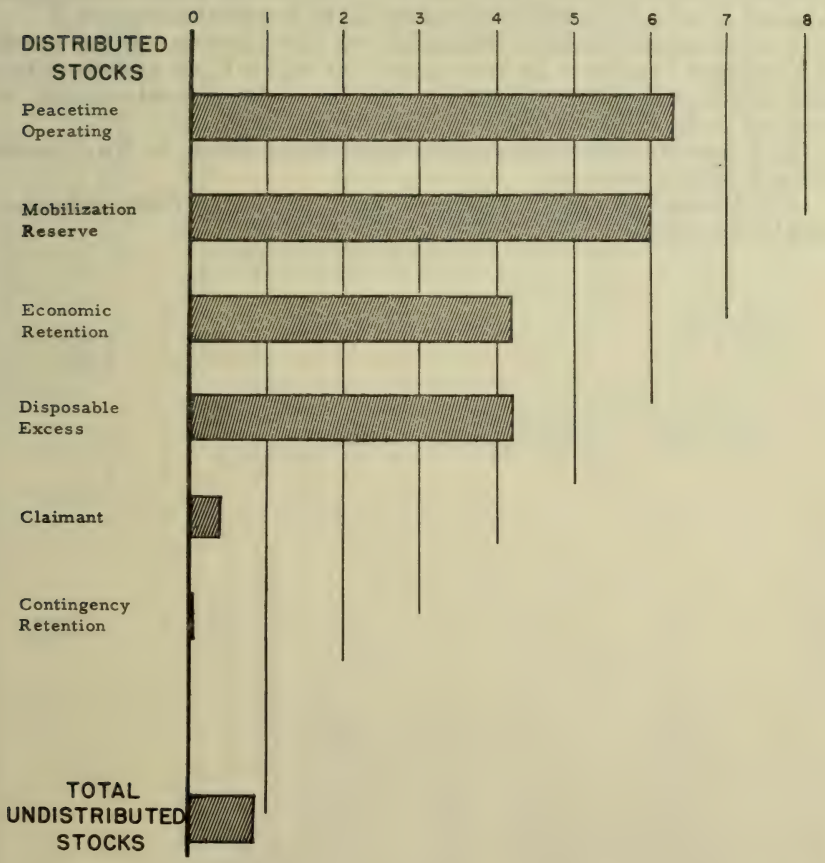

CHART 8

SUPPLY SYSTEM INVENTORIES
(Including Stock Funds)

DEPARTMENT OF THE ARMY

AS OF 30 JUNE 1957

BILLIONS OF DOLLARS

4. Navy supply system inventories (excluding Marine Corps)

For inclusion in this report, Navy's supply system inventories are grouped into 32 major categories. Six stratification accounts, in addition to stocks in transit, are employed by Navy to indicate the broad retention groups into which its inventories are divided. The definitions for these stratification classifications are as follows:

(1) Peacetime operating stocks are stocks on hand designed to meet the peacetime force materiel requirements.

(2) Mobilization reserve stocks are stocks on hand retained to meet general demand after M-day, plus those on hand reserved for specific mobilization programs such as advanced base components, mounting out of Marine Corps units, defense equipping of merchant ships and harbor defense.

(3) Economic retention stocks are stocks on hand for which there is a firm predictable demand so that retention of stock to meet the demand is advantageous, considering all of the costs involved.

(4) Contingency retention stocks are that portion of the stocks of a military type item in long supply for which there exists no foreseen requirement, but which it has been determined should be retained for possible military or defense contingencies.

(5) Disposable excess are stocks determined excess to Navy needs but not yet disposed of.

(6) Claimant stocks are stocks on hand which the Navy is holding for other agencies.

[1] Excludes $205,009,000 shipboard supplies and $848,300,000 aircraft spare engines.

A brief review of the data in table 32 indicates that the category of major ordnance equipment and explosives, totaling $5.8 billion, constitutes the largest single supply category (40.0 percent) of the Navy supply system inventory. Two other categories have inventories valued at over a billion dollars. These are aeronautical material, representing 15.7 percent of the Navy total and ordnance repair parts equaling 7.8 percent of the total. These 3 inventory categories together constitute 63.4 percent of the Navy total at June 30, 1957.

Total value of Navy's supply system inventory increased $137.0 million above the amount reported a year ago. Disposable excess increased $89 million during the year. The contingency retention stocks increased $1,368 million, and the total undistributed stocks increased $583 million. Peacetime operating stocks decreased $622 million and mobilization reserve and economic retention stocks decreased $1,361 million. Peacetime operating and mobilization reserve stocks together represent 64.5 percent of the total distributed Navy stocks. Navy supply system inventories are presented graphically in chart 9.

Navy stock fund (exclusive of Marine Corps).—Table 33 shows the category and stratification classification of the Navy (exclusive of the Marine Corps) stock fund. The Navy stock fund carried 16.1 percent of the inventories in the Navy supply system.

All materials procured and/or stored in the Navy supply system for issue for maintenance and operating purposes are authorized to be carried in the Navy stock fund. Normally, this includes all consumable types of material and relatively minor items of equipment, including parts and components, used in the manufacture, assembly, maintenance or rebuild of end items for the military supply system.

Three new categories of material, capitalized in fiscal year 1957, were added to Navy stock fund inventory financing. These categories, capitalized on July 1, 1956, were: Photographic material, forms and publications and submarine repair parts.

A single-manager medical material division of the Navy stock fund was established in fiscal year 1957 as prescribed by the Secretary of Defense in the single-manager commodity assignment for medical material.

This division of the Navy stock fund includes such items as medical, dental, veterinary supplies and equipment, blood plasma, and all other items of related material.

Wholesale stocks in the medical category of each military service on hand and in transit over and above quantities necessary to be held and controlled in the retail distribution system of each military service were capitalized into the Navy stock fund. These Navy stocks were capitalized on January 1, 1957; inventories of the other military services were capitalized on April 1, 1957.

The Navy single manager receives all program requirements of the military services, computes the net requirements, and does the procuring, receiving, and wholesale distribution of the material.

Extension of Navy stock fund financing to material carried aboard tender and repair type vessels is being considered for implementation in fiscal year 1958. The plan will include Navy stock fund financing of material carried aboard these type vessels for fleet support as well as the vessel's own allowance of material. Minimum records of inventory and transactions will be maintained by the vessel with accounting and reporting accomplished by designated shore activities. Fleet-issue ships have been operating under this plan since July 1, 1955, and extension of the plan to tender and repair type vessels will bring all fleet support type ships under the same procedures.

[1] Includes $1,293,697,000 Marine Corps appropriation stores account stocks not stratified as of June 30, 1957.

5. Marine Corps supply system inventories

The Marine Corps supply system inventories are grouped in table 34 into 11 major categories. Total value of the Marine Corps inventory decreased $162 million, or 8.8 percent, during the year since June 30, 1956. The only category with an inventory in excess of a billion dollars is Ordnance, which shows a decrease of approximately $3 million during the fiscal year. Decreases are also shown in the electronics, general property, motor transport, and clothing categories. These data, by major classifications, are shown graphically for the Marine Corps in chart 10.

6. Air Force supply system inventories

The Air Force supply system inventory, including stock fund supplies, is presented in 23 categories, or materiel groupings, in table 36. Five inventory classifications constitute the major retention groups into which the total inventory is segregated. These are (1) operating and retention, serviceable; (2) operating and retention, reparable; (3) reserve stocks; (4) other claimants; and (5) excess.

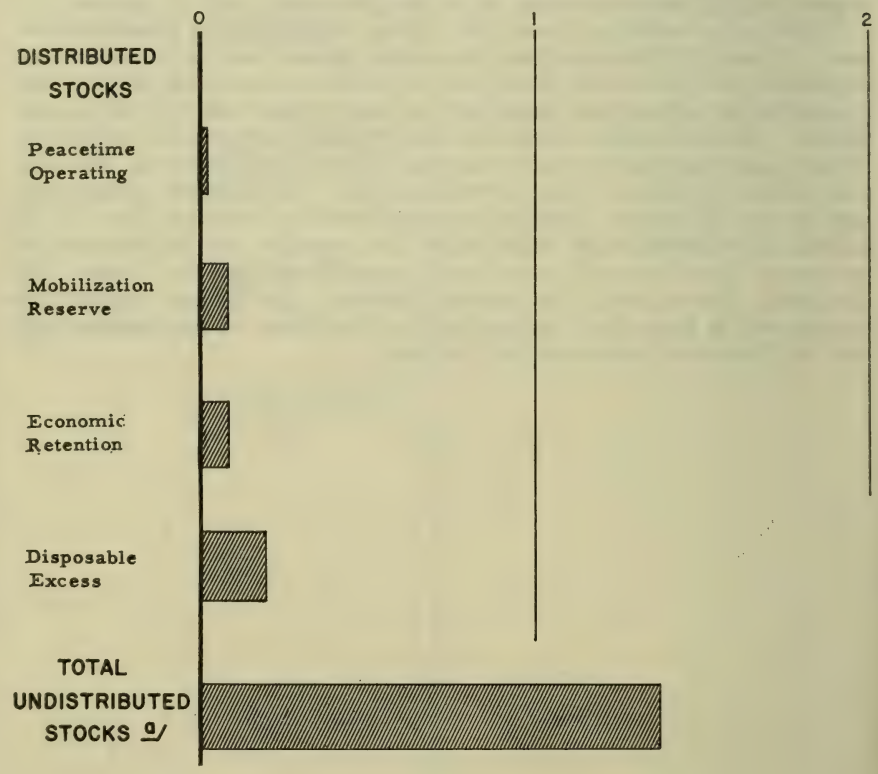

Definitions covering these Air Force stratification classifications are: (1) and (2) Operating and retention stocks, both serviceable and reparable, are the stocks which are required to meet both current and future needs (other than mobilization and special reserves) of the Air Force. These become excess only under specific criteria for each item. While some may be excess to normal current requirements, they are not excess to planned future requirements. (3) Reserve stocks consist of (*a*) all stocks classified as mobilization reserves, plus (*b*) all stocks administratively segregated for specific use in authorized projects. (4) Other claimant stocks are those held for Army, Air National Guard, and Air Force Reserve. (5) Excess stocks are stocks which have been determined to be excess to requirements of the Air Force and are awaiting disposal.

In transit	9,244	9,244						

The June 30, 1957, Air Force supply system inventory as reported represents an increase of $701 million or 5 percent over the comparable report for June 30, 1956. This may be attributed to a net increase of approximately $700 million in aircraft engines not reported in the supply system totals as of June 30, 1956.

Four of the supply system categories have inventories in excess of a billion dollars each. In descending order of magnitude these are (*a*) engine and engine spare parts; (*b*) aircraft instruments, assemblies, and components; (*c*) airframe spares; and (*d*) armament and photographic equipment and supplies. The four together constitute 63.1 percent of the dollar inventory total.

Operating and retention stocks represent 89.9 percent of the total distributed Air Force supply inventory, reserve stocks are 6.1 percent of the total while the remaining 4.0 percent is divided between other claimant and excess. Operating and retention stocks increased by $601 million during the year. Reserve stocks were increased by $60 million, excess stocks increased $291 million, undistributed stocks decreased $224 million, and claimant stocks decreased $26 million. The Air Force supply system inventories are shown by major classification in chart 11.

Air Force stock fund.—The Air Force stock fund consists of six divisions: Aviation fuels, clothing, medical-dental, general supplies, commissary, and Air Force Academy. The total inventory amounted to $637 million on June 30, 1957, a decrease of $137 million over the comparable report for June 30, 1956.

SECTION B. MILITARY AND GENERAL EQUIPMENT ISSUED FOR USE (INCLUDING PRODUCTION EQUIPMENT)

1. General

Quantitative records are maintained by the military departments of equipment taken from the supply system and issued to units for use. Except for major classes of equipment such as aircraft and ships, however, data are not available by specific categories for such stock or equipment in the possession of using units or troops. The monetary accounting reports of both Navy and Air Force normally show a total value only for such stocks. Army does not include its issued stocks and equipment in its monetary accounting system but it does use a periodic statistical report of the quantities of the major items to develop estimates of monetary values.

2. Office of the Secretary of Defense

Within the Office of the Secretary of Defense, major items of equipment in use as of June 30, 1957, represented a cost of $2.0 million. Office equipment and furniture accounts for 98 percent of this total.

3. Army, major military and general equipment in use

Army estimates that the value of major items of equipment in possession of Army troops and National Guard units was $4.6 billion as of June 30, 1957. This equipment consists of combat and support materiel such as artillery, small arms, chemical weapons, tanks, other combat vehicles, tactical and support vehicles, Army aircraft, guided missiles, and other major equipment.

4. Navy, military and general equipment in use

The acquisition cost of Navy's equipment in use is estimated at $28.6 billion as of June 30, 1957. Of this total, $20.5 billion represents the cost of 2,711 ships in the Active and Reserve fleets.

Service craft, such as utility land craft, minesweeping boats, open lighters, floating derricks, and harbor tugs totaled 2,006 as of June 30, 1957. These were valued at approximately $1 billion.

Navy program aircraft totaled 12,434 as of June 30, 1957, which includes operating aircraft, 9,421; logistical support aircraft, 2,196; and reserve stocks of 817. These aircraft are reported as costing $5.3 billion. Items of equipment other than production equipment, in use at shore installations on the report date, had an acquisition cost of $1.8 billion.

5. Air Force, military and general equipment in use

The June 30, 1957, figure representing Air Force cost of equipment in use was $24.4 billion. Its 28,501 aircraft are reported as costing $19.3 billion with all other in-use equipment valued at $5.1 billion. The aircraft total includes 2,176 in the custody of the Air National Guard, and 4 assigned to Civil Air Patrol, and 824 in the custody of the Air Force Reserve. The aircraft are valued at standard prices reflecting an average cost for each type of aircraft regardless of the contractor or fiscal year procurement, without reflecting engineering changes and modification costs subsequent to approval of the basic contract. There has been a small reduction in the number of aircraft during the fiscal year but the monetary value is $1.5 billion more than that reported a year ago. This increase is due mainly to the larger proportion of new jet-powered aircraft owned by the Air Force.

6. Inventory of production equipment

The acquisition cost of production equipment under Department of Defense control as of June 30, 1957, was reported as $5.3 billion, a slight decrease (less than 1 percent) from that on hand 1 year earlier. Production equipment includes metalworking machinery and other allied industrial equipment such as metal heat-treating furnaces, transformers, hardness-testing machines, balancing machines, etc.

Metalworking equipment located within the continental United States and controlled by the Department of Defense had an acquisition cost of $2.9 billion on June 30, 1957 (see table 39). This was an increase of $11 million, less than 1 percent, from the amount reported June 30, 1956. Small decreases reported by Army and Navy were more than offset by an increase in the Air Force total. The cost of the various individual types of metalworking equipment is shown in table 39.

The total number of metalworking equipment items in the Department of Defense on June 30, 1957, was 255,800. About 4,200 of these machine tools are used by Navy in overseas areas. Other items of production equipment controlled by the military departments totaled 389,400. This latter equipment is located within continental United States.

In addition to 88,600 machine tools, the Army reports that it has 169,000 other items of production equipment in use and in reserve which are used in the manufacture of various military end items and components. This production equipment, other than metalworking, had an acquisition cost of $1,607 million. All of the Army production equipment is within continental United States.

TABLE 38.—*Production equipment inventory, Department of Defense, as of June 30, 1957*

[Thousands of dollars]

	Total	Metalworking	Other
Department of Defense	$5,300,291	$2,991,638	$2,308,653

Navy	1,289,725	[1] 923,352	366,373
Air Force	1,403,475	1,067,756	335,719

[1] Includes $92,245,000 for cost of installing machine tools and $12,215,000 for cost of machine tools located outside continental United States.

TABLE 39.—*Inventory of metalworking equipment costing $500 or more each, continental United States, Department of Defense, as of June 30, 1957*

[Thousands of dollars]

Standard commodity classification	Department of Defense	Army	Navy (including Marine Corps)	Air Force
Total, metal working equipment	$2,887,178	$1,000,530	$818,892	$1,067,756
Metal cutting tools	2,408,100	821,326	699,333	887,441
3411 Boring	373,747	95,136	120,545	158,066
3412 Broaching	43,601	15,660	5,435	22,506
3413 Drilling	201,773	85,112	57,444	59,217
3414 Gear cutting	93,433	31,326	21,471	40,636
3415 Grinding	367,250	107,401	86,223	173,626
3416 Lathes	646,237	277,667	194,882	173,688
3417 Milling	467,703	128,061	143,769	195,873
3418 Planer	42,483	4,352	29,886	8,245
3419 Miscellaneous	171,873	76,611	39,678	55,584
Metal forming tools	479,078	179,204	119,559	180,315
3441 Bending	37,870	5,371	16,688	15,811
3442 Hydraulic press	218,994	69,525	61,464	88,005
3443 Mechanical press	130,143	76,464	16,413	37,266
3444 Manual press	3,945	2,953	606	386
3445 Punching	21,321	4,373	12,438	4,510
3446 Forging	40,698	7,716	6,450	26,532
3447 Wire strip	9,434	8,674	607	153
3448 Riveting	10,415	949	3,300	6,166
3449 Miscellaneous	6,258	3,179	1,593	1,486

Included in the Navy production equipment totals (apart from any production equipment in the supply system data) are 83,500 machine tools and 155,900 other items of production equipment such as railroad transportation, electrical distribution, materials handling, and construction and excavating equipment. The 155,900 items of production equipment other than metalworking had an acquisition cost of $366 million.

In addition to 83,700 machine tools, totaling slightly over $1 billion, the Air Force had 64,400 other production equipment items such as airfield maintenance, materials handling, and excavating equipment. These latter items cost at acquisition $336 million.

SECTION C. INVENTORIES HELD IN INDUSTRIAL FUNDS

Working capital funds are authorized by section 405 of title IV of the National Security Act, as amended. The use of industrial funds permits the financing of industrial or commercial type activities and the development of production costs to be used as a basis for charging the appropriations of customers for the products or services furnished to them by the fund.

As of June 30, 1957, 48 activities in the Department of Defense were operated under industrial fund charters. The Army had 22; the Navy 49 (including 26 separate printing activities); the Air Force 2 (1 of which is a printing activity located in 8 different plants and 1 a laundry and dry-cleaning activity operated at 47 installations). The total inventories, consisting of raw materials, supplies, work in process, and finished goods held in all industrial funds in the Department of Defense amounted to $305 million on June 30, 1957.

The industrial fund inventories for each group of activities within each department are shown in table 40.

SECTION D. NATIONAL INDUSTRIAL RESERVE

1. General

Public Law 883, 80th Congress, the National Industrial Reserve Act of 1948, provides for establishing "adequate measures whereby an essential nucleus of Government-owned industrial plants and a national reserve of machine tools and industrial manufacturing equipment may be assured for immediate use to supply the needs of the Armed Forces in time of national emergency or in anticipation thereof."

The properties still owned by the Government are managed by the General Services Administration (as successor to the Federal Works Agency) under general policies established by the Secretary of Defense. Since the Department of Defense has a contingent claim and production priority rights in all the national industrial reserve plants including those which GSA has disposed of with a national security clause and those plants leased, or in GSA custody, data on these are included in this section of this report. However, none of the properties in this reserve have been included in the totals for real property (pt. I) or metalworking equipment (pt. II, sec. B) of this report because they are held by GSA.

2. Plant reserves

The national industrial plant reserve contained 97 facilities as of June 30, 1957. The sponsoring military department and status of these plants on that date were:

TABLE 40.—*Industrial fund inventories, Department of Defense, as of June 30, 1957*

[Thousands of dollars]

Military department and type of industrial activity	Total inventories	Materials and supplies	Work in process and finished goods
Department of Defense, total	$305,330	$113,662	$191,668
Army, total	64,286	24,418	39,868
Arsenals and armories	41,870	18,528	23,342
QM Depot manufacturing and maintenance	1,964	1,149	815
Research activities	3,405	2,105	1,300
Printing plant and pictorial activities	1,643	431	1,212
Transportation terminals	15,404	2,205	13,199
Navy, total	240,210	88,507	151,703
Shipyards	138,176	48,501	89,675
Ordnance plants	65,218	9,773	55,445
Printing plants	1,270	1,081	189
Laboratories	7,428	1,301	6,127
Marine clothing and equipment	576	309	267
Military Sea Transportation Service	27,542	27,542	
Air Force, total	834	737	97
Printing service	519	422	97
Laundry service	315	315	

Sponsor	Total	Sold with recapture clause	Lease or contract	Inactive
Total	97	80	15	2
Army	22	18	4	
Navy	26	24	2	
Air Force	49	38	9	2

In keeping with Department of Defense policy to release as many reserve plants as possible to private corporations, 80 of the 97 plants have been sold subject to appropriate restrictions and recapture clauses, 15 are being operated under lease or contract agreement, and the remaining 2 plants in the reserve are being maintained at Government expense by the General Services Administration.

The net residual acquisition cost (original cost of construction and acquisition of entire plant less portions previously disposed of) of the 97 plants now in the reserve was $1.14 billion. This cost is made up of $1.01 billion for the 80 plants which have been sold to private interests and $128 million for the 17 plants still in custody of the Government.

The status of the 97 plants by category of product is shown in table 41. Of the 17 plants still owned by the Government, 9 produce basic raw materials or products in the magnesium, iron and steel and miscellaneous metal fields, and 8 are producing military end items and components, mostly in the aircraft, tank automotive, and electronic fields.

The 2 idle plants in the reserve consist of 2 magnesium facilities sponsored by the Air Force.

TABLE 41.—*National industrial reserve plants, by category of product and status, as of June 30, 1957*

Category of product	Total	Sold (with recapture clause)	Lease or contract	Inactive
All plants	97	80	15	2
Aircraft and components	24	19	5	
Aluminum	14	14		
Basic products, miscellaneous	2	2		
Chemical and petroleum products	4	4		
Electronics	2	1	1	
Explosives and ammunition loading	5	5		
Guns and ammunition	3	2	1	
Iron and steel	13	12	1	
Machine tools	1	1		
Magnesium	7	2	3	2
Metals, miscellaneous	6	3	3	
Shipbuilding and components	8	8		
Tank and automotive	4	3	1	
Miscellaneous (including 2 pipeline facilities)	4	4		

3. Equipment reserve

The total number of items of production equipment in the national industrial equipment reserve on June 30, 1957, was 4,648 as compared with 6,358 1 year ago. The reduction is accounted for largely by disposals effected which were directed as the result of surveys conducted at the two main storage points (Dixon, Ill., and Burlington, N. J.). The original acquisition cost of these 4,648 items was $14.4 million.

Of the total of 4,648 items in the reserve, 1,987 are carried in the central inventory of the production equipment redistribution group, available for lease to overcome production shortages of qualified contractors engaged in defense-supporting production. The remaining 2,661 equipment items are held in reserve for additional defense support and essential civilian production in the event of mobilization.

98914—57——9

PART III. PROGRESS IN RECORDING AND REPORTING PROPERTIES

SECTION A. OFFICE OF THE SECRETARY OF DEFENSE PUBLISHED DIRECTIVES AND INSTRUCTIONS AND CURRENT PROJECTS PERTAINING TO PROPERTY ACCOUNTING AND REPORTING

A digest of the principal regulations, directives, and instructions which provide for the recording or reporting of inventory data which have been issued by the Office of the Secretary of Defense since the enactment of title IV of the National Security Act and were in effect as of June 30, 1957, is presented in this part of the report. These current directives and instructions, in some instances, supersede or revise earlier directives and instructions on the subject of property accounting and reporting.

1. *Regulations covering the operation of working capital funds for industrial and commercial-type establishments (industrial funds), issued July 13, 1950*

These regulations provide for the establishment of 3 industrial funds—1 in each military department. They also establish the policy for the initial transfer of funds, inventories, and properties to the industrial funds; the handling of work orders and reimbursements for such work; provision for accounting and cost-accounting systems; authorization to incur obligations and expend funds; budgetary control; reporting on operations; and auditing.

2. *Basic regulations for the military supply system. (DOD Directive 4000.8), reissued January 5, 1957*

These basic regulations set forth important objectives in the field of supply which are to be implemented by the military departments as quickly as practicable and redefine the relationships between the basic regulations and other Department of Defense directives regulating supply management. They specifically require that "all supply accounting at depot, post, camp, station, base and installation level will be developed to achieve integration and uniformity on a quantitative and monetary basis, except for supplies and property with troop units and afloat, where periodic quantitative inventories only will be required, and that prescribed stock levels shall be uniform among military departments where similar conditions exist."

3. *Inventory of machine tools and other production equipment (DOD Directive 4215.12), issued April 25, 1957*

This directive provides for the preparation and maintenance of adequate inventory records of Department of Defense owned machine tools and other production equipment in the departmental industrial equipment reserves and for obtaining semiannual summary inventory reports.

4. *Regulations governing stock fund operations (DOD Directive 7420.1), reissued December 19, 1956, (a) authorized donations of surplus materiel from working-capital funds to Health, Education, and Welfare (instruction 7420.3) issued June 9, 1955, and subsequent amendments, (b) constructive methods of billing for stock fund sales (instruction 7420.4), issued July 2, 1957; (c) principles to be observed determining materiel to be included in stock funds (instruction 7420.5), issued November 26, 1956*

Directive 7420.1 provides for establishment of a stock fund in each of the four services setting up procedures for the issuance of charters; initial transfer of funds, inventories, and other assets; pricing policy; management policy, sales of stocks, accounting; authority to obligate and expend funds; budgetary control; reporting; and auditing. Instruction 7420.3 provides for establishment of accounts in each industrial fund and departmental stock fund and division thereof to reflect the authorized donations of surplus materiel to Health, Education, and Welfare. Instruction 7420.4 provides for the establishment of sales and accounts receivable at the time delivery of goods to a common carrier is made. Instruction 7420.5 clarifies the criteria for inclusion and exclusion of materiel for stock-fund financing.

5. Inventory of military real property (DOD Instruction 4165.14), issued March 31, 1954, and subsequent amendments

This instruction provides a uniform procedure to be followed by the military departments for the establishment and maintenance of a worldwide inventory of real property (land and improvements) and for the preparation of an abridged inventory in summary form. Specific instructions are contained in this instruction as to the categories, physical units of measure, the data, maps, and descriptive information which are to be kept on the records in the military departments and those that are to be summarized and reported to the Office of the Secretary of Defense. The military departments are required to keep their records current at all times and to submit summary reports semiannually.

6. Preparation of materiel planning study, DD Form 764 (DOD Directive 4200.1), issued April 9, 1954, and subsequent amendments

This directive provides for a uniform presentation of demand and supply data from which the Office of the Secretary of Defense and the military departments can discharge their responsibilities in the field of requirements and supply management. Worldwide assets on hand and their general location are shown. The directive is recordkeeping in nature and studies of major items currently being procured are requested by separate memorandums as required—usually semiannually. A list of items was developed for which a materiel planning study was requested from the military departments. This original list of items has been revised periodically for the purpose of adding or deleting items as they increase or decrease in importance.

7. Inventory management policies (DOD Directive 4140.1), issued October 12, 1956, and subsequent amendments, and a series of DOD instructions: (a) Management of mobilization reserve stocks (instruction 4140.2), issued July 28, 1954, and subsequent amendments; (b) management of materiel in long supply (instruction 4140.3), issued January 11, 1956, revising the issue of August 19, 1954; (c) management of materiel pipeline, including levels of supply (instruction 4140.4), issued September 3, 1954; (d) acquisition of materiel from GSA stores depots (instruction 4140.5), issued April 15, 1955, and subsequent amendment; (e) interservice supply support (directive 4140.6), issued July 5, 1955; (f) control, supply, and positioning of materiel (instruction 4140.7), issued July 20, 1955; and (g) inventory management report for materiel in the military supply systems (instruction 4140.9), issued April 27, 1956, and subsequent amendment

Directive 4140.1 establishes the Department of Defense basic policy for the management of materiel inventories and uniform definitions. It calls for a physical inventory of materiel and reconciliation of records at least once a year, and requires that each item of materiel, both for military or industrial use within a military service, shall be under the cognizance of only one inventory control point. These supply and inventory control points are required to maintain records, make reports, channel the transportation of materiel in the most economical manner, review the inventory status in relation to current and future requirements, determine and declare servicewide excess stocks, and schedule rebuilding of economically repairable stocks. Instruction 4140.2 establishes the policies regarding the retention, storage, care, and preservation of mobilization reserve stocks and their stock record accounting, reporting, and control. Instruction 4140.3 establishes policies, criteria, and procedures requiring the optimum use of materiel in long supply within the Department of Defense. Instruction 4140.4 prescribes definitions to be used for identifying the levels of supply in the materiel pipeline. Directive 4140.5 prescribes the policies and procedures governing Department of Defense acquisition of materiel from GSA. Directive 4140.6 sets policies, criteria, and procedures to facilitate optimum interservice use of available materiel within the Department of Defense. Instruction 4140.7 provides procedures, criteria, and guidance governing the control, supply, and positioning of materiel within Defense. Instruction 4140.9 prescribes semiannual and annual reporting as to the status, condition, purposes, and activity of the materiel inventories of the military departments.

8. Inventory of commercial- and industrial-type manufacturing facilities (DOD Instruction 4100.19), issued February 3, 1955

This instruction provides for the taking of an inventory by the military departments of commercial- and industrial-type manufacturing facilities, which are owned and operated by the Department of Defense and which produce products for its use.

9. DOD facility classes and construction categories (DOD Instruction 4165.3), issued March 11, 1955, and subsequent amendments

This instruction provides a standard numerical code for the identification and classification of facility classes and construction categories to permit uniform identification and classification of real property in planning, programing, budgeting, accounting, and reporting; exclusive of the civil-works activities of the Army Corps of Engineers or emergency construction in direct support of combat operations for any of the military departments.

10. Policy and procedures governing reporting and screening of excess personal property under control of DOD (DOD Instruction 4160.9), issued June 24, 1955, and subsequent amendments

This instruction establishes departmentwide policy and procedures for reporting personal property under Department of Defense control, which is excess to the needs of the organization holding such property. It routes notifications of excess personal property so that all elements of the Department of Defense may be informed of its existence and character. Provision is made for notifying all other elements of the Federal Gouernment of excesses remaining after Department of De-

fense needs are met. Finally, the instruction provides for disposal of such excesses which are not absorbed by the Federal Government.

11. DOD motor vehicle uniform reporting system (DOD Instruction 4500.7), reissued June 26, 1957

This instruction establishes standardization of terminology, definitions, and reporting of motor vehicles for use by the military departments in keeping the Department of Defense and other elements of the Federal Government informed as to the inventory of this class of equipment. The system, in addition, measures utilization and it further provides operating and maintenance cost data.

12. Policy and procedures relating to nonexcess personal property to be sold or exchanged for replacement purposes (DOD Instruction 4160.1), issued July 14, 1955

This instruction establishes Department of Defense policy relating to the exchange or sale of personal property for replacement purposes where the proceeds of the sale are applied to acquire similar items. It also prescribes policy and procedures affecting the utilization screening of such property before sale or exchange.

13. Materials handling equipment utilization and allowances (DOD Instruction 4145.11), issued August 29, 1955, and subsequent amendment

This instruction (*a*) establishes uniform criteria for determining quantitative requirements and allowances for the principal items of materials handling equipment, (*b*) provides a means for determining the quantities of such equipment required by an installation, and (*c*) prescribes reports and data pertinent to the effective application of criteria and analyses of equipment utilization.

14. Preparation of materiel planning study, aircraft engines (DOD Instruction 4230.2), issued September 7, 1955

This instruction establishes (*a*) a uniform system for recording requirements and supply data for aircraft engines and (*b*) a basis for the periodic review of current and future engine programs and a comparison of those programs to mobilization capabilities.

15. Real property: Acquisition, management, and disposal (DOD Directive 4165.6), issued September 15, 1955; program for management of real property maintenance activities (DOD Instruction 4165.9), issued June 23, 1955; and retention of real property (DOD Directive 4165.20), issued August 27, 1955, and subsequent changes

Directive 4165.6 brings up to date the Department of Defense policy relative to the acquisition, management, and disposal of real property and delegates the authority to accomplish these actions within each of the military departments to the respective Secretary. Instruction 4165.9 outlines a program for uniformly effective management of real property maintenance activities. Directive 4165.20 establishes Department of Defense policy governing the retention of real property by the military departments, establishes criteria by which such property will be retained or reported excess and provides for a review of real property holdings within the military departments.

16. Production/delivery status and progress reporting between military departments (DOD Instruction 4200.4), issued October 11, 1955, and materiel program control—principal items (DOD Instruction 4200.6), issued December 14, 1955, and subsequent change

Instruction 4200.4 establishes a requirement for, and a method to accomplish, the exchange of information between two or more of the military departments relative to production/delivery status and progress reporting in connection with basic items procured or produced by one military department for another as the result of a single procurement assignment agreement. Instruction 4200.6 establishes the criteria for determining end items of major importance and provides for the accumulation of data, the regular publication of studies, and the interchange of information between the military departments relative to those major items.

17. Military public works basic recordkeeping requirements (DOD Instruction 4270.3), issued October 13, 1955

This instruction provides for the maintaining of basic records, relative to military public works construction activities, at the headquarters of each of the military departments, from which summary data may be extracted as required.

18. Petroleum products status and program report (DOD Instruction 4220.1), issued January 20, 1956, and subsequent amendment

This instruction provides for quarterly reports from the military departments showing the procurement program and deliveries, consumption, sales, issues, inventories, and analyses of the reported data for selected petroleum products along with dollar values for the procurement program and deliveries.

19. Policies for implementation of single manager assignments (DOD Directive 5160.12), issued January 31, 1956, and a series of DOD Directives (a) single manager service assignment for ocean transportation (DOD Directive 5160.10), issued May 28, 1956, and subsequent amendment; (b) single manager assignment for subsistence (DOD Directove 5160.11), issued May 3, 1956; (c) single manager service assignment for traffic management within the United States (DOD Directive 5160.14), issued May 1, 1956, and subsequent amendment; (d) single manager assignment for clothing textiles (DOD Directive 5160.15), issued May 4, 1956, and subsequent amendment; (e) single manager assignment for medical materiel (DOD Directive 5160.16), issued May 4, 1956, (f) single manager assignment for petroleum (DOD Directive 5160.18), issued July 24, 1956, and subsequent amendment; (g) single manager assignment for airlift service (DOD Directive 5160.2), issued December 7, 1956, and subsequent amendment

Directive 5160.12 establishes the basic pattern of organization and procedures for single manager assignments for common-use items or common service activities, identifying the primary objectives of the single manager assignments as being the elimination of duplication and overlapping of effort between and among the military departments and the improvement of effectiveness and economy in supply and service operations throughout the Department of Defense. Directive 5160.10 creates a single manager service assignment for ocean transportation designating the Secretary of the Navy as the

single manager. Directive 5160.11 creates a single manager for subsistence designating the Secretary of the Army as the single manager. Directive 5160.14 creates a single manager service assignment for traffic management within the United States, designating the Secretary of the Army as the single manager. Directive 5160.15 creates the single manager assignment for clothing-textiles, designating the Secretary of the Army as the single manager. Directive 5160.16 creates a single manager assignment for medical materiel, designating the Secretary of the Navy as the single manager. Directive 5160.2 creates a single manager assignment for airlift service, designating the Secretary of the Air Force as the single manager.

20. Recording and utilization of idle production equipment (DOD Directive 4215.9), issued February 2, 1956, and subsequent amendments

This directive prescribes the policies and procedures for reporting and redistributing idle machine tools and certain other related production equipment owned or controlled by the Department of Defense.

21. Materiel program control of secondary items—clothing and textile equipment (DOD Directive 4200.7), issued May 5, 1956

This directive provides policies and criteria governing the uniform determination and application of requirements for clothing and textile equipment items in relation to procurement, retention, and disposal programs.

22. Uniform pricing policy for materials, supplies, and equipment financed by military appropriated funds (DOD Directive 7510.1) issued December 31, 1956

This directive provides the basic policies and criteria pertaining to pricing materials, supplies, and equipment in the supply distribution system other than those inventories financed under working capital funds.

23. Financial reports for Department of Defense stock funds (DOD Instruction 7420.6), issued June 10, 1957

This instruction provides the financial reports and budget forms to meet requirements of the Office of the Secretary of Defense in overall financial review, for use in the preparation of reports to the Congress and other Government agencies, and in financial control actions under the budget process.

24. Constructive method of billing within the Department of Defense for sale of material in the military supply distribution system (DOD Instruction 7420.4), issued July 2, 1957

This instruction establishes the requirements for billing and effecting reimbursements for sales within the Department of Defense of all materials, supplies, and equipment (material) in the military supply distribution system, except for aircraft (complete), ships, and sales of common items to the military assistance program (MAP).

25. Responsibility for application of automatic data processing systems to business procedures (DOD Directive 5105.11) issued January 2, 1957

This directive defines the responsibility of the military departments and the Office of the Secretary of Defense in the application of automatic data processing systems (ADPS) to business procedures; such as inventory accounting, etc.

26. Reporting requirements for excess, surplus, and foreign excess personal property (DOD Instruction 4160.12), issued July 3, 1956

This instruction establishes basic requirements for a Department of Defense reporting system for excess, surplus, and foreign excess personal property.

27. Current projects underway—uniform supply documentation

A move designed to streamline paperwork by requiring all military services to use the same forms in military supply operations was instituted July 1, 1957. All requisitioning, shipping, invoicing, and receiving of materiel henceforth will be done on a single series of 13 DD forms, which were developed for either manual or electrical accounting machines preparation, thus eliminating 120 (9 DD and 111 Army, Navy, Marine Corps, and Air Force) forms previously employed for these purposes.

This form standardization effort was undertaken when it became apparent that the lack of common supply forms was impeding the furnishing of materiel by one service to another; these standardized DD forms also will contribute to the successful operation of the single manager system for subsistence, clothing and textile materiel, medical materiel, and petroleum.

As the program progresses, supply support will be facilitated by the employment of the modernized standard DD forms; the task of training thousands of military and civilian personnel engaged throughout the Department of Defense in requisitioning, shipping, invoicing, and receiving materiel will be simplified considerably; and substantial savings will accrue from elimination of 120 forms previously stocked throughout all echelons of the supply systems of the military services.

SECTION B. DEPARTMENT OF THE ARMY

A Department of the Army task force is currently studying the content, reporting procedures, processing and use of real estate data with a view to making recommendations for more expeditious handling and possible integration of currently required information.

A new set of regulations and report forms pertaining to supply management was inaugurated by the Deputy Chief of Staff of Logistics responsible for property accounting. Regulations and report forms became effective in the last quarter of fiscal year 1957. In the area of secondary items (stock fund property and noncapitalized operation and maintenance equipment and supplies), a different report form was established for each of the command groupings—CONUS depots, CONUS stations, and oversea commands. These forms are adapted to the needs and conditions of their respective areas and they are designed to serve better management purposes.

A policy was established for pricing principal items (tanks, weapons, etc.) on the basis of the current price of the preferred item. Principal item inventory accounting has further been extended to include items in the hands of troops.

The estimated value of property not yet covered by financial inventory accounting amounts to approximately $0.5 billion, $450 million of which pertains to oversea theater depots and less than $50 million to CONUS class I installations (post, camps, and stations). The class I installations that are not covered are some minor stations.

In 1952 the Army started a program for reducing the number of different items in the supply system by cataloging and standardizing current items and by eliminating obsolete items. A reduction was accomplished despite the addition of many items required for new, complex equipment. There were approximately 1.5 million items in 1952. The number of cataloged items was reduced to 912,000 by June 1956. However, as of September 30, 1957, the number had increased to 957,000. The net increase of 45,000 items reflected a deletion of 138,000 old items as against an acquisition of 183,000 new items. The rapid increase of new items was caused, in part, by the acquisition of guided missile and Army aircraft parts. The transfer of responsibility for supply support and depot maintenance of Army aircraft from the Department of the Air Force to the Department of the Army on March 30, 1956, has increased the number of line items in the supply system of the Transportation Corps from approximately 30,000 to 63,000.

Implementation of the Army Aviation Depot plan, which authorized the transfer of depot supply and maintenance responsibilities from the Department of the Air Force to the Department of the Army resulted in an increase in Army assets of $12.6 million during fiscal year 1957. Full implementation of the plan over a 3-year period will result in transfers of additional air items in the amount of $51 million. It is anticipated that the Army equity in Air Force Depots will be reduced to nil by the end of fiscal year 1959.

The three single managerships assigned to the Department of the Army (subsistence, clothing, and textiles and traffic management) became fully operational during fiscal year 1957. The single managers organized their headquarters and field staffs; they published operating and procedural regulations; they assumed full responsibilities for those services and supplies which were formerly the concern of other military departments; and they solved basic problems area in coordination with these other departmental headquarters. Their target for implementation of July 1, 1957 was met.

Because the single manager assignments are just starting, experience to date is too short for measuring effectiveness. However, the concept is sound, and it will prove a valuable device for integrating all logistical operations. In time, with the gathering of statistical data, the better supply and services to the military departments and personnel efficiencies which is expected to be realized will be verifiable.

The Army has a 3-year plan to exploit the potential of automatic data processing and high speed communications equipment to improve the performance of logistics functions. The objectives of this plan are:

(*a*) Improved supply service to the troops.

(*b*) Better management of stocks.

(*c*) More effective manpower utilization.

(*d*) Feasibility of expansion of operations without corresponding increases in requirements for personnel, training, facilities, and equipment.

(*e*) Security, safety, and continuity of operations under emergency conditions.

(*f*) Economy of operations.

To date, equipment has been installed at 7 national stock and supply control points and 5 depots. Four additional systems are scheduled for early delivery.

SECTION C. DEPARTMENT OF THE NAVY

Considerable gains have been made in improving inventory management techniques for plant property and capital equipment. For example, a recent change decentralized accounting and recording, with the result that central mechanized records are being reduced by over a million cards. In addition, newly developed procedures enable asset data for designated plant property and capital equipment to reach requiring bureaus immediately after receipt; thereby eliminating a time lag of 3 to 6 months. Further, procedures for preparation of records at accountable activities and contractor plants have been standardized. Departmental management control is now based on selected asset data, so that only reports and records necessary for effective management are received. The new procedures retain the fidelity accounting of the former system—accountability and responsibility for each item of plant property and capital equipment is maintained from the time the item is procured until it is exchanged, sold, or transferred.

In the defense cataloging program, 1,275,077 items of supply have been identified. The Navy now is accelerating the program to convert all materials from standard Navy stock numbers to Federal stock numbers. The success of this effort is evident in the fact that current progress is ahead of schedule. By the end of fiscal year 1957, 784,851 items will be managed by Federal stock numbers; the balance will be converted shortly thereafter. Another program has been initiated wherein Federal stock numbers will be assigned and used for about 300,000 industrial production equipments.

Illustrative of recent progress by the Navy in the field of inventory management is the action taken to develop procedures enabling the assignment of one inventory manager for ground electronic equipments. Previously, the many and varied uses of these end items had prompted adoption of a system wherein each Bureau and office, which had funding responsibility, retained ownership of the equipment. However, after several years it became manifest that there were many inventory managers for the same equipments. The solution, jointly developed by affected bureau and offices, enabled the Navy to designate one inventory manager, and to thereby assure that all available assets were being applied to computed requirements.

In the defense standardization program, the Department of the Navy has maintained a continued and accelerated participation during the past year with identifiable benefits. Action through standardization simplification has enabled the Navy to eliminate approximately 80,000 items from the supply system with a consequent estimated reduction of inventory of $4 million. On one item alone, involving the modification of an internal combustion engine lubricating oil and the consequent discontinuance of another, the attributable savings are $500,000. By standardizing towed targets for surface gunnery, savings in inventory requirements amounting to $390,000 are expected to be realized by elimination of one type of target and revision of gunnery instructions. In addition, through completion of over 700 projects involving specifications and standards, there have been improvement and reduction in the number of varieties of sizes, kinds, and types of items which can be procured for the supply system.

Through utilization of electronic machines for the processing of supply information, the Bureau of Supplies and Accounts is fostering a program to refine and improve the Navy supply system operations.

At present the Navy supply system has 2 large scale electronic data processing equipments and 3 smaller type machines. Firm plans have been made for the acquisition of 3 additional large machines, 2 medium scale equipments and 4 small electronic data processing machines. In addition, other Navy supply activities are developing feasibility studies to determine the scope of their data processing requirements.

It is expected that the computers will do the supply jobs which have previously been considered impracticable or impossible on small-scale office equipment and conventional electric accounting machines. By providing better and far more current information—new kinds of information—electronic equipments promise to give management increased control over supply operations. It will be possible to adjust procurement and distribution to changing conditions by basing decisions on accurate information about demands, inventory, and the rate of production.

In exploiting the full potential of electronics for inventory management the Navy expects a major transformation in its ability to analyze the effect of a proposed tactical program on the material inventory and financial situation, and to respond accordingly.

The functions of the data processor in the inventory control application will be to digest the mass of source documents affecting inventory status and to issue timely reports based upon daily analyses of current conditions. Once a proposed program is scheduled, the computer can automatically determine for each item of supply the requirements during any selected period of time. Simultaneously with the computation of current operating requirements, the equipment can compute and prepare not-in-stock and excess reports by item, thus enabling management to anticipate critical situations in sufficient time to provide for effective action.

Largely because of the speed and stored program characteristics of the equipment, it is expected that the large volume data processing jobs such as "stratification of inventory" and preparation of the "line-item budget" will be more timely and realistic than heretofore.

SECTION D. DEPARTMENT OF THE AIR FORCE

The merger of the Air Force Accounting Operations, formerly handled in Washington, D. C., with the Air Force Disbursings Operations in Denver, Colo., during the third quarter of fiscal year 1957 was designed to facilitate all financial reporting. The Denver office and the Washington office now have the capability of reproducing and transmitting legal-size reports between the 2 offices at the rate of 1 page every 6 minutes. This machine operates on a principle similar to the news photo service. Denver has been tied in with the electronic data-processing system of the major air commands and can immediately convert data from distant points into usable accounting machine cards at its Air Force Accounting and Finance Center. Supply systems inventory data from the major air commands and Air Force depots is now being received over this network and summarized into inventory reports.

Two changes designed to simplify inventory reporting at major command level were accomplished during the first half of 1957. In January, instructions were released to reduce the volume of inventory accounting (monetary) detail cards transmitted from major air commands and prime depots to the Air Force Accounting and Finance Center, Denver, Colo. Concurrent changes in content, routing, and summarization of the inventory data improved the timeliness of the report while reducing the workload. In April, an additional refinement reduced the volume of electrical accounting machine cards required to be forwarded from major air commands to prime depots of the Air Materiel Command.

A new manual to improve the administration of the Air Force Stock Fund was finalized during the first half of 1957 and published July 1, 1957, as Comptroller Manual for Air Force Stock Fund AFM–170–10. This manual provides uniform accounting and reporting procedures for all divisions of the Air Force stock fund with the exception of Aviation Fuels Division and Air Academy Division. Control and consolidation procedures provided by this manual are applicable to all Air Force Stock Fund Divisions.

During the last half of fiscal year 1957 a system was developed to maintain an up-to-date detailed inventory of real property on electronic data processing in Headquarters, USAF. The programing operation is presently underway and the target date for full implementation is December 31, 1957. In addition to providing more timely and accurate data readily accessible to all using agencies, the system will eliminate approximately 90 percent of the major command reporting workload in this area by substituting the submission of changes only from commands to Headquarters, USAF, instead of a complete detailed inventory quarterly. It is estimated that the electronic data-processing system will result in annual savings of 11,500 machine-hours and 32,000 man-hours for major commands.

Fourteen large-scale and 43 medium-scale electronic data-processing systems were in operation in the Air Force at the end of June 1957. Eight of the large-scale and 33 of the medium-scale machines were used for maintaining and processing inventory records and for reporting derived statistics. The most extensive use of electronic data-processing systems for the foreseeable future will continue to be in the logistic area wherein about 50 large- and medium-scale electronic data-processing systems will be employed in inventory control and logistics requirements computations.

PART IV

WORLDWIDE RECAPITULATION OF U. S. GOVERNMENT REALTY AS OF JUNE 30, 1957

TABLES OF RECONCILIATION BETWEEN DEPARTMENT OF DEFENSE AND GENERAL SERVICES ADMINISTRATION REALTY ACREAGE AND COST DATA AS OF JUNE 30, 1957

WORLDWIDE RECAPITULATION OF U. S. GOVERNMENT REALTY AS OF JUNE 30, 1957

Type	Cost (in thousands of dollars)		
	In the United States	Outside United States	Total Worldwide
Federally owned real property included in overall report:			
Civilian executive agencies, offices and establishments	$13,118,300	$1,348,875	$14,467,175
Department of Defense:			
Civil functions, Corps of Engineers	3,667,000	8,000	3,675,000
Military functions:			
Department of the Army	7,190,000	1,087,000	8,277,000
Department of the Navy (including the Marine Corps)	6,733,000	1,481,000	8,214,000
Department of the Air Force	5,612,000	2,789,000	8,401,000
Properties managed by the Architect of the Capitol	[1] 334,820		[1] 334,820
Public domain realty, exclusive of buildings, structures and facilities, civilian and military	[1] 8,945,698	[1] 510,718	[1] 9,456,416
Mineral resources, civilian and military	[1] 4,716,520	[1] 42,000	[1] 4,758,520
Subtotal	$50,317,338	$7,266,593	$57,583,931
Investments in related areas, not included in overall report:			
Civilian agencies:			
Construction in progress			1,087,918
Leasehold improvements			75,429
Real-estate collateral acquired			174,789
Military functions: Construction in progress, cost of work in place:			
Corps of Engineers, civil functions			300,000
Department of the Army	671,000	271,000	942,000
Department of the Navy (including the Marine Corps)	724,000	310,000	1,034,000
Department of the Air Force	1,027,000	787,000	1,814,000
Total investment in related areas			[2] $5,428,136
Total, worldwide, U. S. Government realty			$63,012,067

[1] Estimated current present-day evaluations.

[2] All assets herein reported are shown in gross amounts with no deductions for allowances for losses and depreciation. Only wholly Government owned corporation assets and other wholly owned assets are included. Assets held under trust arrangements and interagency assets, including public debt securities owned are excluded. The assets are in the main, valued at acquisition cost (known or estimated).

Tables of Reconciliation Between Acreage and Cost Data Covering Department of Defense (and Each Military Department) in the Department of Defense Inventory Report and the General Services Administration Report as of June 30, 1957

Reconciliation of acreage between General Services Administration and Department of Defense reports as of June 30, 1957

PART V

REALTY INVENTORY OF (1) EXECUTIVE AGENCIES, OFFICES, AND ESTABLISHMENTS OF THE UNITED STATES GOVERNMENT; (2) DEPARTMENT OF DEFENSE; AND (3) ARCHITECT OF THE CAPITOL, LOCATED IN CONTINENTAL UNITED STATES AS OF JUNE 30, 1957

98914—57——10

Realty Inventory—Executive Agencies, Offices, and Establishments of the United States Government, Including the Department of Defense, in Continental United States—As of June 30, 1957

[In thousands]

	Cost
Civilian executive agencies, offices, and establishments	$13, 118, 300
Department of Defense:[1]	
Civil functions, Corps of Engineers	3, 667, 000
Military functions:	
Department of the Army	7, 190, 000
Department of the Navy (including Marine Corps)	6, 733, 000
Department of the Air Force	5, 612, 000
Total	36, 320, 300

[1] Includes original cost of all property owned and/or controlled by the Department of Defense. These figures include leasehold improvements, easements, and permits as noted on DOD–GSA cost reconciliation table on p. 138.

GENERAL SERVICES ADMINISTRATION
Washington, D. C., December 5, 1957.

Hon. WILLIAM L. DAWSON,
Chairman, House Committee on Government Operations,
House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: We are pleased to submit the attached summary tabulations of the real property owned by the Federal Government throughout the world. They were compiled from the detailed inventory reports submitted to the General Services Administration by the various real property holding agencies.

As of June 30, 1957, the Federal Government owned real property throughout the world with an acquisition cost of $42.9 billion. Properties costing $36.2 billion or 84.4 percent are located in the United States, while those properties located overseas cost $6.7 billion or 15.6 percent of the total.

A statement on the authority and scope of the inventory is also attached.

The full real property inventory report, together with supporting detailed inventory listings, will be forwarded to you as soon as completed.

Sincerely yours,

FRANKLIN G. FLOETE, *Administrator.*

INVENTORY OF REAL PROPERTY OWNED BY THE UNITED STATES THROUGHOUT THE WORLD AS OF JUNE 30, 1957

AUTHORITY

An inventory of real property owned by the United States throughout the world, as of June 30, 1957, is being compiled by the General Services Administration pursuant to the request of the chairman of the House Committee on Government Operations in a letter dated June 19, 1957.

A similar request for such an inventory was made by the Senate Committee on Appropriations.

SCOPE

This inventory includes all real properties owned by the United States Government throughout the world. It is based on detailed inventory reports submitted by the participating agencies as prescribed by General Services Administration Circular No. 80, Revised, dated July 3, 1957.

In the case of properties outside the United States, those located in United States Territories and possessions are shown separately from those located in foreign countries. The Department of Defense (military functions) furnished only summary figures with regard to total acreage and total cost for its real properties located outside the United States.

It does not include any lands owned by the sovereign governments of the various United States Territories and possessions. Neither does this inventory cover any lands which are administered by the United States under trusteeship by authority of the United Nations.

The inventory includes real property declared to be excess to the needs of the holding agency or surplus to the needs of the United States Government. Data with respect to buildings, structures, and other facilities in process of construction are included in this inventory only if they were available for use as of June 30, 1957.

The inventory excludes residential and farm properties acquired by the Federal Government through foreclosure incident to a lending operation or other Federal aid project. It also excludes property owned by the District of Columbia government.

The inventory excludes machinery, processing equipment, demountable and movable structures, and furniture and special use items, which were not considered part of the realty reported.

Properties managed by the Architect of the Capitol and those held in trust by the United States Government are not included in the summary tabulations

Cost figures shown are the actual acquisition costs, where available, and estimated costs (as of date of acquisition) where actual costs are not available. Costs include all capital improvements and such items as plumbing, elevators, heating and lighting fixtures, air-conditioning systems, etc., which are normally required for the functional use of a building. In addition, costs also include such items as safes, vaults, etc., which are built into the structure or are permanently affixed thereto.

No costs have been included in this inventory for (1) unreserved public domain; (2) public domain reserved for national parks, national forests, military installations, and other purposes; and (3) historical sites where such sites have been acquired by methods other than by purchase. However, the acreage for such lands is included in the inventory.

TABLE 1.—*Federal real property throughout the world, as of June 30, 1957*

Agency	Number of buildings	Floor area (square feet)	Acreage	Total cost (thousands)

GENERAL SERVICES ADMINISTRATION,
Washington, D. C., July 3, 1957.

GENERAL SERVICES ADMINISTRATION CIRCULAR NO. 80, REVISION NO. 2

To: Heads of Federal agencies.
Subject: Annual reports on Federal real property holdings

1. General

This circular prescribes annual reports necessary for the maintenance and publication of an inventory of Federal real property holdings covering real property owned by and leased to the United States Government as of June 30 each year; and forms with detailed instructions for the preparation and submission of these inventory reports to the General Services Administration by the holding agencies.

2. Authority

The Senate Committee on Appropriations in Report No. 237, dated May 12, 1953, covering the first independent offices appropriation bill for 1954, requested the General Services Administration to compile an initial inventory of Federal real property. This inventory covered federally owned real property in the continental United States, as of December 31, 1953.

The Senate committee, in Report No. 411, dated June 2, 1955, on the first independent offices appropriation bill for 1956, requested that a second inventory report be compiled as of June 30, 1955, and as of the end of each fiscal year thereafter. It was further requested that the inventory be expanded to cover real property owned by the United States Government in United States Territories and possessions and in foreign countries.

In Senate Report No. 2041, dated May 24, 1956, the Senate Committee on Appropriations requested the General Services Administration to expand the inventory to also cover real property leased to the United States Government.

3. Holding agency

For purposes of the inventory of real property owned by the United States Government, the holding agency is the one which has the authority to take possession of and assign and reassign such property or any portion thereof regardless of the manner in which the property was acquired, or what agency is currently using the property. This is in accordance with the provisions of section 3 of Accounting Systems Memorandum No. 32, issued by the General Accounting Office on April 13, 1954.

For purposes of the inventory of real property leased to the United States Government, the holding agency is the one which currently administers the lease and makes rental payments to the lessor, regardless of which agency executed the original lease or is currently using the property.

4. Coverage

The inventories prescribed by this circular shall cover all land, buildings, and other structures and facilities located in the United States, in United States Territories and possessions, and in foreign countries, which are owned by or leased to the United States Government, or wholly owned Federal Government corporations.

(*a*) *Owned property.*—The annual reports of real property owned by the United States Government shall include (1) unreserved public domain; (2) public domain reserved for national forests, national parks, military installations or other purposes; (3) property in which the United States Government has a life interest; and (4) property acquired by purchase, construction, donation, and other methods of acquisition. They shall also include all buildings or structures owned by the Federal Government, whether or not located on Government-owned land. Separate annual reports shall also be submitted for real properties held in trust by the Federal Government.

Items to be excluded from the annual reports are: (1) residential and farm properties acquired through foreclosure incident to a lending operation or other Federal aid project; (2) rights-of-way and easements granted to the United States Government; (3) machinery and processing equipment which are not part of the realty; and (4) sovereign-owned lands of the Governments of the various United States Territories and possessions.

(*b*) *Leased property.*—The annual report of real property leased to the United States Government shall include all property leased from private individuals, organizations, municipal, county, State, and foreign governments, as evidenced by a written agreement, involving a monetary consideration and a landlord-tenant

relationship. It shall also include right of use and occupancy obtained under eminent domain proceedings or equivalent procedures.

Items to be excluded from the annual reports are: (1) real property occupied under permit or other arrangements with other Federal Government agencies or wholly owned Federal Government corporations; (2) leasehold improvements (but, Government-owned buildings or structures erected on leased land shall be reported as federally owned); (3) rights-of-way and easements; and (4) real property leased rent free or for nominal rent, except that reports shall be submitted for property which is significant or where the lease specifies payment to the lessor for utilities and or services.

Examples of properties to be excluded are: (1) Building space and/or land made available to the Federal Government, rent free, or for nominal payment, such as rooms in courthouses, county buildings, universities, etc.; and (2) land upon which the Government has been granted an easement, right-of-way, or permit to place power transmission lines, gaging stations, fire lookout towers, revetments, etc. Determination as to whether the item is significant and is rent free or for nominal rental is the responsibility of the reporting agency. Thirty-fifth Comptroller General Decisions, page 713, is suggested as a guide to help resolve questions pertaining to the definition of "nominal payment."

5. *Reports to be submitted*

(*a*) *Inventory of real property owned by the United States Government.*—Each holding agency shall prepare, in accordance with the instructions in attachment 1a, and submit to the General Services Administration a separate report on GSA Form 1166, Annual Report of Real Property Owned by the United States Government (attachment 1), for (1) each newly acquired installation; (2) each installation with increases or decreases, of $1,000 or more affecting any line item or the total for the installation, or in acreage, irrespective of costs, which have occurred since the submission of the previous report; (3) each installation which has been declared excess, in whole or in part. Reports may also be submitted to revise items previously reported.

In the case of changes under "(2)" above, an adjusted report shall be submitted covering the entire installation. This adjusted report shall be a complete restatement giving effect to all installation changes such as acquisitions, dispositions, construction, and corrections of errors or omissions in the previous report.

Each holding agency also shall prepare and submit to the General Services Administration, for each bureau or other major organizational unit a report on GSA Form 1209, Summary of Number of Installations Owned by the United States Government (attachments 2 and 2a), regardless of whether or not changes have occurred since the previous report. Separate reports on GSA Form 1209 shall be submitted for properties (1) in the United States, and (2) outside the United States.

The annual inventory reports (GSA Forms 1166 and 1209) shall be submitted as of June 30, each year. An original and one copy of these reports shall be submitted to the General Services Administration, Office of the Comptroller, Washington 25, D. C., not later than September 1 of each year.

Whenever possible, data reported shall be based on detailed real property records and related documents in the holding agency's files. Where such records or documents are not available, estimated data, so identified may be used. However, as soon as practicable, detailed real property records (and related documents) shall be established and maintained on a current basis by the holding agencies.

(*b*) *Inventory of real property leased to the United States Government.*—Each holding agency shall prepare and submit to the General Services Administration a report of its leased real property holdings as of June 30 each year, on GSA Form 1166A, Annual Report of Real Property Leased to United States Government (attachment 3), in accordance with the instructions in attachment 3a.

Each holding agency also shall prepare and submit to the General Services Administration, for each bureau or other major organizational unit, a report on GSA Form 1209A, Comparative Summary of Properties Leased to the United States Government (attachment 4). Separate reports on GSA Form 1209A shall be submitted for properties (1) in the United States, and (2) outside the United States. Instructions for the preparation of this form are set forth in attachment 4a.

An original and one copy of each report shall be submitted annually to the General Services Administration, Office of the Comptroller, Washington 25, D. C., not later than September 15 of each year.

(c) *Optional reporting method.*—Agencies which have electrical accounting machine equipment may make arrangements with the General Services Administration, Office of the Comptroller, to furnish detailed machine listings, together with the supporting punchcards, in lieu of GSA Forms 1166, 1209, 1166A, and 1209A.

6. Supplies of forms

GSA Forms 1166, 1209, 1166A, and 1209A may be obtained from the General Services Administration, Office of the Administrative Assistant to the Administrator, Administrative Facilities Division, Printing and Distribution Section, Seventh and D Streets SW., Washington 25, D. C., telephone: Republic 7–7500 (Government dial code 181), extension 6453.

7. Agency liaison

Each holding agency shall designate an official to serve as agency representative on this real property inventory. The same representative may be designated, if desired, for the United States Government-owned and the leased real property inventories. The General Services Administration, Office of the Comptroller, Washington 25, D. C., shall be advised in writing of the names of all such representatives or any changes in such designation.

8. Inquiries

For additional information regarding the content of this circular, or any questions or problems relating thereto, agency representatives may communicate with the General Services Administration, Office of the Comptroller, Washington 25, D. C., telephone: Executive 3–4900 (Government dial code 183), extension 4131.

INSTRUCTIONS FOR THE PREPARATION OF GSA FORM 1166—ANNUAL REPORT OF REAL PROPERTY OWNED BY UNITED STATES GOVERNMENT

1. General instructions

(*a*) *Preparation of reports.*—GSA Form 1166—Annual Report of Real Property Owned by United States Government, shall be prepared annually by all holding agencies as of June 30 each year. This report shall cover—

(1) Each newly acquired real property installation.

(2) Each installation previously reported to which increases or decreases (*a*) of $1,000 or over, affecting any line item or the total for the installation, or (*b*) in acreage, irrespective of costs, which have occurred since the submission of the previous report. Reports may also be submitted to revise items previously reported.

In the case of changes under (2) above, an adjusted report shall be submitted covering the entire installation. This adjusted report shall be a complete restatement giving effect to all installation changes, such as acquisitions, dispositions, construction, and corrections of errors or omissions in the previous report.

(3) Each installation which has been declared excess or surplus, in whole or in part. See *h* below for method of reporting.

Reports shall not be submitted for installations having no changes since the submission of previous reports.

(*b*) *Holding agency.*—For purposes of the inventory of real property owned by the United States Government, a holding agency is one which has the authority to take possession of and assign and reassign such property or any portion thereof regardless of the manner in which the property was acquired or what agency is now using the property. Examples of a holding agency, as shown in GAO Accounting Systems Memorandum No. 32, follow:

"a. For an office building or warehouse occupied by a Federal agency or agencies, upon determination by GSA, and for which GSA is responsible for elevator and guard service and for cleaning and maintenance, GSA is the holding agency.

"b. In case of special-purpose buildings, such as Coast Guard stations, military reservations, hospitals, and prisons, those agencies or bureaus thereof having control of building management and operations, including authority to assign or reassign space in such buildings, will be considered as the holding agencies."

Under provisions of GSA Regulations, Title 2—Real Property Management—a holding agency is responsible for the custody of and accountability for its real property, including those which have been declared exesss or surplus. Consequently, the holding agency shall continue to report such excess or surplus property as provided herein until a final report is submitted after official documentation has been received indicating (1) that the installation has been permanently transferred to another Federal agency; or (2) that it has been completely disposed of by sale or other disposal method.

(*c*) *Reporting entity.*—An installation, such as a national forest or park, military reservation, hydroelectric project, etc., shall be considered as an individual reporting entity and shall be the subject of a single report, except for those installations located in more than one State. In the case of an installation located in more than one State, the portion located in each State shall be made the subject of a separate report, and thus shall be treated as a separate installation for purposes of this inventory. Each such report shall include all land, buildings, and other structures and facilities of an installation within a State.

In other cases, where a building and the site thereof, such as an office building, courthouse, post office, warehouse, etc., are all that comprise an installation, the property shall be considered as an individual reporting entity and shall be the subject of a single report. This same procedure shall be followed in the case of individual areas of improved or unimproved land.

(*d*) *Construction in process.*—Buildings, structures, and other facilities in process of construction shall be reported only if "available for service" as of the reporting date. However, sites acquired for such purposes, or for new projects, shall be reported regardless of whether or not the buildings, structures, or facilities are available for service. The usage classification of such sites shall be based on the intended use of the construction, whether or not in process.

(*e*) *Fixtures and equipment.*—For purposes of this report, the cost of buildings, structures, and other facilities shall also include the cost of such fixtures and equipment as are normally required for the functional use of the facility. For example, plumbing, heating, and lighting fixtures, elevators, air-conditioning systems, as well as items, such as safes, vaults, etc., which are built into the structure or are permanently affixed thereto, the removal of which would materially damage the structure. However, the cost of all machinery and processing equipment, as well as furniture, laboratory equipment, and special-use items, which are not part of the realty, shall be excluded.

(*f*) *Easements and leasehold improvements.*—The inventory of real property owned by the United States Government covers only real property "title to which is vested in the United States or in wholly owned Government corporations."

Consequently, the cost of easements, rights-of-way, and leasehold improvements to land, buildings, or structures and facilities occupied by the Government as lessee shall be excluded. However, the cost of federally owned buildings, structures and facilities located on leased land shall be included.

(*g*) *Utility systems.*—Where federally owned utility systems, such as gas, water, electric (power and light), sewer, etc., serve a single building, which is reported separately, the cost of such utility systems shall be included in the cost of the building. Where these systems (including water treatment, sewage disposal plant, etc.) serve several buildings and structures, their cost shall be reported under other structures and facilities.

(*h*) *Excess and surplus real properties.*—GSA Real Property Management Regulations, title 2, require that each holding agency having control of excess and surplus real property shall retain accountability therefor until official written notice is received of the transfer or sale of such property. Accordingly, all excess and surplus real property, for purposes of this inventory, shall be reported by the holding agency as provided in title 2, above, regardless of whether the property is (1) occupied by the holding agency, (2) on loan to another agency, or (3) being disposed of by another agency.

In case a holding agency has been officially advised that a portion of an installation (which had been determined to be excess or surplus) has been transferred or sold since the inventory date of the previous report, it shall submit an adjusted report on GSA Form 1166, covering the remainder of the installation retained by the holding agency.

Similarly, a report shall be submitted by the former holding agency on GSA Form 1166, where an entire installation has been transferred or sold since the inventory date of the previous report. However, in such a case, the only entries required shall be the identifying data, called for in blocks 1 through 10, and an appropriate notation, in block 26, "Remarks," regarding the transfer or sale of the installation.

Upon the official advice of the transfer of excess property between Federal agencies, the recipient agency shall report such transfer as newly acquired property. For purposes of this inventory, the recipient agency shall use the original cost to the Federal Government, adjusted for subsequent capital changes, and other pertinent data pertaining to the installation, based on the records of the transferring agency. Estimates shall be made, as required, when the records of the transferring agency are incomplete.

In the case of an installation previously reported which has had no changes since the previous report, but where changes (increases or decreases) have occurred in the excess or surplus status of the installation, in whole or in part, a report on GSA Form 1166 shall also be submitted. However, the only entries required shall be the identifying data called for in blocks 1 through 10, and an appropriate notation in block 26, "Remarks," regarding the change to the excess or surplus status. Reference shall be furnished, where appropriate, to the GSA control number assigned to SF 118, Report of Excess Real Property (see GSA Reg. 2–IV–201.00).

(*i*) *Change in name of installation.*—In the case of an installation previously reported, where the only change is that in the name of the installation, a report on GSA Form 1166 shall be submitted. However, entries shall be made only for the identifying data called for in blocks 1 through 10, using the new name in block 4. An appropriate notation shall also be made under block 26 "Remarks" indicating the name previously used.

2. Specific instructions for preparation of GSA Form 1166

(*a*) *Agency and property identification.*

Block 1. Enter the effective date of the report.

Block 2. *Holding agency number.*—For the purpose of identification, each agency shall assign a holding agency number to each installation for which a separate report is submitted.

Where a report reflects a change to an installation, which has been previously reported, the agency shall enter the same holding agency number used in the previous report.

Where a newly acquired installation is reported, the agency shall assign a new holding agency number to said property.

Block 3. *GSA control number.*—The GSA control number consists of two parts, separated by a dash. The first part, comprised of 4 digits, is the agency bureau code, while the second part, comprised of 5 digits, is the installation number. These control numbers are assigned by GSA.

If the report is for an installation previously reported, the holding agency shall fill in the "GSA control number" for that installation, using the same control number shown on the GSA machine listing of installations as of the latest inventory furnished to each reporting agency by the General Services Administration. It is essential that this GSA control number be filled in by the reporting agency so that the current report can be identified with the corresponding report previously submitted.

Where an installation is reported for the first time, this block shall not be filled in by the reporting agency.

Block 4. *Name of property.*—Enter the name assigned to the installation or facility being reported, such as United States customhouse, Fort Bragg, Rock Island Arsenal, etc. In case an installation is located in more than one State, a separate report is required to cover the portion of the installation located in each State. In such case, the name of the State shall be entered in this block after the name of the property.

Abbreviate the name of the property, where necessary, so that it will not exceed 23 letters (count each space between numbers or words as a letter). For example, "Yellowstone National Park" which has 25 letters should be abbreviated to "Yellowstone Nat Park."

Block 5. *Holding agency.*—Enter in this block the name of the holding agency; that is, the department, commission, administration, or authority. For example: Department of Commerce, Atomic Energy Commission, Veterans' Administration, or Tennessee Valley Authority.

Block 6. *Bureau or other major organization.*—Enter in this block the name of the reporting bureau, or other comparable major organizational unit, within the holding agency. For example: National Bureau of Standards.

Block 7. *State or country.*—Enter the name of the State, United States Territory or possession, or foreign country in which the real property is located. Where an installation is located in more than one State, a separate report shall be submitted to cover the portion of the installation located in each State.

Block 8. *City or town.*—Enter the name of the city, or town (where appropriate), in which, or near which, the property is located, provided the nearby city is located in the same State, United States Territory, possession, or foreign country entered in block 7; otherwise, do not fill in this block.

Block 9. *County.*—Enter the county or counties, parish or parishes, in which the reported property is located. (Separate reports for each county are not required.) If space is insufficient, complete the list under "Remarks," block 26, or on the reverse of the form.

Block 10. *Street address.*—Enter the street address, R.F.D., route number, or other local designation where appropriate.

Geographical code.—Enter the appropriate numerical code for the location of the installation as shown in blocks 7, 8, and 9 in the following sequence: State or continent (2 digits), city (4 digits), county or country (3 digits). This code may be obtained from the publication, Geographical Location Codes, issued by the Office of the Comptroller, General Services Administration. It may also be found in the latest GSA detailed inventory tabulation furnished to each reporting agency. Leave this space blank if the code is not known. (Example: Chicago, Cook County, Ill., will be shown as follows: "12–1670–031.")

(*b*) *Land.*—

Block 11. *Usage code and classification.*—Enter in this block the *present predominant use and related code* (see below) of the land area or site being reported. A breakdown of miscellaneous secondary usages is not required. If there are *significant* secondary usages, mention thereof should be made under "Remarks."

In the case of an installation comprised of both Government-owned and trust lands, separate reports on GSA Form 1166 shall be prepared for each.

Enter one of the following usage codes and classifications in blocks 11a and 11b, respectively, as appropriate:

Code	*Classification*	*Code*	*Classification*
01	Agricultural	16	Reclamation and irrigation
04	Grazing	18	Flood control and navigation
07	Forest and wildlife	19	Vacant
08	Parks and historic sites	20	Institutional
10	Office-building locations	30	Housing
11	Military (except airfields)	40	Storage
12	Airfields	50	Industrial
13	Harbor and port terminals	80	Other land
15	Power development and distribution	99	Trust land

The above usage codes and classifications shall be used exclusively by all agencies for purposes of reporting land on GSA form 1166.

If the report covers only Government-owned buildings or structures and facilities, but the land is (1) leased, (2) held under permit, or (3) jointly held and another agency is reporting such land, so state in this block. Give additional details in block 26, if necessary. However, no entries shall be made in blocks 12–16 when land is held under these conditions.

Block 12. *Acquisition code.*—Enter the code number for the method or methods of acquisition of the property being reported. The codes to be entered in this block are as follows:

Code No.	*Method of acquisition*
1	Public domain (applicable only in United States and Alaska).
2	Purchase, donation, exchange, etc.
3	Life interest (applicable only in the Canal Zone and foreign countries).

Include under code 1 all public-domain lands including those withdrawn from public domain. Include under code 2 any land acquired by purchase, donation, exchange, and other methods of acquisition (other than public domain and life interest). Include under code 3 all real property in which the United States Government has a life interest, such as those acquired by treaty or long-term lease (e. g., 99 years in perpetuity, etc.) and which the holding agency, as a matter of policy, considers as the equivalent to being owned by the United States.

Block 13. *Date(s) acquired.*—Enter the year in which the land was originally acquired by the Federal Government for each method of acquisition set forth in block 12. For public-domain land withdrawals show the date of the Executive order or the public-land order as the date of acquisition. If various portions were acquired at different dates, indicate the range of dates thereof, such as "1910–21."

Blocks 14 and 15. *Area, urban and rural.*—Entries shall be made in acres to the nearest tenth of an acre. If acres are to be reported as a whole figure, enter "0" to the right of the decimal; e. g., 10.0.

Urban: For purposes of this report, land shall be classified as urban when (1) located in an incorporated place of 2,500 or more, (2) in a densely settled unincorporated place of 2,500 or more, or (3) in a densely settled urban fringe area around cities of 50,000 or more. (Reference: United States summary and maps in vol. I of the 1950 population census, which lists urban places in each State.)

Enter in this block the area of urban land acquired by each method of acquisition reported in block 12.

Rural: Classify as rural all properties not classified as urban. Enter in this block the area of rural land for each method of acquisition reported in block 12.

Block 16. *Cost.*—Enter the cost to the Federal Government (in thousands of dollars) of the land for each entry in block 12, except for (1) properties held in trust, (2) unreserved public domain, (3) public domain reserved for national forests, national parks, military installations, or other purposes, and (4) land acquired for historical sites other than by purchase.

Costs need not be reported for acquired lands which are intermingled with public-domain lands and which constitute a relatively minor portion thereof.

The cost of sites for monuments, memorials, and statues shall be reported, except for sites of the types described in the two preceding paragraphs.

The cost of items incidental to the acquisition or preparation of land for use should, generally, be included in the cost of the land: For example—

Appraisal
Clearing
Damage to property of others
Drainage
Grading
Landscaping
Legal fees and expenses
Plats and surveys
Removal and relocation of the property of others as part of purchase contract
Removal of structures or facilities purchased, but not used

However, land improvements to public-domain lands shall be reported under "Other structures and facilities," blocks 23 and 24.

If cost is less than $500, enter cost as "0." Costs of $500 or over should be rounded to the nearest thousand. For example, if records indicate a cost of $500, round to "1"; similarly, enter "1" for cost of $1,200. If records for acquisition costs are not available, enter estimated costs and so indicate by the notation "E" after the amount. Such estimates shall be based on costs at date of original acquisition by the Government, as adjusted by subsequent capital changes.

Estimate, if not known, the cost of property acquired through donation, devise, forfeiture, or judicial process. This estimated cost should represent the amount the Government would have had to pay for the land if purchased at the date of original acquisition.

(*c*) *Buildings.*—

Block 17. *Usage code and classification.*—For purposes of this report, the *present predominant use* of a building shall govern its classification. A temporary building (not demountable) on a concrete foundation shall be reported. However, exclude temporary buildings set up expressly for construction purposes.

In the case of properties comprised of both Government-owned and trust buildings, a separate report on GSA form 1166 shall be prepared for the trust buildings. Data called for in blocks 20, 21, and 22 shall not be reported for properties held in trust by the reporting agency.

Buildings shall be classified on the basis of the following usage categories:

Block 17 (10). *Office.*—If a small segment of the total area of a building is used for other than office space, no attempt should be made to segregate such space. Such a building shall be classified as an "office" building.

Block 17 (21, 22, 23, and 29). *Institutional.*—Buildings devoted to institutional uses, such as hospitals, prisons, schools, libraries, chapels, and museums. Do not include minor emergency or health rooms, chapels, libraries, etc., which constitute only a small portion of a building used primarily for other purposes. Report information on lines 21, 22, 23, and 29, respectively, designated for hospitals, prisons, schools, and "other institutional buildings." The latter shall include institutional buildings, such as libraries and museums.

Block 17 (30). *Housing.*—Buildings used primarily for dwelling purposes, such as apartment houses, single or row houses, and barracks. Includes public housing, housing for military personnel, housing for institutional personnel, and housing built primarily for personnel in various Federal agencies.

Block 17 (40). *Storage.*—Buildings used for storage purposes, such as warehouses, ammunition storage, and cover sheds. Also include in this category garages used primarily for storage of vehicles or materials. Do not include such facilities as water reservoirs and oil-storage tanks, which are to be reported as "Other structures and facilities," blocks 23 and 24.

Block 17 (50). *Industrial.*—Buildings specifically designed and used primarily for production, manufacturing, or developmental purposes. Include in this category buildings used for the production or manufacture of ammunition, aircraft, ships, vehicles, electronic equipment, chemicals, aluminum, magnesium, etc. Also include in this category laboratories used for industrial purposes. Exclude laboratories of a nonindustrial nature.

Block 17 (60). *Service.*—Buildings used in connection with service activities, such as maintenance and repair shops, laundry and dry-cleaning plants, post exchanges, stores, garages (used primarily for vehicle maintenance and repair), and airport hangars.

Block 17 (80). *All other.*—Buildings which cannot be classified elsewhere. Whenever this classification is utilized, give a brief description of use in "Remarks" block.

Block 17 (99). *Trust buildings.*—All buildings held in trust by the reporting agency.

Block 18. *Number of buildings.*—Enter the number of buildings for each applicable usage classification printed in block 17.

Block 19. *Date(s) acquired.*—Enter the date the building was originally acquired by the Federal Government. In cases where several buildings of the same classification were acquired at different dates and are being reported on a single line, indicate the range of dates, such as "1930–42."

Block 20. *Gross floor area, total square feet.*—Enter the total gross floor area (applies to outer dimensions of the building), in square feet, for each class of building reported. However, floor area shall not be reported for buildings held in trust. Include the total floor area of the building(s), regardless of any secondary usages, including those areas used under permit or other arrangements by other occupying agencies.

Block 21. *Gross floor area, percent occupied.*—Enter the estimated percentage of occupancy or use for each applicable class of building printed in block 17. However, percent occupied shall not be reported for buildings held in trust by the reporting agency.

Buildings, which are outleased 100 percent, shall show the letters "OL" in this column. Where only a portion of a building is outleased, the percent occupied shall be the remaining percentage utilized by the Federal Government. A brief statement regarding the outlease shall be included in the remarks block.

Block 22. *Cost.*—Enter in this block the total cost to the Federal Government (in thousands of dollars) for each class of building reported. However, cost shall not be reported for buildings held in trust by the reporting agency. Costs shall include the cost of any capital improvements (additions or betterments) incurred subsequent to date of original acquisition by the Government.

If the cost is less than $500, enter cost as "0". Round other cost entries to nearest thousand as described for block 16, above.

In the absence of any recorded data as to costs, they shall be estimated and so noted by "E" after the amount. Such estimates shall be based on costs at date of original acquisition by the Government and not on current costs.

Estimate, if not known, the cost of the buildings acquired through donation, exchange, devise, forfeiture, or judicial process. This estimated cost should represent the amount the Government would have had to pay for the buildings if purchased at the date of original acquisition.

(d) Other structures and facilities.—

Block 23. *Usage code and classification.*—The various usage categories are preprinted in this block. The coverage of each of these usage categories follows:

Code	*Classification*
13	*Harbor and port facilities.*—Include docks, piers, jetties, and breakwaters situated on federally owned land.
15	*Power development and distribution.*—Include hydroelectric and other power-development projects which produce power for resale, generally consisting of dams, powerhouses, etc. Transmission lines which are an integral part of Federal power-development systems shall also be included, even though the power is produced by another Federal agency.
16	*Reclamation and irrigation.*—Include canals, laterals, pumping stations, storage and diversion dams, etc.
18	*Flood control and navigation.*—Include river improvements, revetments, dikes, docks, navigational aids, etc., situated on federally owned land.
40	*Storage (other than buildings).*—Include storage tanks, silos, igloos, underground vaults, open storage areas (improved only), etc.
50	*Industrial.*—Include facilities other than buildings used for production, manufacturing or developmental purposes, such as sliding shipways, retaining basins, pipelines, etc.
71	*Utility systems (heating, sewage, water, and electrical systems).*—Under this category, heating, sewage, water, and electrical systems are reported when they serve several buildings and structures of an installation. Where they serve a single building, which is reported separately, the cost of such utility systems shall be included in the cost of the building. This usage category for "utility systems" includes heating plants and related steam and gas lines; sewage-disposal plants, storm and sanitary sewer lines; water-treatment plants, wells, pumphouses, reservoirs, and pipelines; and electrical substations, standby or auxiliary power-plants, lighting structures, and conduits. Structures and facilities utilized by an installation in the production of its own power requirements (not for resale) shall be included in this category.
72	*Communication systems.*—Include telephone and telegraph lines, radio towers, etc.
76	*Roads and bridges.*—Include federally owned highways, roads, related culverts and connecting bridges. Also include roads within national parks and forests and other Federal institutions.
77	*Railroads.*—Include tracks and bridges, tunnels, fuel and water stations, etc., servicing railroads.
78	*Monuments and memorials.*—Include all Federal monuments, memorials, and statues.
79	*Miscellaneous military facilities.*—Include all structures and facilities of the Department of Defense (military functions) not included in any other classification.

80 *Other.*—Include sidewalks, parking areas, fences, trails, etc., which cannot be readily classified under the above categories.

Block 24. *Costs.*—Enter in this block the total cost to the Federal Government (rounded to the nearest thousand dollars) opposite each applicable usage category printed in block 23.

Costs shall include the cost of any capital inprovements (additions or betterments) incurred subsequent to the date of acquisition.

Costs shall not be reported for (1) other structures and facilities held in trust; and (2) historic structures, monuments, memorials, and statues donated to the Federal Government.

In the absence of any recorded data as to costs, they shall be estimated and so noted by E after the amount. Such estimates shall be based on costs at date of original acquisition by the Government, adjusted for subsequent changes, and not on current costs.

Estimate, if not known, the "cost" of structures and facilities acquired through donation, exchange, devise, forfeiture, or judicial process. This estimated "cost" should represent the amount the Government would have had to pay for the structures or facilities, if purchased, at the date of original acquisition.

Block 25. *Total cost: Land, buildings, other structures and facilities.*—Enter the sum of the totals of blocks 16, 22, and 24.

(*e*) *Remarks.*—

Block 26. If it is necessary to clarify or expand any entries beyond the space provided in the various blocks, make such notations in this block, or on the reverse of the form

Indicate in this block whether the installation being reported is being used by other than the reporting agency. In the event that an installation being reported on GSA Form 1166 is considered as excess, in whole or in part, to the needs of the reporting agency suitable notation shall be made in this block. This notation should indicate whether such installation, or portion thereof, has been or is being reported as excess to the General Services Administration or has been determined to be surplus in accordance with the provisions of GSA Regulations, Title 2, on Real Property Management. Where possible, the GSA control number assigned to SF 118—Report of Excess Real Property, shall be furnished.

(*f*) *Type of transaction.*—

Block 27. *Type of transaction.*—Check the appropriate box in block 27 to reflect the nature of the real property change for each installation between the current and the prior inventory report. Where practicable, include in "Remarks" a short notation giving an explanation of the change. A description of the form types of transactions follows:

Code	*Description*
1	*New acquisition.*—Include newly acquired installations obtained by purchase construction, etc. Partial additions to installations previously reported shall be included under code 4, below.
2	*Omission.*—Include only complete installations which were erroneously omitted from the inventory for the prior fiscal year.
3	*Dispositions.*—Include installations completely disposed of through sale, donation, exchange, or other disposition to private citizens and organizations or to State and local governments.
4	*Revisions.*—Include all changes not covered by one of the above codes. This includes partial acquisitions or dispositions to installations previously reported, capital improvements, writeoffs, corrections to prior year's reports, etc. Also include interagency and intra-agency transfers.

(*g*) *Signature and date.*—

Block 28. *Prepared by.*—Type in the name and title of the official responsible for the preparation of this report.

Block 29. *Signature.*—The official designated in block 28 shall sign his name in this block.

Block 30. *Date.*—Enter date on which the report was prepared.

INSTRUCTIONS FOR PREPARATION OF GSA FORM 1209—SUMMARY OF NUMBER OF INSTALLATIONS OWNED BY THE UNITED STATES GOVERNMENT

1. General instructions

This Summary of Number of Installations Owned by the United States Government, shall be prepared on GSA form 1209 by each holding agency for each bureau or other organizational unit, whether or not such agency is required to submit GSA form 1166 for its real property. A separate GSA form 1209 shall be prepared for each bureau or other comparable major organizational unit covering (*a*) properties in the United States, and (*b*) properties outside the United States. An original and one carbon of these forms shall be submitted to the General Services Administration by September 1, as of June 30, each fiscal year, accompanied by the related GSA forms 1166, where appropriate. The GSA form 1209 is intended to provide a reconciliation between the number of installations previously reported and the number of installations as of the new inventory date, to avoid omissions or duplications in the inventory.

2. Specific instructions for the preparation of this summary

(*a*) *Summary identification.*—Place a check mark in the appropriate box to indicate whether the accompanying GSA forms 1166 cover properties in the United States or outside the United States. Enter the effective date of the report.

(*b*) *Holding agency.*—Enter in this block the name of the holding agency, that is, the department, commission, administration, or authority. For example: Department of Commerce, Atomic Energy Commission, Veterans' Administration, or Tennessee Valley Authority.

(*c*) *Bureau or other major organizational unit.*—Enter on this line the name of the bureau or other comparable major organizational unit within the holding agency. For example: National Bureau of Standards, Bureau of Land Management, etc.

(*d*) *Line entries.*—

Line 1. Enter on this line the number of installations previously reported as of the end of the prior fiscal year. This number must agree with that shown in the detailed machine listings of the previous inventory reports, copies of which have been furnished by the General Services Administration to each holding agency.

Line 2. Enter on this line (in both columns) the number of installations previously reported which have been completely disposed of since the submission of the previous report.

Line 3. Enter on this line (in both columns) the number of reports (GSA forms 1166) affecting installations previously reported and remaining in the inventory for which changes have occurred during the fiscal year.

Line 4. Enter on this line the number of installations previously reported, which have had no changes requiring the submission of a revised GSA form 1166.

Line 5. Enter on this line (in both columns) the number of reports for newly acquired installations not previously reported to the General Services Administration by the present holding agency.

Line 6. Enter on this line the sum of lines 3, 4, and 5. This number represents the total number of installations controlled by the reporting agency as of the inventory date.

Line 7. Enter on this line the sum of lines 2, 3, and 5. This sum represents the total number of GSA forms 1166 currently being submitted.

(*e*) *Remarks.*—Give a brief résumé of major changes since the last inventory or of any significant trends which may be included in a report to the Congress to present the agency's viewpoint on real property changes.

(*f*) *Signature and date.*—

Prepared by: Type in the name and title of the official responsible for the preparation of the report.

Signature: The official designated as responsible for the preparation of the report shall sign his name in this block.

Date: Enter date on which the report was prepared.

INSTRUCTIONS FOR THE PREPARATION OF GSA FORM 1166A, ANNUAL REPORT OF REAL PROPERTY LEASED TO UNITED STATES GOVERNMENT

1. GENERAL INSTRUCTIONS

a. Preparation of reports

GSA Form No. 1166A, Annual Report of Real Property Leased to United States Government, shall be prepared annually by all holding agencies, covering their leased real property as of June 30 of each year. This report shall include all real property leased to the United States Government from private individuals and organizations, and from municipal, county, State, and foreign governments, as evidenced by a written agreement involving a monetary consideration and a landlord-tenant relationship. It shall also include right of use and occupancy obtained under eminent domain proceedings or equivalent procedures.

Leases which are rent free or for nominal rental shall be excluded, except that reports shall be submitted for property which is significant or where the lease specifies payment to the lessor for utilities and/or services. Also exclude easements, rights-of-way, encroachments, and real property occupied under permit or other arrangements with other Federal Government agencies or wholly owned Federal Government corporations. Examples of properties to be excluded are: (1) Building space and/or land made available to the Federal Government, rent free, or for nominal payment, such as rooms in courthouses, county buildings, and universities; and (2) land upon which the Government has been granted an easement, right-of-way, or permit to place power transmission lines, gaging stations, fire lookout towers, revetments, etc.

b. Holding agency

For purposes of the inventory of leased properties, the holding agency is the one currently administering the lease and making rental payments to the lessor, regardless of which agency made the original lease or is currently using the property.

c. Reporting entity

Real property leased to the United States shall be reported in the following manner:

(1) *Land and improvements.*—An installation consisting of land and one or more buildings, such as a supply depot, a consulate, etc., shall be considered as an individual reporting entity, except where the installation is located in more than one State. In the case of an installation located in more than one State, the portion located in each State shall be considered as an individual reporting entity.

(2) *Land only.*—An installation may consist of land only. This category includes unimproved leased lands, as well as leased land upon which federally owned buildings or other improvements have been constructed or are under construction. (The Federal agency controlling buildings and other structures owned by the United States Government on leased land shall report them on GSA Form 1166.) An installation consisting of land only shall be reported as follows:

(a) *Annual rental of $500 or more.*—Each installation consisting of land only with an annual rental of $500 or over shall be considered an individual reporting entity and the subject of a separate report.

(b) *Annual rental less than $500.*—Leases for land only with an annual rental rate less than $500 may be combined by location in a single report with all similar leases, as listed below:

(*1*) Major city in the United States. (See attachment 5.)

(*2*) State (excluding land in major cities).

(*3*) United States Territory or possession, or foreign country.

(3) *Lease-purchase property.*—Buildings constructed under lease-purchase agreement shall be considered as leased property and shall be the subject of a separate report during the life of the lease.

(4) *Buildings and portions thereof.*—Leases for buildings or portions of buildings shall be reported, as follows:

(a) *Annual rental of $2,000 or more.*—Each lease executed for a single building, or portion of a building, such as an office building, post office, or warehouse, with an annual rental of $2,000 or over, shall be considered an individual reporting entity and the subject of a separate report.

(b) *Annual rental less than $2,000.*—Leases executed for a single building, or portion of a building, with an annual rental rate less than $2,000 may be combined by location in a single report with all similar leases, as listed below:

(*1*) Major city in the United States. (See attachment 5.)

(*2*) State (excluding leases for buildings or portions of buildings in major cities).

(*3*) United States Territory or possession, or foreign country.

When GSA Form 1166A, Annual Report of Real Property Leased to United States Government, covers a consolidation of several leases; the agency files shall have data readily available showing the identification of each individual leased property. This data shall be made available to GSA representatives, when required.

2. SPECIFIC INSTRUCTIONS

a. Date, agency, and property identification

Block 1. Enter effective date of the report.

Block 2. *Holding agency number.*—For the purpose of identification each agency shall assign a number for each report submitted.

Block 3. *GSA control number.*—Leave this space blank. For use by General Services Administration only.

Block 4. *Name of property.*—Enter the commonly used name for the property being reported, such as United States post office, American embassy, Wilkins Building, etc. Where a building has no name use the street address or other local designation.

Abbreviate name, where necessary, so that it will not exceed 23 letters (count each space between numbers or words as a letter). For example, "First National Bank Building" which has 28 letters, should be abbreviated to "First Nat. Bank Bldg."

Block 5. *Holding agency.*—Enter the name of the holding agency; that is, the controlling department, commission, administration, or authority. For example: Department of Commerce, Atomic Energy Commission, Veterans' Administration, or Tennessee Valley Authority.

Block 6. *Bureau or other major organization.*—Enter the name of the reporting bureau, or comparable major organizational unit, within the holding agency; for example, National Bureau of Standards.

b. Location

Block 7. *State or Country.*—For leased property located in the United States, enter the name of the State in which the real property is located. (Where an installation is located in more than one State, a separate report shall be submitted to cover the portion of the installation located in each State.)

Block 8. *City or town.*—Enter the name of the city, or town, in which, or near which, the property is located, provided the nearby city is located in the same State entered in block 7. Otherwise, enter "None."

Block 9. *County.*—Enter the county or counties, parish or parishes, in which the reported property is located. (Separate reports for each county in the same State are not required). If space is insufficient, complete the list under "Remarks," block 24, or on the reverse of the form.

Block 10. *Street address.*—Enter the street address, R. F. D., route number, or other local designation where appropriate. Where the street address is used as the building name this block may be left blank.

Geographical code: Enter the appropriate numerical code for the location of the installation as shown in blocks 7, 8, and 9 in the following sequence: State or continent (2 digits), city (4 digits), county or country (3 digits). This code may be obtained from the publication, "Geographical Location Codes," issued by the Office of the Comptroller, General Services Administration. It may also be found in the latest GSA detailed inventory tabulation furnished to each reporting agency. Leave this space blank if the code is not known (Example: Chicago, Cook County, Ill., will be shown as follows: "12–1670–031".)

c. Land

Block 11. *Usage code and classification.*—Enter in this block the *present predominant use and related code* of the land area or site being reported. A breakdown by secondary usages is not required.

The usage codes and classifications applicable to the federally owned real property, defined in attachment 1a, shall be used exclusively by all agencies for purposes of reporting leased land on this form.

Blocks 12 and 13. *Area—Urban and rural.*—Land will be reported only when specifically provided for in a lease. Easement, rights-of-way, and encroachments will be excluded. Enter the total acreage for each usage code reported in block 11, rounded off to the nearest tenth of an acre. If the acreage to be reported is a whole number, enter "0" to the right of the decimal, e. g., 10.0.

Urban: For purposes of this report, land shall be classified as urban when (1) located in an incorporated place of 2,500 or more, (2) in a densely settled unincorporated place of 2,500 or more, or (3) in a densely settled urban fringe area around cities of 50,000 or more. (Reference: United States summary and maps in Vol. I of the 1950 population census, which lists urban places in each State). Enter in this block the total acreage of urban land acquired for each usage category reported in block 11.

Rural: Classify as rural all properties not covered under "urban" as defined above. Enter in this block the total acreage of rural land for each usage category reported in block 11.

d. Buildings

Block 14. *Usage code and classification.*—For purposes of this report, the *present predominant use* of the space in each leased building location shall govern its classification.

Leased buildings shall be classified on the same basis as federally owned buildings, except for post offices. Buildings or portions of buildings leased for use as post offices should be reported under code 14—post office. Applicable definitions of all usage categories, other than post offices, are contained in attachment 1a.

Block 15. *Number of locations.*—Enter the number of building locations for each applicable usage classification printed in block 14.

Block 16. *Floor area leased, total square feet.*—Enter the square feet of floor area under lease for each class of building reported. Include the total floor area under lease, regardless of any secondary usages or areas used by other occupying agencies under permit or other arrangements.

e. Other structures and facilities

Block 17. Place a check mark in the space provided in block 17 if the lease provides for the rental of any structures facilities.

Block 18. Enter the usage classification and a brief description of leased structures or other facilities. The usage classification applicable to the federally owned real property defined in attachment 1a, paragraph 2d, shall also be used exclusively for reporting leased structures and facilities in this block.

f. Lease terms

When the report covers a single lease, entries shall be made in blocks 19 through 23.

When a consolidated report is made covering several leases within the same installation, State, country, or city, entries shall be made only in blocks 19 and 23.

Block 19. *Number of leases.*—Enter the number of leases included in this report.

Block 20. *Effective date.*—Enter the numerical designation for the month and year that the lease became effective; e. g., 06–1941 for June 1941.

Block 21. *Expiration date.*—Enter the numerical designation for the month and year that the lease will terminate; e. g., 12–1959 for December 1959. If any option has been exercised, the expiration date of the extended period shall be used. In no case shall this date be prior to the effective date of this report. When the expiration date of the lease is indefinite, such as in a month-to-month or year-to-year lease, enter 99–9999.

Block 22. *Period renewal option.*—When the lease agreement provides that the United States Government may renew the lease at the expiration thereof, enter the renewal period rounded off to the nearest whole year. If there are no renewal provisions or if the renewal provisions are for less than 6 months, enter X. If there is a renewal option, but for an indefinite period, enter 01.

Block 23. *Annual rental rate.*—Enter the annual rental rate to the nearest whole dollar for the leased property. Where the rental period is less than 1 year or where the rental is paid on a monthly, daily, or other than an annual basis, convert the rate to an annual basis.

g. Remarks

Block 24. *Remarks.*—If it is necessary to clarify or expand any entries beyond the space provided in the various blocks, make such notations in this block and continue, as necessary, on the reverse of the form.

h. Signature and date

Block 25. *Prepared by.*—Type in the name and title of the official responsible for the preparation of the report.

Block 26. *Signature.*—The official designated in block 25 shall sign his name in this block.

Block 27. *Date.*—Enter the date on which the report was prepared.

Attachment 4a

Instructions for the Preparation of GSA Form 1209A—Comparative Summary of Properties Leased to the United States Government

1. General instructions

This Comparative Summary of Properties Leased to the United States Government shall be prepared on GSA form 1209A by each holding agency for each bureau or comparable major organizational unit. A separate GSA form 1209A

shall be prepared covering leased real property (*a*) in the United States and (*b*) outside the United States. An original and one copy of this form shall be submitted to the General Services Administration by September 15, as of June 30 of each fiscal year, accompanied by the related GSA forms 1166A. The GSA form 1209A is intended to provide (*a*) control over individual inventory reports on leased properties submitted on GSA form 1166A for the current year, and (*b*) a comparison between data previously reported and the current report to show data concerning changes in leases between inventory reports.

2. SPECIFIC INSTRUCTIONS

a. Summary identification

Check the applicable block in the upper right-hand corner of the form to indicate if the summary is for real property located (*a*) in the United States, or (*b*) outside the United States. Complete the fiscal year dates of the report.

b. Agency and bureau identification

Holding agency.—Enter in this block the name of the holding agency, that is, the controlling department, commission, administration, or authority. For example, Department of Commerce, Atomic Energy Commission, Veterans' Administration, or Tennessee Valley Authority.

Bureau or other major organization.—Enter in this block the name of the bureau, or comparable major organizational unit, within the holding agency; for example, National Bureau of Standards.

c. Summary data

Column (c) current GSA forms 1166A.—This column will contain a summarization and consolidation of statistics included in the Annual Reports of Real Property Leased to United States Government, GSA forms No. 1166A, submitted for the current inventory. Data for each line of this column will be entered as described below.

Line 1. Enter the number of GSA Forms No. 1166A submitted in the current report.

Line 2. Enter the total number of leases in effect on the inventory date, by adding the entries in block 19 of all GSA Forms 1166A submitted.

Line 3. Enter the total acreage leased by the bureau, or comparable major organizational unit, by adding the totals of blocks 12 and 13 of all GSA Forms 1166A submitted.

Line 4. Enter the total number of building locations leased by the reporting organization by adding the entries in block 15 on all GSA Forms 1166A submitted.

Line 5. Enter the total square feet of floor area leased by adding the totals of block 16 of all GSA Forms No. 1166A submitted.

Line 6. Enter on this line the total annual rental reported for leased real property by adding the entries in block 23 of all GSA Forms 1166A submitted.

Column (d) prior GSA Forms 1166A.—This column will not be completed for the first year an agency submits its report. Data for completion of this column will be obtained from column (c) of GSA Form 1209A submitted for the previous year's inventory report.

Column (e) difference.—On each line enter the result of column (c) minus column (d). Enter negative quantities in parentheses, thus, "(2)". Column (e) will not be completed for the initial report submitted by an agency.

d. Signature and date

Prepared by.—Type in the name and title of the official responsible for the preparation of the report.

Signature.—The official designated as responsible for the preparation of the report shall sign his name in this block.

Date.—Enter date on which the report was prepared.

e. Remarks

Any significant fiscal year difference should be explained or commented on in this block. When as a result of a new program, or termination of an old program, an agency's leasing activity changes, the cause thereof should be noted. Property management activities of a bureau or other major organization which result in net economies to the Government should be noted. Program plans which will affect future leasing operations should also be noted. Any items which the bureau believes would interest the Congress, regulatory executive agencies, or the general public should be recorded in this block.

The District of Columbia

Realty Inventory of the Architect of the Capitol as of June 30, 1957

[Current estimated evaluation of real property]

Land	$86, 930, 000
Buildings and improvements	247, 890, 000
Total real property	[1] 334, 820, 000

[1] Estimated present-day evaluation.

Architect of the Capital

REPORT OF FEDERAL REAL PROPERTY AS OF JUNE 30, 1957

United States Capitol buildings and grounds

Properties under legislative branch of the Government, occupied by the Congress.

Land:

Acquired by purchase.
Acquired: 1791 to 1956.
Area: 157 acres.
Cost: $21,918,512.
(Includes site acquired in 1949 for additional office building for United States Senate and in 1956–57 for additional office building and appurtenant facilities for United States House of Representatives.)

Buildings:

United States Capitol, Senate and House Office Buildings, legislative garage, and laboratory used as field office.
Constructed: 1793 to 1933.
Floor area: 2,735,000 square feet.
Cost: $64 million (to June 30, 1957).

1. Occupancy and use of these buildings and grounds controlled by the Congress.
2. Assignment and reassignment of space in Capitol under Speaker of House of Representatives and Senate Committee on Rules and Administration; in Senate Office Building under Senate Committee on Rules and Administration; in Old and New House Office Buildings under House Office Building Commission; in legislative garage under Vice President and Speaker of the House.
3. Architect of the Capitol has the physical care of these properties.

Capitol Power Plant

Property under the legislative branch of the Government. Supplies heat and air-conditioning refrigeration for the Capitol, Senate, and House Office Buildings; heat for the Library of Congress Buildings, United States Botanic Garden, United States Supreme Court Building, Legislative Garage, Government Printing Office, Washington City Post Office, and Folger Shakespeare Library.

Land:

Acquired by transfer.
Acquired: 1904.
Area: 6 acres.
Cost: Transferred without cost by act of Congress.

Buildings:

Main powerplant building: 244 feet by 117 feet, with maximum height of 85 feet.
Annex powerplant building: 90 feet by 50 feet, 2 stories high.

Buildings—Continued

Refrigeration plant building: 123 feet by 80 feet, height approximately 38 feet.
Walk-through tunnels, containing steam and chilled water distribution lines.
Constructed: 1904 to 1954.
Cost: $15,472,746 (to June 30, 1957).

1. Architect of the Capitol has the physical care and operation of plant.
2. Plant under control of the House Office Building Commission.

Library of Congress buildings

Properties under legislative branch of the Government, occupied by the Library of Congress.

Land:

Acquired by purchase.
Acquired: 1886 to 1932.
Area: 15 acres.
Cost: $1,496,779.

Buildings:

Main and Annex Buildings, Library of Congress.
Constructed: 1889 to 1938.
Floor area: 1,600,000 square feet.
Cost: $20,572,069 (to June 30, 1957).

1. Occupancy and use of buildings and grounds controlled by the Congress.
2. Architect of the Capitol has structural and mechanical care of these properties.
3. All other care, including assignment and reassignment of space, under the Librarian of Congress.

United States Botanic Garden

Properties under legislative branch of the Government, occupied by the United States Botanic Garden, including Poplar Point Nursery.

Lands:

Acquired by purchase, transfer, and public domain.
Acquired: 1851 to 1946.
Area: 33 acres.
Cost: $981,140.

Buildings:

Conservatories, greenhouses, office, storage, and potting sheds.
Constructed: 1873 to 1933.
Floor area: 89,000 square feet.

Cost: $1,074,000 (to June 30, 1957).

1. Architect of the Capitol serves as Acting Director of United States Botanic Garden.
2. Botanic Garden under control of Joint Committee on the Library.

United States Supreme Court Building

Property under the Chief Justice of the United States, occupied by the United States Supreme Court and the Administrative Office of the United States Courts.

98914—57——12

Land:

Acquired by purchase.
Acquired: 1929–30.
Area: 8 acres.
Cost: $1,768,741.

Building:

United States Supreme Court Building.
Constructed: 1931–35.
Floor area: 392,737 square feet.
Cost: $10,538,900 (to June 30, 1957).

1. Occupancy and use of building and grounds controlled by the Congress.
2. Architect of the Capitol has structural and mechanical care of building.
3. All other care under Marshal of the Court, except assignment and reassignment of space which is under the Court.

United States Court of Claims Buildings

Property occupied by and under the control of the United States Court of Claims.

Land:

Acquired by purchase.
Acquired: 1901–2.
Area: One-half acre.
Cost: $100,000.

Buildings:

United States Court of Claims Buildings.
Acquired in 1902.
Floor area: 37,000 square feet.
Cost: $245,000 (to June 30, 1957).

1. Occupancy and use of building and grounds controlled by the Congress.
2. Architect of the Capitol has structural and mechanical care of the buildings.
3. All other care, including assignment and reassignment of space, under the court.

PART VI

INVESTMENTS IN RELATED AREAS (REALTY) OF THE EXECUTIVE AGENCIES, OFFICES, AND ESTABLISHMENTS OF THE UNITED STATES GOVERNMENT, INCLUDING THE DEPARTMENT OF DEFENSE, COVERING INVESTMENTS NOT INCLUDED IN OVERALL REPORT, AS OF JUNE 30, 1957

Worldwide Related Realty Inventory of the Executive Agencies, Offices, and Establishments of the U. S. Government, Including the Department of Defense, Covering Investments in (Related) Areas Not Included in Overall Report, as of June 30, 1957

SUMMARY

[In thousands of dollars]

Executive agencies, offices, and establishments of the U. S. Government:		
Construction in progress		$1,087,918
Leasehold improvements		75,429
Real-estate collateral acquired		174,789
Total		1,338,136
Department of Defense:		
Corps of Engineers, Civil Works Division		300,000
Department of the Army (construction in progress, cost of work in place):		
Continental United States	$671,000	
Territories and possessions	93,000	
Foreign countries	178,000	
		942,000
Department of the Navy (including the Marine Corps) (construction in progress, cost of work in place):		
Continental United States	724,000	
Territories and possessions	220,000	
Foreign countries	90,000	
		1,034,000
Department of the Air Force (construction in progress, cost of work in place):		
Continental United States	1,027,000	
Territories and possessions	89,000	
Foreign countries	698,000	
		1,814,000
Total		4,090,000

RECAPITULATION

Total, civilian agencies	$1,338,136
Total, Department of Defense, including Corps of Engineers, Civil Functions	4,090,000
Grand total	5,428,136

[1] Buildings, structures, and facilities computed at acquisition (known or estimated) cost, and these figures are included in the realty section of this report.

DEPARTMENT OF AGRICULTURE,
Washington, D. C., October 25, 1957.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives.

DEAR CONGRESSMAN DAWSON: Reference is made to your letter of April 10, 1957, and to our subsequent correspondence of May 2, and May 6 in connection with estimates of the value of public domain realty administered by this Department as of June 30, 1957. Such estimates are shown in the accompanying table. We have attempted to determine the commercial values of public domain lands and timber for private ownership in terms of fair market value assuming the marketability of all lands. As was the case last year, no allowance has been made for public values for such important uses as water production.

As the committee will appreciate, the estimates are necessarily approximations. The value of holdings such as the national forests are particularly difficult to estimate due to the extent of such lands, the public nature of their use, and the lack of fully comparable areas in private ownership. During the past year we have reviewed such information as is available relating to sales prices for private tracts. In many cases, however, the absence of such data or their limited applicability have made it necessary to rely very largely on judgment estimates.

The accompanying estimates do not include the values of buildings, structures, and other facilities. As mentioned in our letter of May 2 many thousands of buildings are located on intermingled acquired and withdrawn lands administered by this Department and our records are not compiled in such a way that we can readily determine which buildings are located on public domain lands and which are on acquired lands. In accordance with discussions with members of the committee staff, the cost of buildings, structures and other facilities has been reported separately to the General Services Administration. The value of such improvements is reflected in part in land and timber values and hence should not be added to the realty values in the attached table. As before, the value of mineral resources subject to disposal under the mining or mineral leasing laws are being reported to the committee by the Department of the Interior.

Sincerely yours,

E. L. PETERSON, *Assistant Secretary.*

Acreage and estimated market value, public domain realty, 1957, U. S. Department of Agriculture [1]

Region [2]	Area	Value [3]
	Acres	*Millions dollars*
Pacific coast	43, 516, 977	5, 315
Northern Rocky Mountain	45, 323, 022	[4] 599
Southern Rocky Mountain and Plains	48, 075, 491	460
Northern Central	1, 392, 161	17
South	1, 214, 864	98
Alaska and Puerto Rico	20, 752, 969	72
Total	160, 275, 484	6, 561

[1] Includes national forests, Bankhead-Jones title III lands, and research and demonstration areas.

[2] Pacific coast: California, Oregon, Washington. Northern Rocky Mountain: Idaho, Montana, Wyoming. Southern Rocky Mountain and Plains: Nevada, Utah, Colorado, Arizona, New Mexico, North Dakota, South Dakota, Nebraska, Oklahoma. North Central: Minnesota, Wisconsin, Michigan, Missouri, Illinois. South: Arkansas, Louisiana, Mississippi, Alabama, Florida.

[3] Estimates of fair market value of land and timber for private ownership, assuming the marketability of all lands. Public and nonmonetary values not included. Acquired lands which are of relatively large importance in the East, also not included.

[4] Does not include value of certain areas of public domain lands in Wyoming in Eden Valleyi rrigation project administered under the law as acquired lands.

DEPARTMENT OF COMMERCE,
CIVIL AERONAUTICS ADMINISTRATION,
Washington.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: In accordance with your letter of April 10, 1957, addressed to the Administrator, we are pleased to submit, in duplicate, two reports listing the public domain under the custody and control of this Administration, the estimated present day value of such land, and for the fixed improvements located thereon. One of the reports is for property in the United States and the other is for Alaska.

Sincerely yours,

LEWIS N. BAYNE,
General Services Officer.

Total		884.14		
Grand total		12,493.98	41,732	[3] 1,563,000

[1] Facilities which it is contemplated will be discontinued within the next fiscal year.
[2] Total value of improvements. This includes runways, aprons, etc. Estimated value of the building is $2,000.
[3] The present value of fixed improvements on public domain in the United States, as of June 30, 1957, is considerably greater than was reported as of June 30, 1956. This is due primarily to the fact that original estimates have been reviewed and made more realistic in the course of installing a property accounting system.

Estimated value of public domain and improvements thereon under jurisdiction of Civil Aeronautics Administration in Alaska, as of June 30, 1957

Name of property	Location	Usage	Number of acres	Value of public domain	Value of improvements	Total value

[1] Estimated 96 percent of total improvements on public domain.
[2] Most improvements are not on the 2,229 acres already withdrawn, but on an additional 1,763 acres requested of the Bureau of Land Management.
[3] Estimated 99 percent of total improvements on public domain.
[4] Estimated 78 percent of the airstrip and $56,000 worth of other improvements are on public domain.
[5] C. T. Station and certain roads on public domain portion of the land occupied.

U. S. DEPARTMENT OF COMMERCE,
COAST AND GEODETIC SURVEY,
Washington.

Hon. WILLIAM L. DAWSON,
Chairman, Executive and Legislative Subcommittee of the Committee on Government Operations,
House of Representatives, Washington, D. C.

DEAR MR. DAWSON: In response to your letter dated April 10, 1957, attached is the information on public domain land held by this Bureau.

If additional information is required, we will be glad to comply with your request.

Sincerely yours,

CHARLES PIERCE,
Rear Admiral, Coast and Geodetic Survey,
Acting Director.

U. S. DEPARTMENT OF COMMERCE

COAST AND GEODETIC SURVEY

Tucson Magnetic Observatory

1. Number of acres and location:
   a. Acres: 173.
   b. Location: Tucson, Pima County, Ariz.
2. Description of property:
   a. Land: Desert land located 10 miles east of Tucson.
   b. Buildings, all permanent:

Type	*Number*	*Floor space (square feet)*
Office	1	1,200
Houses	2	2,766
Storage	3	778
Observatories	9	2,747
Total	15	7,491

   c. Facilities, all permanent:
      Fencing, 4,400 feet.
      Gasoline storage tank, 280 gallons.
      Well, 200-foot, with 5,000-gallon storage tank.
      Electrical distribution system.
      Sewage system.
3. Use of land and buildings:
   Primary magnetic observatory and seismograph station.
4. Evaluation of land and buildings:

a. Land	$310,000
b. Buildings	53,000
c. Facilities	7,000
Total	370,000

Sitka Magnetic Observatory

1. Number of acres and location:
   a. Acres: 118.74
   b. Location: Sitka, Baranoff Island, Alaska
2. Description of property:
   a. Land: Wooded land on northern outskirts of Siska
   b. Buildings, all permanent:

Type	*Number*	*Floor space (square feet)*
Houses	2	4, 551
Storage	1	323
Service	1	252
Observatory	3	2, 167
Total	7	7, 293

   c. Facilities, all permanent:
      Electrical distribution system
      Roads and bridges
      Sewage system
      Water system
3. Use of land and buildings:
   A primary magnetic observatory and seismological station
4. Evaluation of lands and buildings:

a. Land	$35, 500
b. Buildings	51, 000
c. Facilities	4, 000
Total	90, 610

DEPARTMENT OF COMMERCE,
BUREAU OF PUBLIC ROADS,
Washington, D. C., October 31, 1957.

Hon. WILLIAM L. DAWSON,
House of Representatives,
Washington, D. C.

DEAR MR. DAWSON: The enclosed tabulation of public domain properties under the control of the Bureau of Public Roads as of June 30, 1957, is furnished pursuant to a recent conversation between Mr. Earle J. Wade of your staff and Mr. William F. Crawford of the Department of Commerce.

Except for the Seward Equipment Depot all reported installations were part of the real property holdings of the Alaska Road Commission when that organization was transferred from the Office of Territories, Department of Interior to the Bureau of Public Roads on September 16, 1956. Since there was not sufficient time to contact our Alaska offices, this office has assigned land values, exclusive of minerals, based on the reported values of the nearest holdings of the Civil Aeronautics Administration. The values assigned to the fixed improvements are the construction costs furnished the General Services Administration in the Annual Report of Real Property Owned by the United States Government.

If I can be of further service, please do not hesitate to call on me.

Sincerely yours,

C. D. CURTISS,
Commissioner of Public Roads.

Estimated value of public-domain properties under control of Bureau of Public Roads as of June 30, 1957

Name	Location	Usage	Acreage	Present value of land	Value of fixed improvements	Total

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., November 20, 1957.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House Office Building, Washington, D. C.

DEAR MR. DAWSON: By letter of April 10, 1957 you requested this Department to furnish the House Committee on Government Operations certain data pertaining to the value of public-domain lands, with the improvements thereon, in the same manner as those data were furnished in the prior year. You also requested that we again assume responsibility for reporting estimated values of all public-domain mineral resources in the continental United States and Alaska.

Pursuant to this request there are enclosed:

(1) Tabulation by States showing the estimated market value of public-domain lands administered by the United States Department of the Interior as of June 30, 1957, including average value per acre and value of improvements.

(2) Cost of structures and facilities (in thousands of dollars), June 30, 1957, by functions served.

(3) Cost of buildings (in thousands of dollars), June 30, 1957, by functions served.

(4) Tabulation by States, Alaska and the Outer Continental Shelf, showing mineral resource values (in thousands of dollars) of the public domain.

The present estimates, like those furnished last year are, at best, a rough approximation of values, subject to serious limitations on their usefulness. The difficulty, as we have pointed out previously, is that the public-domain lands cannot, for the most part, be sold and basic data for their evaluation are generally lacking. Also, since, pursuant to the committee's instructions, the values assigned are based on real estate rather than on recreational or other value, the estimates fail to give proper weight to the scenic and recreational sites of the national parks and monuments.

Your attention is drawn to the footnotes to the table of mineral resource values. It is again recommended that the figures be used only in accord with the indicated limitations.

Sincerely yours,

D. Otis Beasley,
Administrative Assistant Secretary of the Interior.

Estimated market value of public-domain lands administered by U. S. Department of the Interior, June 30, 1957

Department of the Interior

Mineral resource [1] value of the public domain [2]

[In thousands of dollars]

State	Value [3]	Principal sources
Alabama	200	Coal, oil and gas.
Arizona	2,200	Oil and gas.
Arkansas	400	Do.
California	229,000	Oil and gas, sodium, potash, coal.
Colorado	210,000	Oil and gas, coal, sodium.
Florida	20	Oil and gas.
Idaho	13,000	Phosphate, oil and gas, coal.
Kansas	2,500	Oil and gas.
Louisiana	5,400	Do.
Michigan	100	Do.
Minnesota [4]	2,900	Copper and nickel.
Mississippi	100	Oil and gas.
Montana	61,000	Oil and gas, phosphate, coal.
Nebraska	300	Oil and gas.
Nevada	28,000	Do.
New Mexico	296,000	Oil and gas, potash, coal, sodium.
North Dakota	6,100	Oil and gas, coal.
Oklahoma	11,000	Coal, oil and gas.
Oregon	3,100	Oil and gas, coal.
South Dakota	4,900	Do.
Utah	102,000	Oil and gas, coal, potash, phosphate.
Washington	300	Oil and gas, coal.
Wyoming	538.000	Oil and gas, sodium, coal, phosphate.
Continental United States	1,516,520	
Alaska [5]	42,000	Oil and gas, coal.
Outer Continental Shelf [6]	3,200,000	Oil and gas, sulfur.
Total	4,758,520	

[1] For the present purpose of establishing a "real estate" value of the public domain, mineral resource values are the capitalized value of income accruing to the Federal Treasury. This income is almost entirely derived from minerals subject to mineral leasing acts. Only negligible income is derived from minerals subject to location under the mining laws because they pass from Federal ownership upon discovery; before discovery, they have only speculative assignable value best reflected in the surface values. Building stone, sand and gravel, and similar materials subject to disposal under the materials act are also reflected in surface values.

[2] Includes lands transferred from the public domain; excludes acquired lands.

[3] Predicated on present receipts from mineral leases, licenses, permits and from filing and patent fees, taking into account probable future production and demand factors; capitalized as an annuity for 50 years at 4 percent compound interest and discounted to present value. Estimate of October 1957.

[4] Minnesota copper and nickel royalty estimates are capitalized as the present value, at 4 percent compound interest, of a 25-year annuity deferred 25 years.

[5] Alaska oil and gas royalty estimates are capitalized as the present value, at 4 percent compound interest, of a 10-year annuity deferred 40 years.

[6] The Outer Continental Shelf estimate is very preliminary, subject to change with production experience, with litigation, and with technologic developments.

THE SECRETARY OF HEALTH, EDUCATION, AND WELFARE,
Washington, October 25, 1957.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D. C.

DEAR MR. DAWSON: There is attached the data requested in your letter of April 10, 1957, concerning public-domain properties under the control of this Department for inclusion in the Federal Property Inventory Report to be published by your committee.

Should you need further assistance, we will be happy to serve you.

Sincerely yours,

JOHN W. PERKINS,
Acting Secretary.

GSA FORM 1166 JULY 1957

UNITED STATES DEPARTMENT OF JUSTICE,
BUREAU OF PRISONS,
Washington, September 3, 1957.

Re: Real property inventory, Federal Prison Service

Hon. WILLIAM A. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D. C.

DEAR MR. DAWSON: In your memorandum of April 10, 1957, you requested certain information regarding the three parcels of public domain lands under the jurisdiction of the Bureau of Prisons. The following data are submitted in accordance with our inventory of June 30, 1957.

United States Penitentiary, Alcatraz, Calif.—There has been no change since our last report. The acreage is still 12.7 and the land value $177,800 based on 1934 records at time of transfer to us from the Army. The buildings are presently valued at $1,766,000 with other structures and facilities included at $383,200, making a total book value of $2,327,000, which is the same as last year.

Federal Reformatory, El Reno, Okla.—The 1,000 acres of public domain land at this institution were temporarily evaluated last year at $107 per acre, or $107,000 for the entire parcel. Agriculture subsequently informed us that they had evaluated their adjoining land at $100 per acre for cropland and $50 per acre for grassland. Accordingly our total land value has been adjusted to $66,000. There were no buildings on the land when acquired. Buildings are presently valued at $1,933,000 and other structures and facilities at $286,000, making a total of $2,285,000.

United States Penitentiary, Leavenworth, Kans.—There is no change from the previous report regarding the value of public domain land at this institution. It was appraised last year at $150 per acre, or $190,000 for the 1,265 acres. No buildings were on this land when acquired. Present book value of the buildings is $5,062,000 and $468,000 for the other structures and facilities, making a total of $5,720,000.

The above values for public domain land were not included in the 1957 General Services Administration report. Increases in El Reno and Leavenworth totals were due to completion of major alteration projects.

We trust the above information will assist your committee. Please advise if additional information is required.

Sincerely,

J. V. BENNETT, *Director.*

Bureau of Prisons, public domain properties

Location	Acreage	Value of acreage	Value of buildings and facilities	Total
U. S. Penitentiary, Alcatraz, Calif.	12.7	$177,800	$2,149,200	$2,327,000
Federal Reformatory, El Reno, Okla.	1,000.0	66,000	2,219,000	2,285,000
U. S. Penitentiary, Leavenworth, Kans.	1,265.0	190,000	5,530,000	5,720,000
Total	2,277.7	433,800	9,898,200	10,332,000

POST OFFICE DEPARTMENT,
ASSISTANT POSTMASTER GENERAL,
BUREAU OF FACILITIES,
Washington, D. C., September 26, 1957.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: Referring to your letter dated April 10, 1957, addressed to the Postmaster General, I am pleased to submit the following information relative to public domain properties in Alaska, under the control of the Post Office Department as of June 30, 1957:

Location and description	Number of acres	Value		
		Land	Building	Total
Anchorage, land and building	2.0	$435,677	$2,415,000	$2,850,677
Ketchikan, land and building	1.7	189,875	1,206,000	1,395,875
Sitka, land and building	.7	23,067	512,000	535,067
Wrangell, land and building	2.5	150,000	393,000	543,000
Total	6.9	798,619	4,526,000	5,324,619

The above is the estimated present day valuation of the land and buildings.

The usage of all of these properties is to house the post office, courts, and other Federal offices.

If any additional information is desired, I will be very pleased to cooperate.

For the Assistant Postmaster General.
Cordially yours,

ROLLIN D. BARNARD,
Deputy Assistant Postmaster General.

98914—57——15

UNITED STATES COAST GUARD,
Washington, D. C., November 4, 1957.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D. C.

MY DEAR MR. DAWSON: Your letter of April 10, 1957, set forth the need of your committee for certain data on public domain property under the jurisdiction of the Coast Guard.

As promised in my letter of April 25, 1957, the data have been compiled and the report is forwarded herewith as enclosure (1). The report is submitted in the same format as last year. However, it should be noted that usage codes have been revised to agree with usage codes assigned by the General Services Administration.

Sincerely yours,

J. A. HIRSHFIELD,
Rear Admiral, United States Coast Guard,
Acting Commandant.

U. S. TREASURY DEPARTMENT

U. S. COAST GUARD

GENERAL SERVICES ADMINISTRATION,
Washington, D. C., October 29, 1957.

Hon. WILLIAM L. DAWSON,
Chairman, House Committee on Government Operations,
House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: Pursuant to your request, attached is a tabulation of the approximate market values of the public domain properties under the control of GSA as at June 30, 1957.

The only change since our report last year was the disposition of the Fort Stanton property.

Sincerely yours,

FRANKLIN G. FLOETE, *Administrator.*

Estimates of approximate present-day values of public-domain properties for which GSA is responsible

Name and location	Acreage	Estimated approximate present-day value		
		Land	Building	Total
Border station, San Luis, Ariz	36.9	$2,000	$97,000	$99,000
Border station, Lukeville, Ariz	2.0	(1)	13,000	13,000
Border station, Babb, Mont	.7	(1)	60,000	60,000
Total	39.6	2,000	170,000	172,000

[1] Less than $500.

VETERANS' ADMINISTRATION,
Washington, D. C., October 31, 1957.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D. C.

DEAR MR. DAWSON: As requested in your letter of April 10, 1957, there is enclosed a list showing the desired information concerning public domain properties under jurisdiction of the Veterans' Administration.

Sincerely yours,

H. V. HIGLEY, *Administrator.*

Public domain properties under jurisdiction of the Veterans' Administration on June 30, 1957

Station	Description of property	Usage	Number of acres	Estimated present day value	
				Land	Buildings [1]
Boise, Idaho	Land and buildings	VA hospital	102.8	$82,000	$3,394,000
Fort Bayard, N. Mex	do	do	484.3	5,569	2,027,000
Fort Lyon, Colo	do	do	575.2	9,490	5,141,000

Whipple, Ariz	do	do	256.3	385,130	2,004,000
Total			3,367.5	1,655,077	28,976,000

[1] Value of buildings represents VA book value of either actual or estimated cost.

ATOMIC ENERGY COMMISSION,
Washington, D. C.

Subject: Present value of public domain land used by AEC and the present value of AEC improvements on such land.

Reference: Letter to the Chairman, AEC, from chairman, House of Representatives Committee on Government Operations, dated April 10, 1957, relating to the above subject.

Attached is a tabulation, by States, showing: (1) the area, the value as of June 30, 1957, and usage of the public domain land controlled by the AEC in connection with its operations, (2) the number, classification, and the value as of June 30, 1957, of the AEC buildings on such land and, (3) the value as of June 30, 1957, of other structures and facilities constructed on such land by the AEC. The statistical tabulation has been prepared on the basis of information furnished by operations offices using public domain land in accordance with the following instructions:

1. *Public domain.*—For the purpose of the report the term "public domain" was defined as that land within the continental United States and Alaska, title to which was acquired by the United States by treaty, conquest, or cession from the Thirteen Original Colonies and such title is still vested in the United States.

2. *Present value of public domain land.*—The values shown cover the surface land only. Our operations offices were advised also that it was not desired that a formal appraisal be made of such surface land, but that the value should be developed on the basis of what similar lands were selling for as determined by available information or informal inquiry of those who might possess such knowledge.

3. *Present value of buildings.*—That such value could be estimated with sufficient accuracy by taking the total net book cost as of June 30, 1956, for each classification of buildings reported and applying the ratio of Engineering News-Record for June 1957 (building or construction) for the applicable geographical area divided by the corresponding Engineering News-Record index applicable at the time of construction. The value of "Other structures and facilities" were to be determined by the same method. In general, this is a cost of reproduction which takes into account depreciation.

4. *General.*—When "Buildings" and "Other structures and facilities" were located on public domain land and nonpublic domain land, effort has been made to prorate that portion on the public domain land. The value for "Buildings" excludes the cost of equipment which is not capitalized as a part of the cost of the buildings.

In the reports submitted last year was a report of 67,200 acres of public domain land in Los Alamos County, N. Mex., having a value of $1,214,484 with "Buildings" having a value of $91,667.50 and "Other structures and facilities" valued at $39,929,300. This property is not reported this year because Public Law 1006, approved August 6, 1956, transferred these lands to the AEC; this transfer is considered to remove these lands from the category of public domain.

In addition to those activities for which reports are made, the AEC is occupying under permit from the Department of the Air Force, two areas of public domain land in Nevada. One area comprises 348,800 acres and the other 38,400 acres. The value of these lands is $1,109,184 and $122,112, respectively. The buildings and other structures on these lands belong to the Air Force.

California

PUBLIC DOMAIN LAND

County	Acreage	Value	Usage
Imperial	28,790.58	$376,344	Testing weapons.

BUILDINGS

Usage	Number	Gross floor area	Present value
Office	1	286	$10,214.66

FEDERAL REAL AND PERSONAL PROPERTY INVENTORY REPORT (CIVILIAN AND MILITARY) OF THE UNITED STATES GOVERNMENT, COVERING ITS PROPERTIES LOCATED IN CONTINENTAL UNITED STATES, IN THE TERRITORIES, AND OVERSEAS AS OF JUNE 30, 1958

PART I

INTRODUCTION

This compilation of Federal real and personal property assets, in report form, represents a fourth attempt by the House Committee on Government Operations to present, in a comprehensive and understandable manner, an inventory of Federal real and personal assets located in the continental United States, in the Territories and at overseas bases, as of June 30, 1958. The committee has compiled Federal property inventory reports as of June 30, 1955 (12th Intermediate Report, Rept. No. 1930, 84th Cong., 2d sess.), June 30, 1956, and June 30, 1957.

Each year the committee staff, assigned this project, together with Government department and agency representatives, has attempted to delve further into the inventory accounting systems employed throughout the Federal Government, endeavoring to include assets heretofore not included because of incomplete records or due to their not being under accounting inventory control. One needs only to compare the inventory reports to realize that much progress has been made in the improved accounting and recordkeeping of the gigantic amounts of real and personal property owned by the Federal Government. Up-to-date accounting systems have greatly assisted the Government departments and agencies in their endeavor to bring inventories under accounting control. An awareness of this progress, which is being constantly observed, has been stimulated within the departments and agencies due to the interest in and the scrutiny of these inventories by Members of Congress and particularly the membership of this committee.

Again this year, additional refinements are reflected within this Federal property inventory report. Concentrated efforts will continue, in working with Government department and agency representatives, to improve and broaden the scope of property inventory reports. It is the desire of the Committee eventually to present an inventory report which will furnish the members of the House Committee on Government Operations, the Congress, and the public a complete and comprehensive listing of Federal personalty at acquisition cost and all Federal realty at acquisition cost and estimated present-day evaluations. This objective has been partially realized in that public domain and Capitol Hill realty is, and has been previously recorded, at estimated present-day evaluations. Again, in this report, these properties are listed at those values. Progress is

continuing in the right direction of fulfilling the ultimate objective of the committee.

FEDERAL PERSONALTY

Most Federal personalty figures in this report are furnished the committee by the Department of the Treasury. The Department of Defense reports direct to the committee all its inventories, real and personal, for the three military departments and the Corps of Engineers, civil functions. Personalty inventories of the Architect of the Capitol, the Sergeant at Arms of the United States Senate, the Clerk of the House of Representatives, the Librarian of Congress, the Supreme Court of the United States, the United States courts of appeals, United States district courts, and the special United States courts are reported to the committee direct.

Federal personalty (exclusive of cash and related cash items) is reported herein at acquisition cost. This manner of reporting these assets has been discussed with representatives of the General Accounting Office and the Department of the Treasury. It is the consensus that this approach represents a realistic method of recording personalty items, especially in light of replacement costs and in considering amounts received for such items when they are declared surplus and offered for sale. In recording values of items such as paintings, portraits, statues, numerous publications and volumes of books where records are unavailable or the acquisition cost is unknown, an estimated or known value has been used. Numerous personalty assets of the Federal Government are listed on its inventory records at "no value" inasmuch as such items were donated to the Federal Government at no cost and in many instances it is impossible to place a realistic valuation on these properties because of their priceless value. Such is the case of many items located in the Library of Congress, the Smithsonian Institution, the National Archives, and in other storehouses of the Nation. For example, the famous Hope diamond was recently donated to the United States Government. Even though it is valued at figures from something like $200,000 ranging to $2,000,000, it is quite apparent that this asset is worth a considerable sum which will not be reflected in Federal property inventory reports of this committee.

Last year's report indicated that personalty figures were increased as a result of refinements brought about by improved accounting procedures being used within the Government and as a result of some Department of Defense inventories being brought under inventory accounting control. The Treasury Department has been instrumental in furnishing the committee data which reflects refinements in many areas of accounting throughout the Government departments and agencies. Further refinements are noticeable in the inventories of the Department of Defense, listed herein, where much effort and time have been spent in reporting areas of personalty and realty this year which have not been under accounting control.

FEDERAL REALTY (EXCLUDING PUBLIC DOMAIN)

Federal realty is listed herein, for the most part, at acquisition cost with usage categories and number of acres noted. In many cases where realty has been donated or obtained by the Government at no

cost, the land is listed at "no value"—the same as it is recorded on the books of the Federal Government.

In keeping with the desires of the committee, the Architect of the Capitol has again furnished realty figures for inclusion in this Federal property inventory report which reflect estimated present-day evaluations on properties under his control.

Construction work in progress figures, for all Government departments and agencies including the Department of Defense, are recorded in the realty portion of this report. The accounting of these assets as work on projects progresses is a realistic manner of recording billions of dollars worth of Federal assets which have not always been recorded. The usual procedure is to await the completion of a project when the title to a property passes from a contractor to the Federal Government before the value of said project is recorded on the books of the Federal Government. Our present manner of recording construction-in-progress figures reflects the ultimate objective of a comprehensive and complete listing of all Federal assets in all areas rather than limited reporting in selected areas.

It should be pointed out that Federal realty is of great concern to the Committee on Government Operations. There is, at the present time, much acreage listed on the books of the Federal Government at "no value" simply because it was received by the Government at no output of moneys. These properties are valuable and are definitely an asset of the Federal Government and should be listed at some realistic value rather than continue to be listed on the balance sheets of our Nation's Government as of no value. Good bookkeeping practices demand that this situation be corrected.

It should be borne in mind that the acquisition costs recorded for some buildings and facilities are representative of present-day evaluation. This is true when considering the value of buildings and facilities which have been constructed or purchased recently.

FEDERAL REAL ESTATE—FUTURE PRESENT-DAY ESTIMATED EVALUATION

In this report, again this year, Federal realty under the jurisdiction of the Architect of the Capitol, as well as public-domain acreage, is listed at estimated present-day evaluation. Other realty is recorded at acquisition cost and in some instances at "no value." In most instances the acquisition cost figures in no way represent present-day value. In many instances values have increased tremendously and in others the property has decreased in value.

As pointed out previously, assistance has been pledged the Committee on Government Operations and the Government departments and agencies, on a pro bono publico basis, by the American Institute of Real Estate Appraisers, to assist and advise in this undertaking. Efforts are continuing and various avenues are being explored in an endeavor to reach agreement between Government representatives as to a suitable approach to this undertaking. It has been concluded that an honest approach to the evaluation of Federal realty is to use a formula of "estimated replacement cost, less depreciation." From this formula, it is expected that reevaluation criteria will be developed and put into practice. The committee feels that a continuation of the present practice of evaluation by governmental authorities who are aware that such present practices result in misleading and antiquated

evaluations demands a more convincing defense than has been made of them.

It is the intent of the committee that during the next few months renewed efforts will be made in the direction of seeking standards of improved evaluation procedures and practices. The committee feels that an inventory report such as this should reflect realistic figures on Federal real estate, based on approved evaluation procedures and practices, rather than including figures which, in many instances, are antiquated and present a misleading picture of the Government's investment.

PUBLIC DOMAIN PROPERTIES

Public domain acreage is listed again in this report at estimated present-day evaluations. In some instances, Federal departments and agencies have been able to place an estimated present-day evaluation on buildings, structures, and facilities located on public-domain lands. These estimates are included for information purposes only in the public domain summary table. To avoid duplication and for the sake of clarity, all buildings, structures, and facilities are recorded in the realty section of the inventory report at acquisition cost. As and when "yardstick" evaluation criteria have been established and it is possible to list all improvements on Federal real estate at an estimated present-day evaluation, it will then be possible to have all realty tables reflect current up-to-date figures. The method used in this report has been utilized so as not to confuse the reader of the report and not to have an overlapping of figures and properties. In many cases, because of the nature of the property and the installation itself, it has not been possible to determine, because of intermingling, whether some structures are located on public domain property or regular Federal property.

The estimated present-day evaluations have been determined by qualified field representatives employed in the real property field offices of the departments. As a result of this skill and assistance, evaluations have been determined without having to engage the services of private professional appraisers. The Department of the Interior is responsible for determining overall values of mineral, oil, and ore deposits for all Government departments and agencies, and the Department of Agriculture is responsible for furnishing the committee with estimated overall values of timberlands, grazing lands, grazing rights, etc. All public-domain data are furnished the committee direct and are not furnished through the General Services Administration.

In its Federal Property Inventory Report, as of June 30, 1956, the Committee on Government Operations listed therein public domain lands at a realistic estimated present-day evaluation. Theretofore those lands had been listed at "no value." An attempt was made in 1937 to evaluate public domain acreage by representatives of the Federal Government. After considerable time, effort, and funds had been expended, the resultant declared value of these lands was placed at $1.25 an acre. Such an unrealistic overall figure in no way reflects the true value of these lands either in 1937 or today. One of the objectives of this committee inventory undertaking has been to face this situation realistically and to investigate these property areas and encourage improved accounting of known Federal assets.

Public-domain lands have been appraised by the individual departments and agencies and an estimated present-day value placed on them, based on evaluation criteria employed in evaluating Federal or privately owned adjoining properties.

It has been possible for all departments and agencies to complete the job of placing an estimated present-day evaluation on public-domain acreage under their control.

For the sake of clarity, acquisition cost figures have been used in this report covering Federal realty, including the buildings, structures, and facilities located thereon. Public-domain acreage is listed at estimated present-day evaluations. Also included in the realty portion of this report are figures covering areas of construction in progress, leasehold improvements, and real-estate collateral acquired.

ACKNOWLEDGMENTS

Acknowledgment is made to the Government department and agency representatives who have been of such great assistance to the committee in the preparation of this report. They have been particularly helpful to the committee in furnishing needed data either direct or on a representative-for-agency basis.

Without the able assistance of qualified and interested Government representatives, the compilation of accurate and comprehensive data in the realty and personalty fields, as represented herein, would not have been possible.

CONCLUSION

Interest in Federal property inventory reports, as compiled by the House Committee on Government Operations, continues to increase. Inquiries are constantly being received from the congressional offices from schools and universities located throughout the United States, from the military establishments throughout this country and from abroad, as well as from private organizations, clubs, and individuals for copies of each report. Together with the interest in this project, evidenced by the numerous requests for the report, many commendations have been received on the project itself and the work the committee is doing in bringing about, and constantly improving, this long overdue public undertaking.

The committee feels that each Federal property inventory report it releases is a step forward in realizing the objectives set forth in the original intent of House Resolution 26, introduced in the House of Representatives on January 5, 1955, by Congressman Martin Dies, which was referred to the House Committee on Government Operations. The initial report, as of June 30, 1955, was a starting point and represented efforts to record, in inventory form, assets of the Federal Government in one document. Up until the time our first report was prepared, there was no central place where one could find data covering all Federal real and personal assets which were located in continental United States, the Territories, and at overseas bases. Many improvements and refinements were reflected in the committee's reports as of June 30, 1956, and June 30, 1957. A primary objective in improving these Federal property inventory reports has been the recording of real and personal assets of the Federal Government in a realistic sense—at estimated present-day evaluations. The undertaking of evaluating public domain properties has been a tremendous one and the Depart-

ments and agencies who have been working with the committee staff in completing this assignment are to be congratulated on the job they have done.

Federal personalty will continue to be reported at acquisition cost. This is on the advice of the General Accounting Office representatives and other accounting specialists within the Government.

Federal real estate, excluding public domain properties, is again listed herein at known acquisition cost. This particular area of the Federal property inventory report concerns the chairman and members of the House Committee on Government Operations. It is expected that in the near future evaluation criteria will be formulated and put into practice which will enable the committee to compile and present to the Members of Congress and to the public an inventory report which will be far more realistic, practical, and useful than one which reflects acquisition cost figures in this area.

The scope of an inventory of the properties owned by the Federal Government is tremendous and complex. These inventories are located in areas throughout the world and the recording and reporting of these assets is a massive undertaking. Improved bookkeeping methods and accounting controls which are being stressed constantly are proving to be a helpful asset, both within the civilian and military departments and agencies of the Government. Government property representatives assisting in this endeavor are deeply interested in improving records which represent the Government's investment in the real and personal property fields. It has been established that the need is great for an up-to-date Federal property inventory project such as the committee has undertaken. This project will continue to reflect various economic changes in values as well as improved inventory reporting practices. The results, represented in informative report form, will be of constant utility.

In compiling and reporting data of a classified nature for inclusion in this report, the committee has kept in mind the importance and necessity of security regulations. Efforts have been made to record classified data in a manner which will insure secrecy and at the same time remain informative and accurate. Breakdown figures have been used in each instance possible and only in restricted areas have lump-sum figures been recorded. Substantiating data covering classified areas are available within the departments for those qualified to see and study on a need-for-use basis.

Since 1950 there has been a remarkable increase in interest and activity among county, city, and State officials regarding property values.

In March of this year an inquiry was directed to the Honorable Frank Bane, executive director, the Council of State Governments, Chicago, Ill., informing him of the committee's inventory project and requesting his assistance in furnishing the committee with data concerning individual State property inventories and methods used in compiling them. A proposed questionnaire was furnished Mr. Bane, for his approval, to be sent to various State property officials to use in recording the requested data.

Questionnaires were sent to officials responsible for overall financial control in 18 States (Alabama, California, Connecticut, Illinois, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, New Mexico, North Carolina, Ohio, Oregon,

Rhode Island, and West Virginia). Replies were received from 16 States. It was learned that 11 of the 16 States do have real property inventories. Ten of these States have property values recorded at acquisition cost; 1 State records at "sound value"; 2 States have values recorded at acquisition cost and current appraised value. The time element involved in computing and compiling inventories varies. Some States compile annual inventories while others compile them biennially, and at various intervals. The State of California follows the 5-year compilation period. Some States are in the process of setting up inventories for the first time. In the main, property evaluation is done by personnel of the various State agencies concerned. In a few States, values are set by commercial appraisers. The State administration in North Carolina is presently working on a compilation of its real property assets and it is expected that evaluation assistance will be obtained from the North Carolina State Bar Association on a pro bono publico basis.

It was learned that the number of personnel utilized in the compilation of property inventories varies from a few departmental employees in some States to a total of 50 full-time employees in others. The time element and costs involved in the preparation of inventories vary greatly. Although there is great difference in the methods and manner of recording property and its value in States at the present time, there are strong indications that a uniform pattern will be established in the not too distant future because of the aroused interest in property inventories which has been evidenced and as State officials exchange ideas and publications on this subject.

The Federal property inventory report, issued by the Committee on Government Operations, is being used as a handbook in many States at the present time and more and more attention is being focused on this publication not only in the Washington area but throughout the United States. These inventory reports have recently been mentioned in an outstanding book on State property entitled, "California Lands—Ownership, Use, and Management," prepared under the auspices of the American Forestry Association. Attention has been called to the report in The Economic Analysis and Evaluation of the Land Resources of the State of New Mexico, prepared for the New Mexico Land Resources Association.

This Federal property inventory report records, as of June 30, 1958, Federal real and personal assets as being over $262 billion. It is interesting to observe, in this connection, that the size of the national debt, as of June 30, 1958, was reported as being over $276 billion. These are sizable amounts, and it is understandable that recordkeeping operations involved in inventories of this size are tremendous.

Efforts to improve this property inventory undertaking will continue. Eventually the committee expects to be able to present an inventory which will reflect not only acquisition cost of Federal real estate, but at the same time its estimated present-day evaluation. At that time it will be felt that the objective of the undertaking will have been accomplished. It is a known factor that this project is one of the most worthwhile and valuable performed by the House Committee on Government Operations.

With continued interest in and cooperation by Government department and agency representatives, working with the committee staff, the ultimate objective can be accomplished.

PART II

MASTER RECAPITULATION OF FEDERAL PERSONALTY AND REALTY OF THE UNITED STATES GOVERNMENT AS OF

JUNE 30, 1958

JUNE 30, 1957

JUNE 30, 1956

GRAND RECAPITULATION OF THE PERSONALTY AND REALTY ASSETS OF THE U. S. GOVERNMENT (EXECUTIVE AGENCIES, OFFICES, AND ESTABLISHMENTS OF THE GOVERNMENT, INCLUDING THE DEPARTMENT OF DEFENSE) AS OF JUNE 30, 1958, JUNE 30, 1957, AND JUNE 30, 1956

[In millions of dollars]

Classification	June 30, 1958	June 30, 1957	June 30, 1956
PERSONAL PROPERTY			
Cash:			
With Treasurer of the United States	$9,749	$5,590	$6,546
On hand and in banks outside the Treasury	951	807	857
Investments (other than public debt)	3,932	3,942	3,812
Accounts and notes receivable	5,866	6,555	6,574
Commodities for sale	5,573	5,505	6,136
Work in process	2,371	1,594	1,456
Materials and supplies	8,318	7,531	6,794
Loans receivable	18,484	17,680	18,796
Machinery and equipment	10,793	10,558	10,551
Other assets	9,371	9,731	6,539
Department of Defense—equipment, supplies, stock inventories, etc	119,752	117,339	111,164
Corps of Engineers, equipment, etc	188	184	185
Total personal property	195,348	187.018	179,410
REAL PROPERTY			
Executive departments and agencies (other than Department of Defense)	14,855	14,467	14,134
Department of Defense, including Corps of Engineers, civil functions	30,802	28,567	26,318
Architect of the Capitol [1]	345	335	317
Other, including construction in progress, etc	6,284	5,428	1,163
Public domain acreage, including mineral resources [1]	14,422	14,215	14,160
Total real property	66,708	63,012	56,092
Total all property	262,056	250,030	235,502

[1] Computed at estimated present-day evaluation.

NOTE.—All properties reported are shown in gross amounts without deductions for allowances for losses and depreciation. Only wholly owned Government corporations and wholly owned assets are included. Assets held under trust arrangements and interagency assets, including public debt securities owned, are excluded. The properties have been valued at acquisition cost or estimated cost when the actual costs were not known. Public domain is shown at estimated current values. Properties acquired as gifts or without cost to the Government are recorded by the agencies at no value and therefore not reported. It is the firm belief of the committee that estimated present day evaluations on Federal realty should be used in Federal property inventory reports, rather than to have such realty listed at acquisition cost or of "no value."

33294—58——2

PART III

PERSONALTY INVENTORY OF EXECUTIVE, LEGISLATIVE, AND JUDICIARY OFFICES, AGENCIES, AND ESTABLISHMENTS OF THE UNITED STATES GOVERNMENT, AS OF JUNE 30, 1958

REAL AND PERSONAL PROPERTY OF THE DEPARTMENT OF DEFENSE AS OF JUNE 30, 1958

Worldwide Government Personalty Recapitulation as of June 30, 1958

[In thousands of dollars]

Agency or department:	
Executive, legislative, and judiciary offices, agencies, and establishments of the U. S. Government, including financial assets of the Department of Defense and Corps of Engineers, civil functions	$75,407,568
The Department of Defense (personalty)	119,752,000
Corps of Engineers, civil functions (personalty)	188,000
Grand total	195,347,568

Note.—The June 30, 1957, property inventory report listed a grand total of personalty amounting to $187,017,524,000. Figures in this property inventory report represent an increase, as of June 30, 1958, in personal assets amounting to $8,330,044,000.

Treasury Department

Washington, D. C.

Summary statement

Hon. William L. Dawson, chairman of the Committee on Government Operations, House of Representatives, in a letter to the Secretary of theTreasury dated February 13, 1958, again requested the cooperation of the Treasury Department in securing data on personal property as of June 30, 1958, from Government departments and agencies in the manner similar to that employed for the previous year; in addition, information was also requested covering Federal investments in related areas covering real estate. As in the past, the Department of Defense is reporting a greater part of its personal property direct to the committee and these data are incorporated in another section of this report. However, certain personal property of the Department of Defense consisting of (1) cash of disbursing officers; (2) receivables; (3) advances to contractors; and (4) certain progress payments are included in this section of the report by mutual agreement with the Defense Department.

The Treasury Department on the basis of asset statements received from Government agencies prepared "The Statement of Personal Property of the United States as of June 30, 1958." In all there were 149 agencies reporting who furnished 251 asset statements. These statements were prepared in accordance with the requirements of Supplement No. 1 to Circular No. 966, dated June 1, 1956. This supplement requested all executive agencies to furnish a statement of assets as of June 30 of each fiscal year. A copy of this circular and the instructions covering the preparation of the asset statement are included as part of the Treasury report to the committee. It also includes the statement of related real property of certain agencies other than the Department of Defense as of June 30, 1958.

All agencies furnishing information to the Treasury Department did so with the greatest cooperation and assistance and in a very timely manner. The following statement shows a comparative analysis of the personal property of the United States Government, excluding the greater part of the Department of Defense, which is included elsewhere in this report for the period ended June 30, 1958, and June 30, 1957.

Comparative figures on personal property of the U. S. Government (excluding the greater part of the Department of Defense shown elsewhere in this report) as of June 30, 1958 and 1957

[In thousands of dollars]

Classification	June 30, 1958	June 30, 1957	Increase, 1958 over 1957	Decrease, 1958 over 1957
Cash on hand, in banks, etc	$10,700,345	$6,397,399	$4,302,946	
Investments in securities (excluding public debt securities)	3,932,239	3,942,357		$10,118
Accounts and notes receivable	5,865,418	6,555,311		689,893
Commodities for sale	5,573,230	5,505,147	68,083	
Work in process	2,370,757	1,593,839	776,918	
Materials and supplies	8,318,254	7,530,651	787,603	
Loans receivable	18,483,964	17,679,989	803,975	
Machinery and equipment	10,792,424	10,558,292	234,132	
Other assets	9,370,937	9,731,339		360,402
Total	75,407,568	69,494,324	6,973,657	1,060,413
Net increase 1958 over 1957			$5,913,244	

NOTE.—All assets herein reported are shown in gross amounts with no deductions for allowances for losses and depreciation. Only wholly Government-owned corporation assets and other wholly-owned assets are included. Assets held under trust arrangements and interagency assets, including public debt securities owned, are excluded. The assets are in the main valued at acquisition cost (known or estimated).

An analysis of the increases and decreases of personal property in the above statement shows there has been an overall net increase amounting to $5.913 billion held by all agencies of the Government, excluding that of the Department of Defense which is shown in another section of this report. The major increases in assets are due to an increase in (1) the cash of the Treasurer of the United States of $4.16 billion as a result of collection of June 1958 quarterly income taxes which were utilized to meet expenditures during July 1958. Treasurer's cash decreased $4.63 billion in July 1958, and (2) an increase in loans of $804 million resulting principally from an increase in foreign loans. The major decrease is represented by liquidation of accounts and notes receivable of $690 million.

Included in the above statement is an item of loans outstanding amounting to over $18 billion. These loans have been made for various purposes. A comparative analysis of such loans, by type of loan, is shown in the following statement.

Comparative figures on gross loans outstanding June 30, 1958 and 1957

[In thousands of dollars]

Type of loan	Amount outstanding June 30, 1958	Amount outstanding June 30, 1957	Increase or decrease (−) 1958 over 1957
To aid agriculture	$4,825,296	$5,053,579	−$228,283
To aid houseowners	3,234,602	3,132,341	+102,261
To aid industry	654,183	632,846	+21,337
To aid States, Territories, etc	270,918	243,657	+27,261
To aid financial institutions	4,225	7,227	−3,002
Foreign loans	8,993,256	8,274,804	+718,452
Other loans	501,484	335,535	+165,949
Total loans receivable [1]	18,483,964	17,679,989	+803,975

[1] Excludes interagency loans.

The above analysis shows the following major changes and the principal reasons for these changes: (*a*) A decrease of $228 million in loans to aid agriculture is due principally to a reduction of such loans by the Commodity Credit Corporation; (*b*) an increase in foreign loans in the amount of $718 million is due to an increase of loans by the Export-Import Bank of over $400 million and an increase of loans by International Cooperation Administration of over $300 million; and (*c*) the increase in other loans is due principally to an increase of the college loans made by the Housing and Home Finance Agency.

As indicated in the report made by the Treasury Department for the year ending June 30, 1957, Public Law 863, 84th Congress (17 Stat. 783), has created an impetus for securing improved accounts and reports of all Federal assets owned by United States Government agencies. There has been an increase in the number of agencies reporting under Treasury Department Circular No. 966 which requires business-type financial statements of all Government corporations, certain unincorporated agencies, and such other agencies as are designated by the Treasury Department. The regulation provides in the main the necessary requirements for securing fairly uniform reports and data necessary to disclose as completely as may be desirable and practical the assets and liabilities of the entire Government.

This report has been prepared in close cooperation with the staff of the Committee on Government Operations, which staff, by their efforts in obtaining reports on all assets of the United States Government, has further contributed to the securing of better records and reports of all Government assets held by the various agencies of the Government. The statements furnished by the agencies show a gradual improvement each year stemming to a large extent from the requirements of Public Law 863 and to their greater awareness of the need for the reporting of the assets of the United States Government on a consistent basis from figures anchored into accounts maintained in accordance with the principles and standards prescribed by the General Accounting Office.

Statement on Personal Property of the U. S. Government as of June 30, 1958

Personal property of the U. S. Government as of June 30, 1958 (excluding the greater part of the Department of Defense shown elsewhere in this report)—Summary statement

[1] Includes materials held for national defense.

[2] Excludes loans guaranteed by the Commodity Credit Corporation amounting to $428,047,269.

[3] Includes certain figures on personal property for the Department of Defense not included under the special section of real and personal property of that Department in this report.

[4] Except with respect to the indebtedness of the Government of Finland ($6,228,087), this does not include the principal of World War I debt accounts ($11,427,523,084) on which payments have not been received since 1933.

[5] Does not include an amount of $28,101,644 representing loans to various States pursuant to the act approved June 23, 1836, on which no payments have been received.

[6] Foreign currencies in the amount of $1,783,029,312, included in this figure, have been evaluated either at the market rate in effect on June 30, 1958, or at the rate at which acquired, depending upon the ultimate utilization of these foreign currencies. These currencies have been generated pursuant to various Government programs, but principally in the sale of surplus agricultural commodities abroad pursuant to title I, Public Law 480, Agricultural Trade Development and Assistance Act of 1954 (68 Stat. 455), as amended.

[7] Excludes guaranteed loans amounting to $52,918,664.

NOTE.—All assets herein reported are shown in gross amounts, with no deductions for allowances for losses and depreciation. Only wholly Government-owned corporation assets and other wholly owned assets are included. Assets held under trust arrangements and interagency assets, including public debt securities owned, are excluded. The assets are, in the main, valued at acquisition cost (known or estimated).

[1] Includes materials held for national defense.

[2] Excludes loans guaranteed by the Commodity Credit Corporation amounting to $428,047,269.

[3] Includes certain figures on personal property for the Department of Defense not included under the special section of real and personal property of that Department in this report.

[4] Foreign currencies have been evaluated either at the market rate in effect on June 30, 1958, or at the rate at which acquired, depending upon the ultimate utilization of these foreign currencies. These currencies have been generated pursuant to various Government programs, but principally in the sale of surplus agricultural commodities abroad pursuant to title I, Public Law 480, Agricultural Trade Development and Assistance Act of 1954 (68 Stat. 455), as amended.

[5] Except with respect to the indebtedness of the Government of Finland ($6,228,087), this does not include the principal of World War I debt accounts ($11,427,523,084) on which payments have not been received since 1933.

[6] Does not include an amount of $28,101,644 representing loans to various States pursuant to the act approved June 23, 1936, on which no payments have been received.

[7] Excludes guaranteed loans amounting to $52,918,664.

*Less than $500.

NOTE.—All assets herein reported are shown in gross amounts, with no deductions for allowances for losses and depreciation. Only wholly Government-owned corporation assets and other wholly owned assets are included. Assets held under trust arrangements and interagency assets, including public debt securities owned, are excluded. The assets are, in the main, valued at acquisition cost (known or estimated).

TREASURY DEPARTMENT

FISCAL SERVICE

Washington

REGULATION RELATING TO THE SUBMISSION OF CERTAIN FINANCIAL STATEMENTS BY GOVERNMENT AGENCIES

1956
Department Circular No. 966
Supplement No. 1

Fiscal Service
Bureau of Accounts

TREASURY DEPARTMENT,
OFFICE OF THE SECRETARY,
Washington, D. C., June 1, 1956.

To Heads of Departments and Agencies and Others Concerned:

The Treasury Department has been requested to furnish the Committee on Government Operations, House of Representatives, with information on properties and assets of the United States Government in connection with the committee's responsibilities for conducting a continuing study of the assets of the Government.

Accordingly, Department Circular No. 966, dated January 30, 1956, is amended as follows:

SCOPE

1. Paragraph 3 is amended by adding the following subparagraph d:

"d. Each executive agency and activity not included in the preceding subparagraphs."

PERIODIC REPORTS REQUIRED

2. The first sentence in paragraph 6 is amended to read as follows:

"Agencies responsible for the administration of corporate or noncorporate activities of the type specified in subparagraphs a, b, and c of paragraph 3 shall furnish all of the following periodic financial statements for each such activity whereas agencies referred to in subparagraph d or paragraph 3 are requested to furnish only the Statement of Financial Condition referred to in subparagraph a of this paragraph."

EFFECTIVE DATE

3. This supplement is effective immediately.

W. RANDOLPH BURGESS,
Acting Secretary of the Treasury.

TREASURY DEPARTMENT

FISCAL SERVICE

Washington

INSTRUCTIONS UNDER SUPPLEMENT NO. 1, TREASURY DEPARTMENT CIRCULAR NO. 966

Relating to the submission of certain financial statements by Government agencies

AUTHORITY FOR INSTRUCTIONS

1. These instructions are issued pursuant to Supplement No. 1, dated June 1, 1956, to Treasury Department Circular No. 966 of January 30, 1956, which requires all executive agencies not heretofore reporting under this regulation to furnish the Treasury Statements of Financial Condition.

AGENCY LIAISON

2. All questions pertaining to the regulations or these instructions should be submitted to the Bureau of Accounts, Treasury Department.

COVERAGE OF REPORTS

3. The reports required shall cover all programs and activities under the control of the agency reporting including those operations conducted in the Territories or overseas. Trust programs or activities will be reported separately and identified as such. Agencies maintaining accounts at the bureau level will submit individual bureau reports without consolidation. Assets and liabilities accounted for at the departmental level and not included in the individual bureau reports should be reported separately so that all assets of the department will be included.

REPORTS REQUIRED

4. Executive agencies now reporting under Department Circular No. 966 will continue to do so in accordance with the provisions of the circular, and instructions issued pursuant thereto, except that an additional copy of the Statement of Financial Condition as of the end of each fiscal year and each schedule supporting such statement shall be submitted to the Treasury Department. All other appropriation and fund account activities not now being reported upon quarterly under Department Circular No. 966 shall be reported upon on a consolidated "Statement of Financial Condition," Standard Form 220, insofar as practicable, in accordance with the requirements of Section II of the instructions issued under Treasury Department Circular No. 966 with the following exceptions:

a. Supplemental schedules 1 through 5 supporting the Statement of Financial Condition will not be required. However, the supplementary statement indicating the basis of figures and special accounting practices required by paragraph 6 of the instructions shall be submitted for all activities and funds reported. Such supplementary statement may be furnished by November 1, if any agency finds that additional time is needed for its preparation.

b. In lieu of reporting "Net Investment" as required by paragraphs 30 through 34 of the instructions, line 68 may be used for reporting the amount of "Unexpended Appropriations" and line 69 may be used for reporting "Invested and Donated Capital" or its equivalent. Such titles shall be typed in.

c. It is recognized that some agencies, having primarily administrative-type activities may not yet have developed their formal accounting procedures to provide balance sheet types of financial statements. For such agencies only the "Asset" side of the Statement is required at this time. However, those agencies not reporting a complete "Statement of Financial Condition" should advise the Treasury as to the probable date that such Statements can be expected.

d. An original and one copy of each report shall be submitted to the Bureau of Accounts, Treasury Department, as of June 30 of each fiscal year as soon thereafter as possible but no later than the following September 30. Two additional copies should be prepared and submitted directly to the Bureau of the Budget.

LAND, STRUCTURES, AND EQUIPMENT

5. That part of paragraph 21 of the instructions relating to the reporting of buildings, structures, and facilities in process of construction is amended to add to the last sentence "and will be reported and so identified on line 36 of Form 220 rather than on lines 30 and 31."

SUPPLY OF FORMS

6. Standard Form 220 (Treasury Department Circular No. 966) will be used by reporting agencies and may be obtained through the supply facilities of the General Services Administration.

BASIS OF REPORTS

7. The monetary values reported shall be in accordance with the requirements of Department Circular No. 966 in all cases where accounts are maintained. Where accounts are not maintained such values may be determined from other records or on the basis of estimates according to the best information obtainable. When estimates are used in any line item "Est." shall be typed after the line title.

AGREEMENT WITH OTHER REPORTS

8. In all cases where similar information is being reported as of the same date to committees of Congress, other Government offices or agencies such as the Bureau of the Budget, the General Services Administration, or published in reports of the agency, care must be exercised by the reporting agency to insure agreement of the data submitted. As a specific example, the values reported for (1) land, (2) buildings, and (3) structures and facilities shall be determined in accordance with General Services Administration Circular No. 80, as supplemented, and must agree with the total of the reports rendered to that agency on an installation basis. For treatment of the costs of buildings, structures and facilities under construction not reported to the General Services Administration but included in this

report see paragraph 5 of these instructions. Those agencies reporting on public domain to the House Committee on Government Operations, should furnish a copy of each such report to the Treasury.

EFFECTIVE DATE

9. These instructions shall be effective with the reports to be submitted as of June 30, 1956.

W. T. HEFFELFINGER,
Fiscal Assistant Secretary.

TREASURY DEPARTMENT
Washington

REGULATION RELATING TO THE SUBMISSION OF BUSINESS-TYPE FINANCIAL STATEMENTS BY GOVERNMENT CORPORATIONS AND CERTAIN UNINCORPORATED AGENCIES

1956
Department Circular No. 966

Fiscal Service
Bureau of Accounts

TREASURY DEPARTMENT,
OFFICE OF THE SECRETARY,
Washington, D. C., January 30, 1956.

To Heads of Departments and Agencies and Others Concerned:

PURPOSE OF REGULATION

1. The financial statements and related information to be submitted under these regulations are required to furnish financial information for use by the Treasury Department in discharging its responsibility under the Budget and Accounting Procedures Act of 1950 for compilation of overall financial reports of the Government, and for use by the Bureau of the Budget in following through with the budgetary programs of the reporting agencies.

AUTHORITY FOR REGULATION

2. This regulation is issued pursuant to Section 114 of the Budget and Accounting Procedures Act of 1950 (31 U. S. C. 66b) which authorizes the Secretary of the Treasury to require from agencies reports and information for the effective performance of his responsibility for preparing such reports for the information of the President, the Congress, and the public as will present the results of the financial operations of the Government. As authorized by said section, the regulation provides for the furnishing of such financial data as are required by the Director of the Bureau of the Budget.

SCOPE OF REGULATION

3. This regulation requires the submission of financial statements by corporate and noncorporate Government agencies of the following character:

a. All wholly owned and mixed ownership Government corporations specifically included in the Government Corporation Control Act and amendments thereto, or subsequently brought under the provisions of that Act.

b. All other activities of the Government operating as revolving funds (accounts symbolized 4000–4999 and 8400–8499 by the Treasury Department), for which business-type public enterprise or intragovernmental fund budgets are required by the Bureau of the Budget.

c. Other activities or agencies (1) which are of a business-type nature; or (2) whose operations, services, or functions are largely self-liquidating or primarily of a revenue producing nature; or (3) whose operations result in the accumulation of substantial inventories, investments or other recoverable assets. Agencies and other activities to report under this category will be designated by the Fiscal Assistant Secretary of the Treasury.

ISSUANCE OF INSTRUCTIONS

4. Financial statements and related information under this regulation shall be prepared and submitted by the agencies concerned, in the form and the manner prescribed in the procedural instructions issued by the Fiscal Assistant Secretary of the Treasury.

WAIVERS

5. The Fiscal Assistant Secretary of the Treasury is authorized to waive the provisions of this regulation in whole or in part as to any agency or activity when it is determined that full compliance by such agency or activity is not necessary to accomplish the overall objective to obtain information required for the preparation of financial reports or for the purposes of the Bureau of the Budget.

PERIODIC REPORTS REQUIRED

6. Agencies responsible for the administration of corporate or noncorporate activities of the type specified in paragraph 3 shall furnish for each such activity periodic financial statements, as follows:

a. A *Statement of Financial Condition* showing the assets, liabilities, and investments of the United States Government in the enterprise.

b. A *Statement of Income and Expense and Changes in Accumulated Net Income (or Deficit)* showing in condensed form the earnings or losses arising from operations and changes in accumulated net income (or deficit) for the fiscal year to the end of the reporting period.

c. A *Statement of Sources and Application of Funds* showing the manner in which funds have been applied to the acquisition of assets, to expenses, and to retirement of borrowings and capital; the manner in which funds have been provided by the realization

of assets, by income, by borrowings and capital contributions; and from which the net effect of such operations on the budget for the Government as a whole can be determined.

d. A *Statement of Long-range Commitments and Contingencies* containing a short description of the program and a statement showing the gross amount outstanding of loans guaranteed or insured by the reporting agency, insurance programs, obligations issued on credit of or guaranteed by the United States, long-range commitments and other contingent liabilities, and assets held as offsets to such liabilities.

ACCOUNTING SUPPORT FOR REPORTS

7. One of the principles upon which the Treasury Department is proceeding in connection with the responsibility for preparing central financial reports is that such reports should present fairly the financial condition and results of operations of the agencies as shown by their books and records. Hence, agencies shall furnish the Treasury Department with such information regarding the accounting basis for their reports submitted under this regulation, as may be required for proper evaluation of such reports.

EFFECTIVE DATE

8. This regulation, with the concurrence of the Director of the Bureau of the Budget, supersedes Budget-Treasury Regulation No. 3, dated September 1, 1944, and revised March 15, 1947, issued pursuant to Executive Order No. 8512 of August 13, 1940, as amended by Executive Order No. 9084 of March 3, 1942, and shall be effective with the period ending March 31, 1956.

W. RANDOLPH BURGESS,
Acting Secretary of the Treasury.

TREASURY DEPARTMENT
FISCAL SERVICE
Washington

INSTRUCTIONS UNDER TREASURY DEPARTMENT CIRCULAR NO. 966

Relating to the submission of business-type financial statements by Government corporations and certain unincorporated agencies

I. GENERAL

AUTHORITY FOR INSTRUCTIONS

1. These instructions are issued pursuant to Treasury Department Circular No. 966, issued under the authority contained in Section 114 of the Budget and Accounting Procedures Act of 1950 (31 U. S. C. 66b).

SCOPE OF INSTRUCTIONS

2. These instructions explain the kinds of reports and other information to be furnished to the Treasury Department under the regulation; the periods of time to which the reports shall relate; and other reporting specifications, including information concerning accounting support of the data reported.

3. All questions pertaining to the regulations or these instructions should be submitted to the Bureau of Accounts, Treasury Department.

KINDS OF REPORTS AND INFORMATION REQUIRED

4. The financial statements shall be submitted on the following standard forms:

Standard Form 220. Statement of Financial Condition
Standard Form 221. Statement of Income and Expense
Standard Form 222. Statement of Sources and Application of Funds
Standard Form 223. Statement of Long-range Commitments and Contingencies

The printed forms may be purchased through the General Services Administration. Supporting schedules to be submitted as hereinafter required should be prepared or reproduced on letter size (8 by 10½ inches) paper with appropriate title and references. Minus or "red" figures should be indicated by an asterisk (*). A duly authorized officer of the reporting agency will sign the original Standard Form 221. The copies need not be signed but should bear the name of the signing officer.

5. Where there are several regional corporations or institutions in a financial system performing identical functions, such as the twelve banks of the Federal intermediate credit bank system, consolidated statements shall be prepared and submitted for the system. Separate statements for each regional corporation or institution are not required. Where a single fund operated by an unincorporated agency covers activities made up of unlike functions, agencies may be requested to submit separate statements on a program or functional basis.

6. Each item group reported on the Statement of Financial Condition and the Statement of Long-range Commitments and Contingencies submitted for the last quarter in each fiscal year, should be described, in reasonable detail, outlining the accounting principles followed in reporting each item group on these statements unless such descriptive material is included in annual reports of the agencies submitted under paragraph 8 below. The description of the item groups should cover such subjects as (1) nature of accounts, e. g., whether on a cash, accrual, or modified accrual basis; (2) basis of reporting, e. g., whether at cost or some other value; (3) methods used in determining and reporting allowances for losses; (4) extent of departure from the account classifications provided in the regulation; and (5) extent, if any, of departure in reporting from the preceding year. The descriptive matter should be presented in the same order in which the respective item groups appear in the statements.

Reporting periods and distribution of statements

Statement or schedule	Frequency	Original to Treasury	Two copies to Budget Bureau
Forms:			
Standard Form 220	Quarterly	X	X
Standard Form 221	do	X	X
Standard Form 222	do	X	X
Standard Form 223	Semiannually	X	X
Schedules:			
1. Cash and Fund Balances	Quarterly	X	X
1a. Cash in Banks	Annually	X	
2. Investments in Public Debt Securities	Monthly	X	
3. Investments Other Than Public Debt Securities	Quarterly	X	X
4. Loans Receivable—Other Loans	do	X	X
5. Bonds, Debentures, and Notes Payable	do	X	X
Description of Items	Annually	X	X

The statements due quarterly as of the quarters ending September 30, December 31, March 31, and June 30 of each year shall be submitted on or before the 15th of the second month following those dates, except that all statements required at the fiscal year end should be submitted as soon as possible following the close of the fiscal year, but not later than the following September 30. Schedule 2—Investments in Public Debt Securities, provided for in paragraph 14f, shall be submitted each month within twenty days after the month for which it is rendered. The original of each statement and schedule shall be submitted to:

Report Preparation Branch
Division of Central Reports
Bureau of Accounts
Treasury Department

Two copies of each statement indicated above for the Bureau of the Budget shall be submitted directly to that agency at the same time the originals are sent to the Treasury.

8. Any corporation or agency required to report under this regulation, which prepares an annual financial report for publication or general distribution outside the agency, shall furnish one copy thereof to the Division of Central Reports, Bureau of Accounts, Treasury Department and two copies to the Bureau of the Budget at the time the report becomes available for distribution.

ACCOUNTING SUPPORT FOR REPORTS

9. As stated in the regulation, one of the principles upon which the Treasury Department is proceeding in connection with its responsibility for preparing central financial reports is that such reports present fairly the financial condition and results of operations of agencies, as shown by their books and records. The statements for the period ending June 30 should be in agreement with the corresponding statements submitted annually to the Bureau of the Budget for the last completed fiscal year, recognizing that the arrangement and grouping of items in accordance with the prescribed forms of this regulation may not provide a breakdown that is identical in all respects with that required for the corresponding Budget statements.

EFFECTIVE DATE

10. These procedural instructions shall be effective with the reports to be submitted for the quarter ending March 31, 1956.

II. STATEMENT OF FINANCIAL CONDITION

GENERAL

11. The *Statement of Financial Condition* (*Standard Form 220*) will show in condensed form the assets, liabilities, investment of the United States Government, and other capital of each of the reporting corporations and enterprises. The items to be reported under each classification are described below with appropriate reference to the line number on Standard Form 220. For purposes of uniformity, reporting agencies will adhere to the group classifications provided. Certain group classifications contain blank lines for reporting items to be determined and titled by the reporting agency. Supporting detail for certain items shall be furnished in supplemental schedules as indicated. Other supplemental schedules in addition to those specified herein may on occasion be requested from selected reporting agencies.

12. *Interagency Items.*—Interagency receivables and payables representing amounts due to and from other Federal Government agencies on open accounts, notes, or similar indebtedness will be reported on the separate lines provided therefor under the appropriate asset and liability groups on the Statement of Financial Condition. Any reporting agency holding securities or a proprietory interest in the capital of another Government agency will report such holding under investments and include the same as a separate item in Schedule 3 (see paragraph 14f). Bonds, debentures, and notes payable of the reporting agency which are payable to other Government agencies shall be reflected on Schedule 5.

REPORTING OF ASSETS

13. *Cash and Fund Balances.*—Report under this group cash belonging to the reporting agency or held for the account of others, including unexpended balances of funds made available by appropriation. Balances on deposit in banks and in the Treasury should be reflected on a basis of confirmed deposits and checks issued and consistent with the basis for determining unexpended balances of appropriations and funds in the Treasury central accounts. The itemization hereunder will show:

a. *Cash in banks* (*line 1*).—Report on this line cash in commercial banks which is subject to withdrawal by the reporting agency for regular operations.

b. *Cash on hand and in transit* (*line 2*).—Report on this line cash on hand. Imprest funds and advances with agent cashiers will be included only in cases where the amount of the initial advance was made from a commercial bank account or was treated as a reduction in the fund balance available with the United States Treasury. Imprest funds, advances to agent cashiers, and all other cash on hand not related to specific appropriations or funds but treated as part of the accountability of disbursing officers shall not be included. This item will also

include collections undeposited and deposits for which certificates of deposit have not been confirmed by depositaries as of the close of the period except where such amounts have been included in the accountability of disbursing officers.

c. *Fund balances with United States Treasury.*

(1) *Operating funds (line 3).*—Report on this line (a) amounts available in general, special, and revolving fund accounts including all amounts on deposit in corporation checking accounts with the Treasurer of the United States and on deposit with the Treasurer as special agent for the payment of matured principal and interest of bonds and debentures; and (b) unexpended balances of allocated working fund advances *made to* other agencies.

(2) *Trust and deposit funds (line 4).*—Report on this line balances of trust and deposit fund accounts which have been segregated as such under separate symbols in the Treasury and for which the liabilities are included on lines 46 and 47.

(3) *Allocations from other agencies (line 5).*—Report on this line unexpended balances of allocation and allocated working fund advances received *from* other agencies, regardless of the type of fund account from which advanced (consolidated reports prepared by the Treasury will eliminate this line together with the corresponding liability).

d. *Supplemental Schedule 1.*—A schedule showing the distribution by appropriation and fund account symbol of the amounts reported under "Cash and Fund Balances," by line item, will be presented in accordance with the format illustrated. In those instances where the statement covers only a single fund, the symbol of the fund may be shown in the stub for the appropriate line in lieu of submitting a separate schedule. Once each year, as of June 30, the amount of "Cash in banks" (line 1) will be itemized by bank, location, and amount in accordance with the format illustrated as Schedule 1a.

14. *Investments.*—Report under this group securities acquired and held for investment purposes. The itemization hereunder will show:

a. *Public debt securities (par value) (line 6).*—Report on this line the par value of investments in bonds, notes, bills or other public debt obligations issued by the United States.

b. *Securities of wholly owned Government enterprises (line 7).*—Report on this line investments in securities of wholly owned Government enterprises, including evidences of obligations, capital stock and paid-in surplus. Such securities shall be reported at par.

c. *Unamortized premium or discount (line 8).*—Report on this line the amount of unamortized premium (+) or discount (−) applicable to the securities reported on lines 6 and 7.

d. *Other securities (line 9).*—Report on this line all securities acquired and held for investment purposes other than those reported on lines 6 and 7 above. Such securities shall be reported at par, plus or minus unamortized premium or discount, if any.

e. *Allowance for losses (line 10).*—Report on this line the estimated losses on "Other securities" line 9.

f. *Supplemental Schedules 2 and 3.*—The supporting data for "Public debt securities (par value)" (line 6) will be prepared

monthly as illustrated by Schedule 2 and submitted each month within 20 days after the month for which it is rendered. Data supporting "Securities of wholly owned Government enterprises" (line 7) and "Other securities" (line 9) will be prepared *quarterly* to accompany the Statement of Financial Condition. The amounts of investments shown on line 7 shall be supported in detail in Schedule 3 showing for each issue, the name of the issuing agency, the date of the issue, the interest rate, the call and maturity dates, the par and book values, and whether guaranteed or not guaranteed by the United States. Investments reported on line 9 shall be shown on Schedule 3 itemized to show securities of mixed-ownership and Government-sponsored corporations separately from securities in other general classifications.

15. *Advances to Contractors and Agents.*—Report under this group the amount of unapplied advances outstanding with contractors or agents. The itemization hereunder will show:

a. *Government agencies* (*line 11*).—Report on this line advances made to other Government agencies net of the unexpended balances remaining in allocated working funds advanced to such agencies. (Since an advancing agency normally debits an advance account for the full amount of advances made, a reporting adjustment will be necessary at the end of each period transferring from this account to "Operating funds" line 3, an amount equal to the unexpended balance remaining in any allocated working fund held by the receiving agency. No such adjustment is necessary where the advance is made to a revolving fund or consolidated working fund.)

b. *Other* (*line 12*).—Report on this line the balance of advances made to private contractors and other individuals, except where such advances are included in the accountability of a disbursing officer.

16. *Accounts and Notes Receivable.*—Report under this group accounts and notes receivable. Notes receivable under this item normally should include only those short-term notes that have been accepted in liquidation of open accounts as distinguished from loans made in connection with authorized lending programs which should be reported under "Loans Receivable." The itemization hereunder will show:

a. *Government agencies* (*line 13*).—Report on this line receivables due from other Government agencies, exclusive of advances which are to be reported on line 11 above.

b. *Other* (*line 14*).—Report on this line the amount of accounts and notes receivable due from other than Government agencies, exclusive of advances which are to be reported on line 12 above.

c. *Allowance for losses* (*line 15*).—Report on this line the estimated losses on "Accounts and Notes Receivable—Other."

17. *Inventories.*—Report under this group inventories purchased, produced or acquired by forfeiture of loan collateral or donation. The itemization hereunder will show:

a. *Commodities for sale, finished goods, etc.* (*line 16*).—Report on this line commodities, completed work not yet delivered or finished goods available for sale or delivery though sometimes used by the reporting agency.

b. *Work-in-process (line 17).*—Report on this line the value of work-in-process.

c. *Materials and supplies (line 18).*—Report on this line supplies or materials to be used in the manufacture of a finished product or charged to expense when used. (Supplies normally charged to expense at time of purchase shall not be included.)

d. *Allowance for losses (line 19).*—Report on this line the estimated losses which may be realized on the disposition of the above inventories.

18. *Accrued Interest Receivable.*—Report under this group accrued interest receivable. The itemization hereunder will show:

a. *On public debt securities (line 20).*—Report on this line the amount of accrued interest receivable on direct obligations of the United States issued by the Treasury. The accrual should be computed on the same basis that the Treasury Department computes the accrued interest liability, as set forth in Treasury Department Circular No. 300, Revised, dated April 30, 1955.

b. *On securities of other agencies (line 21).*—Report on this line accrued interest on securities of other Government agencies. This item would include interest on obligations issued by other Government agencies whether guaranteed or not guaranteed by the United States.

c. *Other (line 22).*—Report on this line all accrued interest receivable not reported on lines 20 and 21.

19. *Loans Receivable.*—Report in this group the balance of outstanding loans receivable made, purchased or acquired by rediscount. The amounts reported hereunder will include matured and unmatured principal; extensions, and advances to borrowers. Deposits of borrowers held subject to refund or disbursement on behalf of the borrowers will be reported under the group "Trust and Deposit Liabilities." The itemization hereunder will show:

a. *Government agencies (line 23).*—Report on this line loans to Government agencies, which will usually be evidenced by notes receivable or other similar obligations.

b. *Other (line 24).*—Report on this line loans to other than Government agencies made pursuant to authorized lending programs of the agency. The amount of other loans will be supported by supplemental Schedule 4, showing the following information:

(1) *Loans to aid agriculture.*—Report under this item loans to farmers and to institutions whose primary purpose is to aid agriculture. In this classification will be included loans to agricultural credit corporations; cooperative associations; crop, livestock, and commodity loans; farm mortgage loans; and similar loans.

(2) *Loans to aid homeowners.*—Report under this item loans to homeowners and to institutions whose primary purpose is to aid homeowners. In this classification will be included mortgage loans; reconditioning loans; loans to savings and loan associations; and similar loans.

(3) *Loans to aid industry.*—Report under this item loans to industrial and commercial enterprises. In this classification will be included loans to railroads, manufacturing con-

cerns, and public utilities; ship construction and reconditioning loans; and similar loans.

(4) *Loans to aid States, Territories, etc.*—Report under this item loans to public bodies, such as States, Territories, possessions, municipalities, and similar governmental subdivisions.

(5) *Loans to aid financial institutions.*—Report under this item loans to general financial institutions such as banks, insurance companies, loan companies, and other similar financial institutions.

(6) *Foreign loans.*—Report under this item loans to foreign governments and private entities in foreign countries.

(7) *Other loans.*—Report under this item loans which cannot be appropriately classified under any of the previous loan classifications.

c. *Allowance for losses (line 25).*—Report on this line the estimated losses on "Loans Receivable—Other" (line 24).

20. *Acquired Security and Collateral.*—Report under this item real estate and other mortgage property and pledged collateral acquired and held for sale, including real estate acquired subject to redemption. This acquired security or collateral should be reported net of prior mortgages or liens not assumed. Where the reporting agency has assumed any mortgages or liens in connection with the acquisition of security or collateral, the value of such assets will be reported gross and the mortgage or lien assumed will be reported under "Other Liabilities" (line 52 or 53).

a. *Real estate (line 26).*—Report on this line real estate, including improvements, acquired in the liquidation of loans.

b. *Other (line 27).*—Report on this line other types of security and collateral acquired in the liquidation of loans where the collateral acquired is not commingled in the accounts of the agency with similar items purchased.

c. *Allowance for losses (line 28).*—Report on this line the estimated losses on "Acquired Security and Collateral."

21. *Land, Structures, and Equipment.*—Report under this group the cost of real and personal property acquired by purchase, donation or other methods of acquisition. Residential and farm properties, and other real estate and improvements acquired through foreclosure incident to a lending operation or other Federal-aid projects will not be reported in this section but will be included on line 26. Real property shall be determined for lines 29, 30, and 31 in accordance with General Services Administration Circular No. 80, as supplemented, except that buildings, structures and facilities in process of construction shall be *included* whether or not "available for service" as of the reporting date.

Line 32 "Leasehold improvements" shall include the cost of easements, rights-of-way, and leasehold improvements to land, buildings, or structures, and facilities occupied by the Government as lessee. However, cost of Government-owned buildings, structures, and facilities located on leased land shall be included on lines 30 and 31 as appropriate.

Line 33 "Machinery and equipment" shall include the cost of machinery and processing equipment, motor vehicles, office machinery, furniture, etc.

Accumulated depreciation (line 34) should represent the amount of depreciation (including amortization of leasehold improvements) applicable to the properties listed which has been charged to costs or depreciation expense.

22. *Other Assets.*—Report under this group all other assets which cannot be properly classified under any of the previous asset groups. Real estate or instalment sales contracts, purchase money mortgages, and similar long-term paper acquired in the sale of acquired security or collateral or other owned property will be reported under this group.

a. *Deferred and undistributed charges (line 35).*—Report on this line prepaid expenses, unamortized discount on bonds or debentures issued and outstanding and other deferred charges applicable to the operations of future periods as well as debits arising from disbursements or other charges, the distribution or final disposition of which has not been made.

b. *Blank lines (lines 36 and 37).*—Report on these lines, with appropriate descriptive titles, any other assets which cannot be properly classified under any of the previous asset groups.

c. *Allowance for losses (line 38).*—Report on this line the estimated losses on "Other Assets."

REPORTING OF LIABILITIES

23. *Accounts Payable.*—Report under this group accounts payable consisting of amounts owed to creditors on open account (including voucher schedules not yet accomplished by disbursing officers). The itemization under this group will show:

a. *Government agencies (line 40).*

b. *Other (line 41).*

24. *Accrued Liabilities.*—Report under this group accrued interest and other accrued liabilities. Insofar as practicable, similar liabilities which have matured should be reported under "Accounts Payable." The itemization hereunder will show:

a. *Government agencies (line 42).*—Report on this line accrued liabilities due Government agencies including accrued interest due the Treasury.

b. *Other (line 43).*—Report on this line all other accrued liabilities, including interest on obligations issued to the public.

25. *Advances from.*—Report under this group the amount of unapplied advance payments received for goods or services to be furnished by the reporting agency. The itemization hereunder will show:

a. *Government agencies (line 44).*—Report on this line the amount due Government agencies for advance payments received, including any unliquidated liability for goods and services in connection with an advance of funds under section 601 of the Economy Act or similar legislation (regardless of the type of fund from which advanced).

b. *Other (line 45).*—Report on this line all other liabilities arising from advance payments for goods and services.

26. *Trust and Deposit Liabilities.*—Report under this group the liabilities for amounts held in trust or on deposit (including the unexpended balances of trust fund appropriations) covering such items as cash collateral, proceeds of loans held for the borrowers, time and demand deposits, withholding tax and United States savings bond

deductions, undeposited general fund receipts, and other deposits held subject to refund or application. The itemization hereunder will show:

a. *Government agencies (line 46).*—Report on this line the trust and deposit liabilities due Government agencies, including such items as withheld Federal taxes and undeposited general fund receipts.

b. *Other (line 47).*—Report on this line all other trust and deposit liabilities not recorded under line 46.

27. *Bonds, Debentures, and Notes Payable.*—Report under this group the par value of all outstanding bonds, debentures, notes, and other obligations of a similar character held by the public or other Government agencies (other than the Treasury). The itemization hereunder will show:

a. *Government agencies (line 48).*—Report on this line bonds, debentures, notes, etc., issued to other wholly owned Government corporations and agencies (other than the Treasury). Borrowings from the Treasury are to be reported under "United States Interest."

b. *Other (line 49).*—Report on this line bonds, debentures, notes, etc., issued to other than wholly owned Government corporations and agencies. All marketable obligations shall be reported here even though a portion may have been acquired by another Government agency.

c. *Supplemental Schedule 5.*—Information on the balances reported on these lines will be submitted as illustrated on supplemental Schedule 5 "Bonds, Debentures, and Notes Payable" showing the character, date of issue, the interest rate, the call and maturity dates, the par value of each issue outstanding and whether guaranteed by the United States. The fact that another Government agency may own marketable obligations issued to the public by the reporting agency need not be reported

28. *Other Liabilities.*—Report under this group deferred and undistributed credits and on the blank lines provided, with appropriate descriptive titles, all liabilities which cannot be properly classified under any of the other liability groups.

a. *Deferred and undistributed credits (line 50).*—Report on this line deferred income, unamortized premium on bonds or debentures issued and outstanding and other credits applicable to operations of future periods as well as items arising from receipts or other credits, the distribution or final disposition of which has not been made.

b. *Accrued annual leave (line 51).*—Report on this line the amount of unpaid annual leave which has been charged to cost.

c. *Blank lines (lines 52 and 53).*—Items relating to loans receivable discounted with recourse, and guaranteed loans or other agreements of a guaranteed nature which are subject to redemption by the reporting agency at the option of the holder should be reported here. Any other liabilities which cannot be classified under any other liability group shall be reported here with appropriate descriptive title.

29. *Reserves.*—Report on blank lines 54 and 55 operating reserves established for deferred maintenance, liability reserves, reserves established for the benefit of equity holders and other similar special reser-

vations of earnings not classified as part of the "Accumulated net income or deficit" of the enterprise.

REPORTING OF NET INVESTMENT—PRIVATE INTEREST

30. *Private Interest.*—Report under this group the amount of capital provided from non-governmental sources and the accumulated income or deficit applicable thereto. The par value of the capital stock held by the public will be reported on line 57, and the accumulated net income or deficit, segregated as between reserved and unreserved, on lines 58 and 59.

REPORTING OF NET INVESTMENT—UNITED STATES INTEREST

31. *Interest-Bearing Investment.*—Report under this group capital stock, paid-in capital, paid-in surplus, advances from revolving funds, bonds, notes, or other capital items provided directly by the United States Treasury or through other Government agencies where interest is payable, without regard to earnings, to the Treasury or other Government agencies on such capital investment items. The itemization hereunder will show:

a. *Capital stock* (*line 60*).

b. *Borrowings from Treasury* (*line 61*).—Report on this line borrowings from Treasury represented by notes, bonds, or any other means of borrowing. The amount of unused borrowing authority remaining available shall be reported as a footnote.

c. *Blank line* (*line 62*).—Report on this blank line, with appropriate title, any additional items necessary to reflect the proper total interest-bearing investment of the United States Government, including advances from revolving funds, paid-in capital, paid-in surplus, etc. The title "Paid-in capital" or "Paid-in surplus" shall be used only for those items of Government investment specifically identified as such in the legislation authorizing the capitalization. Where a portion of the capital made available by Congress for an item reported on this line is retained by the Treasury in a separate revolving fund or other holding account, the gross amount remaining available shall be reported as a footnote.

32. *Non-interest-bearing investment.*—Report under this group capital stock, paid-in capital, paid-in surplus, advances from revolving funds, bonds, notes, appropriations, or other capital items, which are non-interest bearing, provided directly by the United States Treasury or through other Government agencies, including the capitalization of assets. The itemization hereunder will show:

a. *Capital stock* (*line 63*).

b. *Borrowings from Treasury* (*line 64*).—Report on this line borrowings from Treasury represented by notes, bonds, or any other means of borrowing. The amount of unused borrowing authority enacted by the Congress shall be reported as a footnote.

c. *Appropriations.*—Report under this group the cumulative amounts made available through congressional appropriations to finance the activity being reported upon, net of appropriation balances rescinded, transferred to "Payment of Certified Claims" or otherwise returned to the Treasury. Agencies operating from

other than revolving funds will show on blank lines 65 and 66 a segregation of appropriations as between the amounts expended and unexpended. Revolving fund enterprises may use blank line 66 for reporting the amount of appropriated funds repaid to the Treasury as a capital transfer in those instances where such presentation is required.

d. *Capitalization of assets (line 67).*—Report on this line the net amount derived through recognition of the capitalized value of property, inventory, and other assets on hand at the inception of the fund, donated to the reporting agency or charged to appropriations other than those included in amounts reported on line 65 or 66 above.

e. *Blank lines (lines 68 through 70).*—Report on these lines with appropriate titles any other segregation of the investment of the Government which by statute or otherwise is required for full disclosure, including advances from revolving funds, paid-in capital, paid-in surplus, etc. The titles "Paid-in capital" or "Paid-in surplus" shall be used only for those items of Government investment specifically identified as such in the legislation authorizing the capitalization. Where a portion of the capital made available by Congress for an item reported on this line is retained by the Treasury in a separate revolving fund or other holding account, the amount so retained shall be reported as a footnote.

33. *Accumulated Net Income or Deficit.*—Report under this group the accumulated earnings or losses applicable to the "United States Interest," segregated as between reserved earnings as required by statute or otherwise and unreserved earnings or deficit. The itemization hereunder will show:

a. *Non-revenue producing operations (line 71).*—Report on this line as a deficit (*) item the cumulative net expenses incurred for any programs set up by law to be non-revenue producing and not associated or identified with the regular revenue producing services provided by the agency.

b. *Reserved (line 72).*—Report on this line the reserves which are established by statute or otherwise from annual earnings. Normally direct charges should not be made to such reserves for losses incurred; such losses should be reflected in the income and expense statement.

c. *Unreserved (line 73).*—Report on this line the cumulative deficit or unreserved surplus resulting from operations.

34. *Deposit of General and Special Fund Revenues (line 74).*—Those enterprises which are not permitted to reuse or hold their receipts but are required to deposit their collections into the Treasury as miscellaneous receipts shall report the cumulative amount of such deposits on this line as a deduction from the investment of United States Interest. This will apply only to enterprises that are financed by other than revolving funds.

REAL AND PERSONAL PROPERTY OF THE DEPARTMENT OF DEFENSE AS OF JUNE 30, 1958

33294—58——5

REAL AND PERSONAL PROPERTY OF THE DEPARTMENT OF DEFENSE AS OF 30 JUNE 1958

Summary

The National Security Act of 1947, as amended, requires the Secretary of Defense to report annually to the President and to the Congress on the property records on "* * * the fixed property, installations, and major equipment items, and stored supplies of the military departments maintained on both a quantitative and monetary basis * * *" (sec. 410 of the National Security Act, as codified in sec. 2701 of title 10, United States Code).

Previous reports made pursuant to section 410 were as of December 31, 1954, December 31, 1955, and December 31, 1956. In addition, reports of similar nature were made to the Committee on Government Operations of the House of Representatives as of June 30, 1955, June 30, 1956 and June 30, 1957.

The current report—as of June 30, 1958—has been designed to satisfy both reporting requirements: the statutory requirement as prescribed in the National Security Act and the requirement of the Committee on Government Operations. Hereafter, only one annual report will be published and it will be as of the end of each fiscal year.

The Department of Defense reports real and personal property with an aggregate value (based principally on acquisition cost) of $149.5 billion as of June 30, 1958. This is an increase of $3.5 billion since the end of the prior fiscal year.

The total value as reported is exclusive of: (1) properties and equipment of the national industrial plant and equipment reserve, which is under the custody of the General Services Administration; (2) supplies and equipment in overseas field Army depots; (3) properties and supplies under the jurisdiction of Civil Works Division, Office, Chief of Engineers, Department of the Army.

During fiscal year 1958 the personal property inventory increased $2.4 billion. Within this broad class of property, however, there were some major shifts—both increases and decreases. All three Departments reported large increases in the equipment issued for use—aircraft, ships, weapons. The amount of equipment issued to using units (active and reserve) increased $4.5 billion. A more detailed accounting for this increase is presented in the separate departmental analyses in part II, section B. On the other hand, the amounts in the supply system and in the hands of property disposal officers decreased $2.3 billion. The principal causes for this decline, reported by the Departments is the large amount of surplus disposed of and sales of stock fund inventories in excess of additions to such stock fund inventories.

A major step to improve supply system reporting was taken during 1956 when a uniform inventory management reporting system was

prescribed. All four services have now implemented the Department of Defense instruction which established this reporting system. Consequently, a consolidated summary of the supply inventories of the four services is available for the first time. (See table 30.) Approximately one-third of the stocks in the supply system are being held for current peacetime operations; over one-fourth are being held for current mobilization requirements; slightly less than one-fourth are excess stocks being screened for possible use by other departments; and the remaining stocks are in long supply which are retained to meet future requirements, since it is more economical to retain them than it is to dispose of them and later have to repurchase them.

Stock fund inventories totaling $8.9 billion and representing about one-fifth of the total inventories in the military supply systems, are summarized in table 29. With the exception of a small increase reported by the Marine Corps, the services reported a substantial decrease in stock fund inventories—as a result of sales and disposals exceeding new procurement.

During fiscal year 1958 the real property inventory increased by $2.0 billion, with $1.1 billion of this increase reported by the Air Force. This increase was largely attributable to recording of properties constructed during recent years and transferred into inventory.

Table 1 shows the geographical location of the properties. Table 2 shows the amount of each class of property held by each military department. Of the total of $149.5 billion of real and personal property, the Army holds $39.6 billion, the Navy $57.8 billion, and the Air Force $52.1 billion. Department of Defense properties consist of $26.9 billion real property; $2.8 billion construction in progress; $47.7 billion equipment and supplies in the supply system; $62.0 billion military and general equipment in use; $5.5 billion production equipment; $0.4 billion industrial fund inventories; and $4.2 billion of surplus personal property held by property disposal officers.

Basis of valuation.—Land and buildings and long-life equipment, such as ships, are priced at acquisition costs. Acquisition cost of ships, as well as land and buildings, are often substantially below current replacement values. Construction in progress is valued on the basis of cost of materials and labor incorporated in the projects under construction. Inventories of consumable goods are at standard prices, representing replacement cost, or at estimated purchase price.

TABLE 1.—*Summary of property holdings, by locations, military department, and type as of June 30, 1958*

[1] Excludes personal property inventories under the jurisdiction of Civil Works Division, Office, Chief of Engineers, Department of the Army, in the amount of $188 million. Includes $2 million personal property of the Office of the Secretary of Defense.

[2] Excludes real property in the amount of $3,911 million under the jurisdiction of the Civil Works Division, Office, Chief of Engineers, Department of the Army.

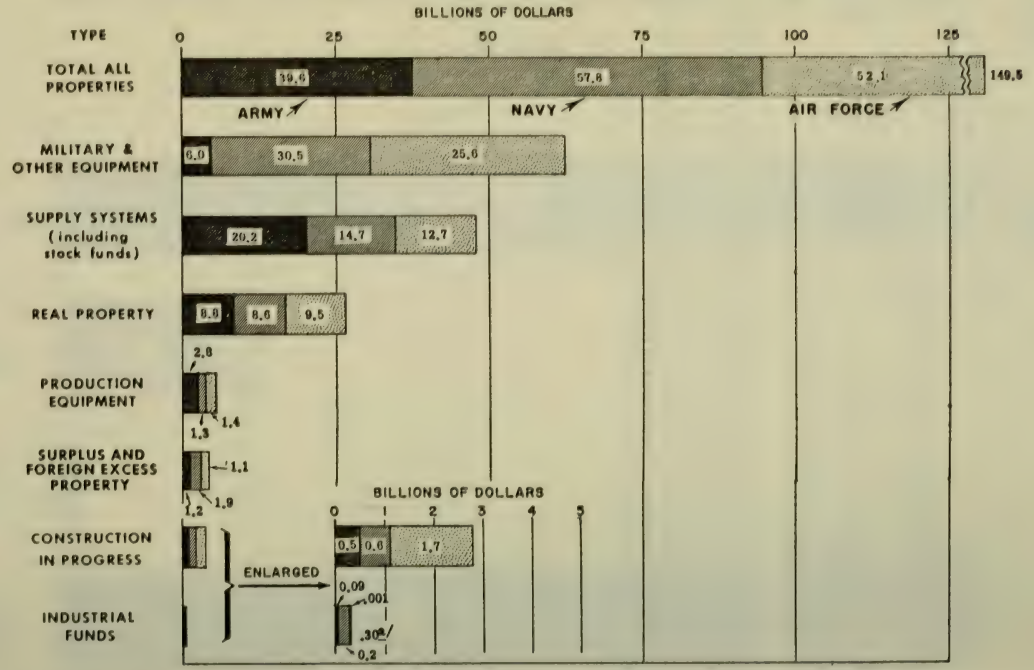

[3] Excludes $1,787 million of work in place on construction under the jurisdiction of the Civil Works Division, Office, Chief of Engineers, Department of the Army.

[4] Consists of raw materials, supplies, and work in process.

CHART 2

DOD REAL AND PERSONAL PROPERTIES, BY MAJOR TYPE AND SERVICE

AS OF 30 JUNE 1958

a/ Includes $100 thousand of Air Force industrial fund inventories, not shown.

The report consists of three parts: Part I. Military Real Property; Part II. Personal Property; and Part III. Progress in Recording and Reporting Inventories. Parts I and II, which contain the accounting-statistical data on inventories, consist of—

Part I. Military real property.
- Section A. Inventory of military real property.
- Section B. Construction in progress.

Part II. Personal property.
- Section A. Inventory of military equipment and supplies in the consolidated supply systems and in stock funds.
- Section B. Military and general equipment issued for use (including production equipment).
- Section C. Inventories held in industrial funds.
- Section D. Surplus personal property in hands of property disposal officers.
- Section E. National industrial reserve.

Although some of the inventories of the Department of Defense contain details which, for reasons of military security, cannot be publicly released, detailed classified data will be made available to appropriate committees of the Congress from time to time, when required.

Part I. Military Real Property

Section A. Inventory of Military Real Property

1. General

This section of the report presents a summary and a brief analysis of the inventory of military real property as of June 30, 1958. Detailed statistics on Civil Works property (river and harbor and flood-control property under the jurisdiction of the Secretary of the Army) are not included in this report.

The real property under the control of the military departments is one of the most important assets of the Department of Defense. In order to achieve maximum defense at minimum cost, such real property must be administered in accordance with modern real property management principles. The real property inventory provides information required to achieve management objectives of better utilization, use of existing real property in lieu of new acquisition, and reduction of real property holdings and maintenance costs by effecting prompt disposition of excess property.

The first inventory report of the military departments submitted under uniform instructions (Department of Defense Instruction 4165.14) covered an inventory of January 1, 1954, which was completed in November 1954. Data from this first report and each of the seven subsequent inventory reports have been used in the preparation of congressional reports by the Department of Defense and the General Services Administration.

The inventory data covering military real property include land and improvements on such property including installed equipment such as fixed overhead crane runways, elevators, lavatories, plumbing and electrical systems. Machine tools and production equipment at such installations, however, are not included.

2. Department of Defense summary

(*a*) *Cost of property controlled.*—The total cost to the United States Government of real property controlled by the 3 military departments as of June 30, 1958, was $26.9 billion, an increase of 8.3 percent over $24.9 billion reported 1 year earlier. About 56 percent of the $2 billion increase, resulting primarily from new construction, was in properties of the Air Force, 27 percent in those of the Army and 17 percent in those of the Navy. Also, of the $2 billion increase about 59 percent occurred in properties located in continental United States, 27 percent in foreign countries, and 14 percent in Territories and possessions. The distribution by military department is illustrated in chart 3. Of the $26.9 billion total, $20.7 billion was in continental United States, $2.9 billion in our Territories and possessions, and $3.3 billion in foreign countries friendly to the United States.

"Controlled," as used throughout this report, has reference to the right of directing the use of property. In connection with buildings, structures, or land, it includes (1) owned (acquired through purchase, condemnation, donation, transfer); (2) leased; (3) public domain (withdrawn permanently or temporarily by military departments); (4) temporary use (acquired through license or permit, temporary public land order, temporary Executive or Territorial order); (5) easements (utility, clearance, etc.); (6) foreign rights (base rights agreements, reciprocal aid, requisitioned, etc.).

CHART 3

COST OF MILITARY REAL PROPERTY CONTROLLED

AS OF 30 JUNE 1958

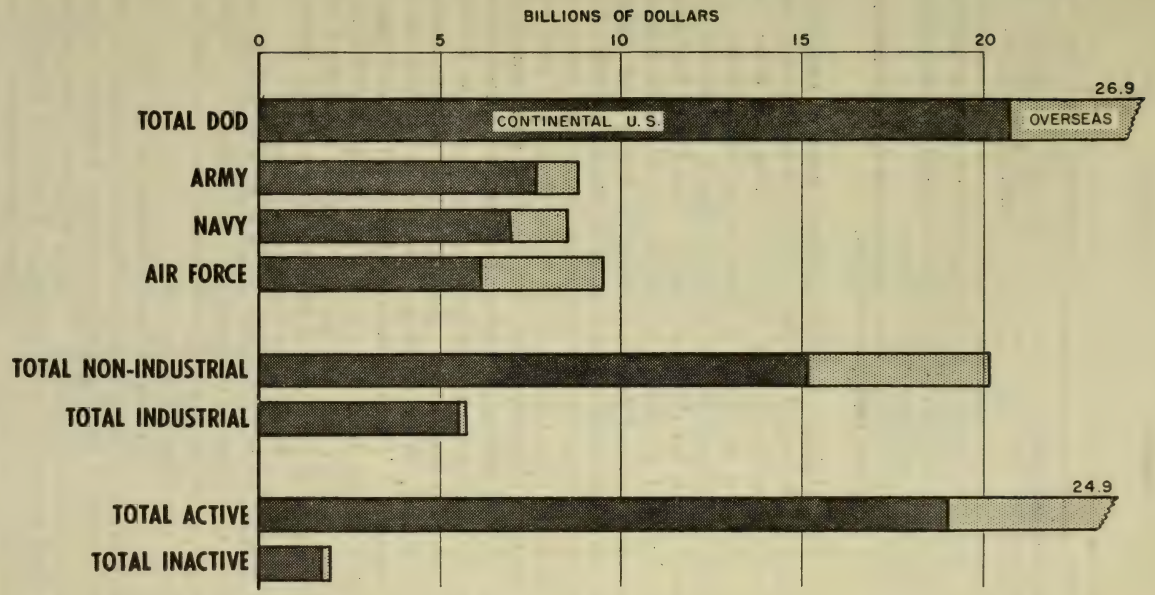

TABLE 3.—*Cost of military real property controlled, by location*[1] *as of June 30, 1958*

DEPARTMENT OF DEFENSE

[Thousands of dollars]

Location	Department of Defense	Army	Navy (including Marine Corps)	Air Force
Total	$26,890,906	$8,815,078	$8,551,721	$9,524,107
Continental United States[2]	20,709,253	[3] 7,637,005	6,972,929	6,099,319
Territories and possessions[4]	2,920,923	582,237	1,243,663	1,095,023
Foreign countries	3,260,730	595,836	335,129	2,329,765

[1] Does not include amount of rentals paid (see table 10) nor the value of property under lease; does include costs of improvements on leased properties.
[2] Excludes real property in the amount of $3,904 million under the jurisdiction of the Civil Works Division, Office, Chief of Engineers, Department of the Army.
[3] Includes National Security Agency.
[4] Excludes real property in the amount of $7 million under the jurisdiction of the Civil Works Division, Office, Chief of Engineers, Department of the Army.

This $26.9 billion does not indicate present market value. Some of the land now owned by the military departments was donated, such as Governors Island, donated by the State of New York to the Army. Some of it is a withdrawal from the public domain. There is no cost for public domain lands and in many instances no costs, or only nominal costs, for donated lands. Land and buildings in some cases were acquired a century or more ago when land prices and building costs were only a fraction of today's prices and costs. Cost data, in some instances, include estimates from old records, and are not always precisely accurate representations of original cost.

Offsetting this tendency to understate real property values is the fact that no allowance for loss of value as a result of depreciation is reflected. However, because the data represent an inventory as of a given date, they do not include costs of structures which were demolished prior to that date. As additional construction or acquisition is accomplished, it is written into the inventory at the cost to the Government. The original cost figure is of significance as an historical measure of the military real property holdings of the Department of Defense, and in the absence of current appraised valuations (which would be very costly and of doubtful utility) is the only monetary measure of the Federal proprietary interest.

The cost to the Government data do not include amount of rentals paid nor the value of the property under lease. These data do include, however, costs of any improvements made and owned by the Government on the leased properties.

At the request of the House Committee on Government Operations, an estimate has been made of the current value of the public domain land controlled by the Department of Defense. These estimates are shown in tables 4 and 5. Table 4 shows total estimates for military and civil functions separately, and table 5 distributes the estimates for military functions by military department. These estimates are not included in the $149.5 billion book value total of the real and personal property for military use or the $5.9 billion total for civil functions.

[1] Less than $500.

(*b*) *Real property in foreign countries.*—The $3.3 billion investment in real property in friendly foreign countries represents the cost of that real property to the United States. It consists of troop and family housing, storage facilities, airfields, maintenance facilities, hospitals, and various other kinds of real property required by our armed forces overseas.

International agreements which make it possible to station our armed forces in friendly countries provide the basis for their occupancy of real property in those countries and United States investment in such real property. In recent years negotiation of such agreements has provided some recognition of the residual value of United States facilities constructed with appropriated funds. Occupancy, in effect, is on a term basis varying from month to month (revocable at the sole discretion of the host government) to a firm term of 99 years. Areas occupied vary from simple privately owned leased space to large holdings of host governments.

In occupied territories, occupancies have been effected through the use of requisitions. These programs are financed by the governments of the occupied countries with their own currency, such as the deutschemark-financed properties improved or constructed in West Germany. (Notwithstanding the recently acquired sovereignty of West Germany, these arrangements are still in effect as an interim agreement.) This report includes only the cost, if any, to the United States of properties in occupied territories.

During the past 4 years, a number of properties in Japan, Korea, and West Germany have been released by the Department of Defense to the governments of these countries. The evacuation of Austria by our occupying forces resulted in releasing to the Austrian Government the properties these forces had required.

In certain countries, title to improvements constructed by the Department of Defense is vested in the United States until termination of agreements by which occupancy was established. Upon expiration of such an agreement, disposition of the property is accomplished in accordance with the terms of the agreement. (Title may pass automatically to the host country or the property may be removed or sold by the United States or its ultimate disposition may be left open for further negotiations.) In other instances, residual value clauses provide that, upon termination of agreements, the host government agrees to pay the residual value of the improvements constructed by the Department of Defense in such amounts as may be jointly agreed upon by the host government and the United States.

These facts emphasize the desirability of awareness that our real property in foreign countries is carried on the books of the Department of Defense and in this report at its cost to the United States. The physical facility represented by an investment in a foreign country may be identical with a facility within the United States owned by our Government but it represents a very different type of an investment. It is an investment arising from the world situation at the time it was made and the resulting national commitments of the United States.

The report does not include any investment by the United States for infrastructure (the NATO common infrastructure program), which is a term used to identify the fixed military facilities needed to support effective combat operations by the integrated NATO forces. Con-

struction costs for infrastructure facilities are shared by all NATO nations. Actual construction is the responsibility of the nation in whose territory a project is located.

(*c*) *Ownership and status.*—The figures in table 3 show that on a cost basis more than three-fourths (77 percent) of the military real property controlled is located within the continental United States. Of the remainder, 10.9 percent is in Territories and possessions and 12.1 percent in foreign countries. About 41 percent of the worldwide increase during the year was in properties outside continental United States.

The distribution by military department of the military real property of the Department of Defense has changed slightly. As of 1 year ago, the proportions were indicated as 33 percent for Army, 33 percent for Navy, and 34 percent for the Air Force. Corresponding proportions for June 30, 1958, were 33 percent, Army; 32 percent, Navy; and 35 percent, Air Force.

Within the continental United States, Army controls nearly 37 percent of the Department of Defense total, while Navy's holdings in the Territories and possessions represent 43 percent of the Department's total and, in foreign countries, Air Force controls 71 percent of the Defense total.

It should be pointed out that, from the standpoint of construction, Air Force installations are generally newer than those of either of the Army or Navy, and thus their costs are generally fairer representations of current value. Some of the facilities transferred to the Air Force, however, would also fall into the category of rather old structures for which original costs are not truly representative of current values.

The cost of properties in nonindustrial installations (training centers, depots, hospitals, command headquarters, ports, housing, etc.) were more than three-fourths (78.9 percent) of the cost of all properties on a worldwide basis. Reference to table 6 shows that properties located at installations in an inactive or standby status on a worldwide basis cost nearly $2 billion, 7.3 percent of all properties. This proportion was 6.1 percent 1 year ago.

TABLE 6.—*Cost of military real property controlled by status and location as of June 30, 1958*

DEPARTMENT OF DEFENSE

[Thousands of dollars]

Location	All intallations	Active installations	Inactive installations [1]
Total	$26,890,906	$24,915,051	$1,975,855
Continental United States	20,709,253	18,945,225	1,764,028
Territories and possessions	2,920,923	2,744,460	176,463
Foreign countries	3,260,730	3,225,366	35,364

[1] Includes standby and excess installations.

(*d*) *Types of properties.*—Table 7 shows the military real property costs for the entire Department of Defense by broad geographical locations and by major facility groupings. Nearly one-fourth of the overall total consists of utilities and ground improvements (mainly roads and walks).

TABLE 7.—*Cost of military real property by location and facility class as of June 30, 1958*

DEPARTMENT OF DEFENSE

[Thousands of dollars]

Facility class	Total	Continental United States	Territories and possessions	Foreign countries
Total	$26, 890, 906	$20, 709, 253	$2, 920, 923	$3, 260, 730
Operational and training	5 222. 935	3, 394, 533	730, 919	1, 097, 483
Maintenance and production	3, 976. 877	3, 517. 916	217. 678	241, 283

Administrative	907. 449	780. 793	55, 587	71, 069
Housing and community	4, 954, 454	3, 512. 094	708, 413	733. 947
Utilities and ground improvements	6, 560, 569	5, 176, 872	712, 477	671, 220
Real estate, land	662. 878	594, 294	53, 463	15, 121

Table 8 shows the 10 categories of real property, grouped in order of cost, in which the Department of Defense has the largest dollar investment. These data are presented graphically in chart 4. These 10 categories on a worldwide basis represent a total cost of $17 billion or almost two-thirds (63.3 percent) of the cost of all Defense-controlled real property. Comparable data are presented for each of the military departments in tables 19 (Army), 23 (Navy), and 27 (Air Force). Troop housing continues to be the largest single category followed by airfield pavements and maintenance facilities.

TABLE 8.—*Area and cost of 10 largest categories of real property by category, worldwide as of June 30, 1958*

DEPARTMENT OF DEFENSE

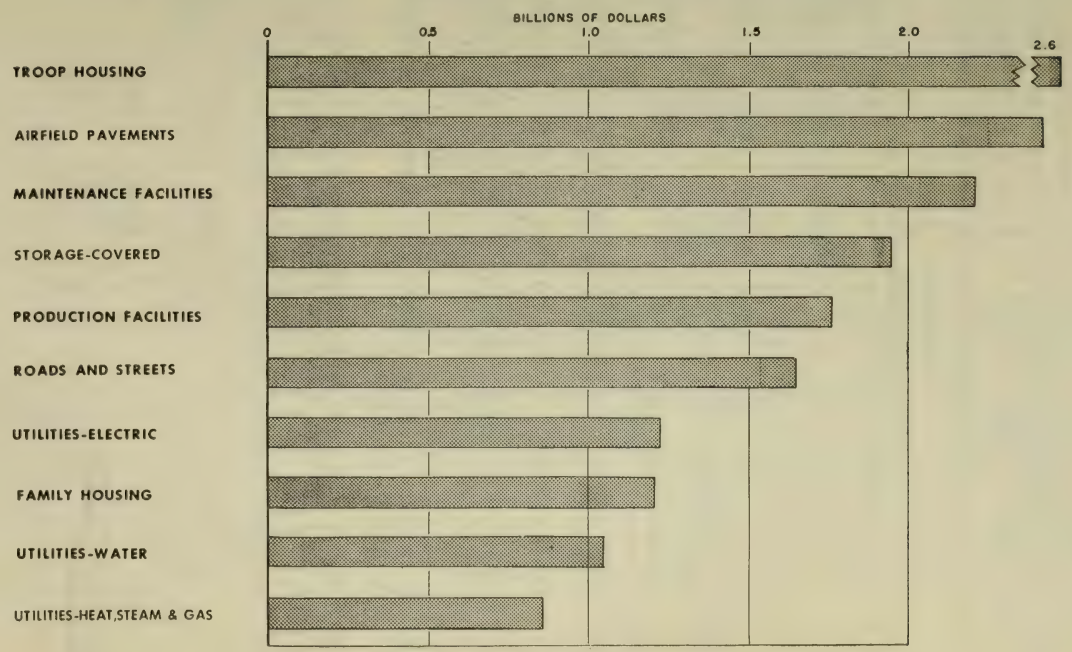

Category	Area (thousands of square feet)	Cost to U. S. Government (thousands of dollars)
Troop housing (excluding emergency housing)	610, 284	$2, 646, 491
Airfield pavements	[1] 455, 391	2, 434, 671
Maintenance facilities	259, 677	2, 223. 359
Storage, covered (depot and installations) [2]	590, 384	1, 945, 858
Production facilities	166, 317	1, 753, 518
Utilities:		
Roads and streets	[1] 745, 724	1, 641, 886
Electric [3]	6, 591	1, 233, 088
Family housing [4]	302, 903	1, 217, 834

[1] Square yards.
[2] Excludes liquid fuel, ammunition, and cold storage.
[3] Includes both operating plants and distribution lines.
[4] Dwellings only.

CHART 4

COST OF THE TEN LARGEST CATEGORIES OF DOD REAL PROPERTY WORLD-WIDE

AS OF 30 JUNE 1958

33294—58——6

The cost of land controlled by the Department of Defense represents only 2.5 percent of the total cost of all real property controlled by the Department of Defense.

Cost of buildings, on the other hand, represents 56 percent of the total costs of military real property controlled. Table 9 shows these building costs by broad geographical areas and by military department. In the continental United States total costs of buildings for the Army are highest; whereas, within the Territories and possessions and in foreign countries, those for the Air Force are highest.

TABLE 9.—*Cost of buildings, by military department and location, as of June 30, 1958*

DEPARTMENT OF DEFENSE

[Dollar amounts in thousands]

Location	Department of Defense	Army	Navy (including Marine Corps)	Air Force
Total	$15,123,705	$5,650,189	$4,151,745	$5,321,771
Continental United States	11,868,091	4,911,857	3,504,200	3,452,034
Territories and possessions	1,473,634	371,938	500,773	600,923
Foreign countries	1,781,980	366,394	146,772	1,268,814
Cost of buildings as a percent of cost of all properties	56.2	64.1	48.5	55.9

NOTE.—Where applicable, these building cost data are included in all tables showing costs in this section.

(*e*) *Lease rentals.*—The rental data in table 11 indicate that rentals received, on a worldwide basis, represent 31 percent of the amount paid in rentals shown in table 10. The total worldwide annual rental bill paid for properties used by the Department of Defense dropped from $31 million on June 30, 1957, to $29 million on June 30, 1958. Rentals received from properties leased to others also decreased from $17.3 million to $9 million.

TABLE 10.—*Annual rental paid for military real property leased from outside sources, by military department and location as of June 30, 1958*

[Thousands of dollars]

Location	Department of Defense	Army	Navy (including Marine Corps)	Air Force
Total	$28,926	$20,487	$3,390	$5,049
Continental United States	20,072	14,748	2,181	3,143
Territories and possessions	260	234	1	25
Foreign countries	8,594	5,505	1,208	1,881

TABLE 11.—*Annual rental received for military real property leased to outside sources, by military department and location as of June 30, 1958*

[Thousands of dollars]

Location	Department of Defense	Army	Navy (including Marine Corps)	Air Force
Total	$8,999	$5,847	$1,679	$1,473
Continental United States	8,453	5,673	1,309	1,471
Territories and possessions	363	115	246	2
Foreign countries	183	59	124	

(*f*) *Acreage controlled.*—The Department of Defense through the 3 military departments controlled a total of 32.5 million acres of land throughout the world on June 30, 1958, a decrease of 7 percent, or about 2.5 million acres, less than that reported 1 year earlier. During the year, Air Force and Army acreage holdings decreased about 2.4 million and 0.4 million, respectively, whereas those for the Navy increased about 378,000. Of the total drop during the year, 64 percent was in Territories and possessions, 23 percent in the United States, and 13 percent in foreign countries. The largest change recorded was in temporary use permits, a drop of 1.99 million acres; this was about 80 percent of the overall worldwide decrease. Part of this drop was offset by an increase of 351,000 acres in the public domain category. The distribution of worldwide acreage controlled by the Department of Defense is illustrated in chart 5 and in table 12.

TABLE 12.—*Acreage of military real property controlled by military department and location as of June 30, 1958*

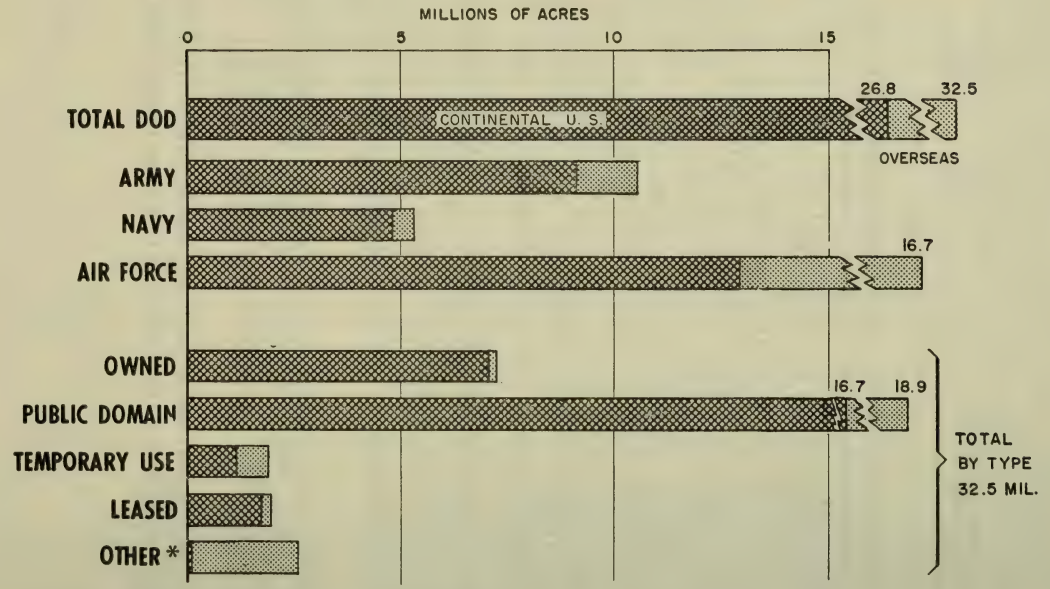

Location	Department of Defense	Army	Navy (including Marine Corps)	Air Force
Total	32,517,640	10,519,871	5,298,421	16,699,348
Continental United States [1]	26,796,409	8,998,575	4,808,490	12,989,344
Territories and possessions [2]	3,376,786	1,037,970	221,840	2,116,976
Foreign countries	2,344,445	483,326	268,091	1,593,028

[1] Excludes 4,662,508 acres under the jurisdiction of the Civil Works Division, Office, Chief of Engineers, Department of the Army.
[2] Excludes 539 acres under the jurisdiction of the Civil Works Division, Office, Chief of Engineers, Department of the Army.

CHART 5

ACREAGE CONTROLLED

AS OF 30 JUNE 1958

*FOREIGN BASE RIGHTS, PUBLIC LANDS, AND EASEMENTS

Total holdings include land owned, from the public domain, used on temporary permit, leased and various occupancy rights (easements and foreign rights of different types). Table 13 shows the type of occupancy of the land on a geographic basis.

TABLE 13.—*Acreage of military real property controlled, by geographic location and type of tenure as of June 30, 1958*

Type of tenure	Total	Continental United States	Territories and possessions	Foreign countries
Total	32, 517, 640	26, 796, 409	3, 376, 786	2, 344, 445
Owned	7, 163, 676	7, 014, 760	148, 916	----------
Public domain	18, 931, 294	16, 673, 234	2, 258, 060	----------
Temporary use	1, 877, 713	1, 151, 147	719, 725	6, 841
Leased	2, 025, 224	1, 871, 640	45, 072	108, 512
Easements	140, 374	85, 628	1, 935	52, 811
Public lands	175, 741	----------	175, 741	----------
Foreign rights	2, 203, 618	----------	27, 337	2, 176, 281

Of Defense-controlled acreage, 82 percent is within the continental United States as compared with 78 percent a year earlier. Slightly more than 10 percent is located within the Territories and possessions and a little over 7 percent in foreign countries. The Air Force need for space to accommodate air training, maneuver, test, and bombing ranges is illustrated by the fact that it controls 51 percent of the Department of Defense total acreage.

Acreage controlled by the military departments in the continental United States represents 1.4 percent of the total land area in the country. The 26,796,409 acres owned or leased, or under permit, represent about 41,869 square miles. The relationship of the Defense-controlled lands to the total acreage in the continental United States is shown in table 14.

TABLE 14.—*Acreage in United States compared to acreage under Department of Defense, by type of tenure as of June 30, 1958*

Type of tenure	Acres (thousands)	Percent of United States total
United States, total acreage	1, 903, 825	100. 0
Department of Defense, total acreage	26, 796	1. 41
Owned	7, 015	. 37
Public domain	16, 673	. 88
Temporary use	1, 151	. 06
Leased	1, 872	. 10
Easements	85	(1)

[1] Less than 1/100 of 1 percent.

In each of 6 States the Department of Defense controls more than 1 million acres. The six are, in order of magnitude of acreage controlled, Nevada, California, Arizona, New Mexico, Utah, and Idaho. Total acreage in these 6 under Department of Defense control is 19.3 million representing 72.1 percent of the continental United States total Defense-controlled. Table 15 lists all of the States and the District of Columbia, showing for each the total cost and acreage included in Defense-controlled real property. The six States in which Defense has the largest real property investment in order of

magnitude of investment are California, Texas, Virginia, New York, Maryland, and Washington. Total costs of the military real property controlled in these 6 States represents almost two-fifths (39.8 percent) of the continental United States total.

TABLE 15.—*Cost and acreage of military real property controlled, by States as of June 30, 1958*

DEPARTMENT OF DEFENSE

[1] Land and improvements.

3. Department of the Army

Real properties owned and controlled on a worldwide basis by the Department of the Army at June 30, 1958, cost $8.8 billion, a 6 percent increase over the $8.3 billion 1 year earlier. Of the Army worldwide total, 86.6 percent was located within the continental United States, 6.6 percent in United States Territories and possessions, and 6.8 percent in foreign countries. These were approximately the same proportions as 1 year earlier.

Annual rentals paid by Army for property it was leasing at June 30, 1958, were up from $18.8 million 1 year earlier to $20.5 million. About 29 percent of the rental cost is offset by the $5.8 million Army receives in rentals for its property leased to other users. The increase in rentals during the year ending June 1958 is due primarily to housing requirements at antiaircraft defense sites in continental United States. The Army rental bill for properties in foreign countries decreased 9 percent, from $6.1 million to $5.5 million. Since June 1955 the Army rental bill in foreign countries has been reduced more than one-half, mainly due to the practice of releasing properties wherever practicable.

Total worldwide acreage under Army control at June 30, 1958, was 10.5 million acres; 85.5 percent within the continental United States, 9.9 percent in the Territories and possessions, and 4.6 percent in foreign countries. The 3.6 percent overall decrease during the year ending June 1958 resulted from a drop of 83,000 acres in continental United States, 63,000 in Territories and possessions, and 250,000 in

foreign countries. A large part of the latter decrease was in Japan.

Military real property under Army control within the continental United States as of June 30, 1958, had a total cost of $7.6 billion, an increase of 6 percent over the $7.2 billion for a year earlier. The proportion of Army installations in active status, on a dollar cost basis, at the close of the year within continental United States was 83 percent. This was down slightly from the 88 percent for a year earlier due to closing of certain industrials. On a worldwide basis, Army active installations constitute 91.5 percent of the total, on a dollar cost basis. Table 16 presents cost and rental data reported by Army for the military real property under its control within the continental United States on June 30, 1958.

TABLE 16.—*Costs and rentals of military real property controlled in continental United States, by status and type of installation as of June 30, 1958*

[1] Land and improvements.
[2] Includes excess and standby.
[3] Includes National Security Agency.

The ratio on a basis of cost to the Government, of Army's nonindustrial installations to total installations within the United States was 69 percent. The dollar total of the industrial-type installations remained at $2.3 billion. The Government operated 39 percent, on a cost basis, of the industrial-type active installations, whereas, 61 percent were operated by contractors.

Annual rentals paid by Army for property it leases in continental United States amounting to $14.7 million were offset considerably by rentals received in the amount of $5.7 million. Slightly over 81 percent of the rentals received are from industrial properties.

The total acreage controlled by Army within the continental United States is reported in table 17 by status and by type of land occupancy and installations. In the year ending June 30, 1958, the Army-owned acreage within continental United States decreased 83,000 acres.

The acreage and cost to the Government of the military real property controlled by Army in each of the States and the District of Columbia is shown in table 18. Six States, ranked by dollar size of the largest cost, were Virginia, Texas, California, Maryland, New York, and Alabama. The cost of the properties in these States constitutes 29 percent of Army's total continental United States cost. The total acreage (almost 6 million) controlled by Army in the 6 States having over one-half million acres; i. e., New Mexico, California, Arizona, Texas, Utah, and Georgia, constitutes 65 percent of its continental United States acreage. Virtually all (95 percent) of the public domain land under Army control is located in the 4 States of New Mexico, Arizona, California, and Utah.

TABLE 18.—*Cost and acreage of military real property controlled by tenure and States as of June 30, 1958*

[1] Data represent the cost of land and improvements.

The 10 categories of real property in which Army has the greatest dollar investment in continental United States are presented in table 19. They are shown graphically in chart 6 along with Navy and Air Force data. The total cost represented by these categories is $5.2 billion, 74 percent of the total Army continental United States cost.

TABLE 19.—*Quantity and costs of 10 largest categories of military real property in continental United States, by category, as of June 30, 1958*

DEPARTMENT OF THE ARMY

Category	Area	Other measure		Number of buildings	Cost to U. S. Government (thousands)
		Unit	Quantity		
Production facilities	67,916,000 square feet			10,429	$897,250
Troop housing (excluding emergency)	176,853,000 square feet	Men	1,309,423	37,992	809,701
Utilities, roads and streets	336,019,000 square yards	Mile	22,020		694,444
Covered storage [1]	208,603,000 square feet			17,782	678,214
Utilities, water [2]	2,136,000 square feet	Million gallons per day.	668	1,782	389,457
		MFT	47,142		
Storage, ammunition	54,022,000 square feet			23,834	368,847
Administration buildings	55,079,000 square feet			7,520	366,888
Family housing	63,860,000 square feet	Family	50,061	20,932	366,845
Maintenance facilities	51,542,000 square feet			7,996	300,341
Utilities, electric [2]	1,525,000 square feet	Kilovolt	457,414	1,138	280,388
		MFT	79,973		

[1] Excludes liquid fuel, ammunition, and cold storage.
[2] Includes operating plants and distribution lines.

The production facilities as a functional group represents the largest category, on a cost basis, of properties held by the Army in this country. This category consists of the specific plants, shops, and manufacturing enterprises which are in operation at nonindustrial installations as well as those at industrial installations. Electric utilities replaced heating utilities (steam and gas) as the 10th category during the year ending June 1958.

Department of the Army real properties outside the continental United States represented, on June 30, 1958, a cost of $1,178 million as compared with $1,088 million 1 year earlier. Slightly more than half (55.2 percent) of the cost of overseas properties is in foreign countries.

Army retains a large block of Alaskan land under public domain withdrawal and temporary use permit. It also exercises base rights on 483,000 acres in foreign countries. Sizable releases of lands were made during the past year in Germany and Japan.

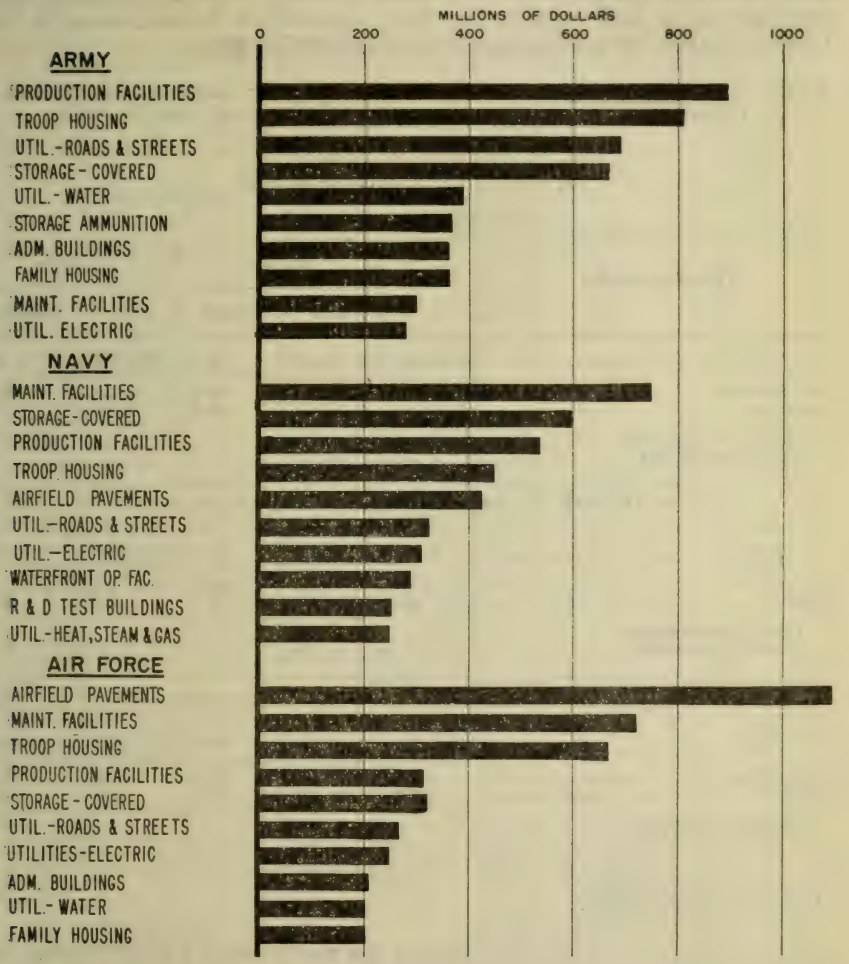

Troop housing continued to comprise the Army's largest cost category in both the Territories and possessions and foreign countries. On a cost basis, 96 percent of the properties are at active installations in Territories and possessions and virtually all (99.4 percent) in foreign countries.

CHART 6 *

COST OF 10 LARGEST CATEGORIES OF REAL PROPERTY

CONTINENTAL U.S.

AS OF 30 JUNE 1958

* See Tables 19, 23 and 27

4. Department of the Navy

Real property controlled and used by the Navy on a worldwide basis cost $8.6 billion, an increase of 4 percent over the $8.2 billion reported 1 year earlier. Of the $338 million increase, about 71 percent was in continental United States.

Annual rentals received by the Navy on a worldwide basis, as of June 30, 1958, amounted to $1.7 million as compared to rental payments of $3.4 million. Rental receipts dropped sharply because of expiration of some leases on industrial properties.

Navy's acreage controlled, on a worldwide basis, was 5.3 million acres; about one-half the amount under Army control and roughly

one-third the acreage under Air Force control. During the year, Navy acreage, worldwide, increased 378,000 acres. A large part of this resulted from increased activity at one of the air stations.

On a cost basis, nearly 82 percent of Navy-controlled property is located within the continental United States. Table 20 presents data showing costs and rentals for Navy-controlled installations in the United States by nonindustrial and industrial types.

TABLE 20.—*Costs and rentals of military real property controlled in continental United States, by status and type of installation as of June 30, 1958*

DEPARTMENT OF THE NAVY

[1] Land and improvements.
[2] Includes excess and standby.

Navy properties controlled within the continental United States, at June 30, 1958, on a cost basis were up $240 million, or 3.6 percent, over those reported for June 30, 1957. Inactive properties on a cost basis comprised 3.5 percent, as compared with 4.5 percent a year ago, of the total Navy real properties in continental United States. On a cost basis, the Navy industrial facilities comprised 36 percent of the total Navy United States real properties. A year earlier the corresponding proportion was 42 percent.

Navy owned about 25 percent of the acreage it had under its control within the continental United States on June 30, 1958. During the year, a decrease of 330,000 acres was reported in owned land. An adjustment occurred whereby this amount was included in the public domain category. The data in table 21 provide certain detail relative to Navy acreage by type of occupancy and installation. Increases in leased and public domain acreage were required for activi-

ties at the air station mentioned earlier. However, a large block of the public domain land at this specific installation is outgranted for test purposes. Of total acreage controlled by the Navy in continental United States, 96 percent is located at installations which are in an active status.

In table 22 data are presented showing State detail as to total cost and acreage of the military real property controlled by Navy. On the basis of cost, 56 percent of Navy's total real property investment in the continental United States is in the 6 States of California, Virginia, Pennsylvania, Maryland, Florida, and New York. The States are ranked in order of amount invested. The heavy concentration of naval activities in the State of California is well illustrated by the fact that 25 percent of the United States total cost is represented by California installations which have an acquisition cost of $1,741 million. In terms of acreage, 56 percent of the Navy total represents California land. The next largest amounts are in Nevada, which represents 23 percent of the Navy United States total. About 94 percent of the Navy public domain is in California and Nevada.

TABLE 22.—*Cost and acreage of military real property controlled, by tenure and States as of June 30, 1958*

DEPARTMENT OF THE NAVY

State	Cost to U. S. Government [1] (thousands)	Land area (acres)					
		Total controlled	Owned	Public domain	Temporary use	Leased	Easements
Total	$6,972,929	4,808,490	1,200,663	2,878,234	330,827	391,023	7,743

[1] Data represent the cost of land and improvements.

The 10 categories representing the greatest cost to Navy are shown in table 23 and were previously illustrated in chart 6. In total, they constitute 54 percent of the overall Navy real property costs in the continental United States, as compared with 59 percent 1 year earlier. During the year, research and development test buildings supplanted water utilities in the first 10 largest categories. The broad diversification of Navy activities in the country is illustrated by the table 23 data. While shipbuilding is one of the Navy's leading peacetime activities and accounts for a large part of Navy's industrial activity, there are numerous other activities of importance within the industrial field, namely, ordnance plants, various test stations (underwater laboratories, torpedo, radar, electronics, ballistics, etc.), powder factories, ammunition depots, and other munitions type production. Within continental United States, the largest Navy amount is invested in the maintenance facility category.

TABLE 23.—*Quantity and cost of 10 largest categories of military real property in continental United States, by category, as of June 30, 1958*

DEPARTMENT OF THE NAVY

Category	Area	Other measure		Number of buildings	Cost to U. S. Government (thousands)
		Unit	Quantity		
Maintenance facilities	73,502,000 square feet			4,785	$747,833
Storage, covered [1]	161,621,000 square feet			10,212	599,453
Production facilities	56,981,000 square feet			1,816	532,092
Troop housing (excluding emergency).	164,207,000 square feet	Men	740,748	5,753	445,563
Airfield pavements	111,972,000 square yards				424,979
Utilities:					
Roads and streets	135,166,000 square yards	Mile	11,324		327,215
Electric [2]	1,294,000 square feet	Kilovolt	395,473	1,149	311,814
		MFT	42,894		
Waterfront operational facilities.[3]	5,002,000 square yards	Feet berth	747,485		288,197
Research and development and test buildings.	12,753,000 square feet			1,707	257,910
Utilities, heat, steam and gas.[2]	2,954,000 square feet	Horsepower	716,728	935	251,212
		MFT	25,038		

[1] Excludes liquid fuel, ammunition, and cold storage.
[2] Includes operating plants and distribution lines.
[3] Piers and wharves; excludes seawalls, bulkheads and other waterfront facilities.

Eighteen percent ($1.6 billion) of the Navy real property total is outside of continental United States. Of this total, $1,243 million was in Territories and possessions and $335 million was in foreign countries as of June 30, 1958. The Navy controlled 222,000 acres in Territories and possessions and 268,000 in foreign countries on June 30, 1958. In these areas outside the United States, the Navy released about 75,000 acres during the year ending June 1958. The 10 largest categories of real property in Territories and possessions represent a cost to the United States Government of $832 million, and in foreign countries, $228 million.

5. Department of the Air Force

Worldwide real property under Air Force control on June 30, 1958, cost the Government $9.5 billion. This represented, as indicated earlier in the report, 35.4 percent of the Department of Defense total.

A part of the 13 percent increase ($1.1 billion) over that of 1 year earlier was attributable to completion and transfer to inventory of properties constructed during recent years. About 57 percent of the increase was recorded in properties outside continental United States.

Air Force annual rentals paid for property worldwide were decreased sharply during the year ending June 30, 1958, from $7.6 million to $5.0 million. About 29 percent of the rental bill is offset by receipts from properties leased to others in the amount of $1.5 million.

Land controlled by the Air Force all over the world totaled 16.7 million acres on June 30, 1958, a drop of 13 percent from the 19.1 million acres reported a year earlier. Releases of lands were made of about 926,000 acres in continental United States and 1,514,000 in Territories and possessions.

The data in table 24 show that Air Force controlled military real property within the continental United States represents a cost to the Government of $6.1 billion, as compared with the $5.6 billion a year earlier. Of the total worldwide Air Force investment, 64 percent (about two-thirds) covers installations within continental United States.

TABLE 24.—*Costs and rentals of military real property controlled in continental United States, by status and type of installation, as of June 30, 1958*

DEPARTMENT OF THE AIR FORCE

[Thousands of dollars]

A. COST TO U. S. GOVERNMENT [1]

Type of installation	Total	Active		Inactive [2]	
		Cost	Percent	Cost	Percent
Total	$6,099,319	$5,899,902	96.7	$199,417	3.3
Nonindustrial	5,428,523	5,269,393	97.1	159,130	2.9
Industrial	670,796	630,509	94.0	40,287	6.0
Government operated					
Contractor operated		630,509			

B. ANNUAL RENTAL PAID FOR LEASED PROPERTY

Total	$3,143	$3,132	99.6	$11	0.3
Nonindustrial	3,142	3,131	99.6	11	.3

Industrial	828	801	96.7	27	3.3
Government operated					
Contractor operated		801			

[1] Land and improvements.
[2] Includes excess and standby.

Only 3.3 percent of the United States total is at inactive and standby installations. Industrial activities under Air Force control, all of which are contractor operated, constituted only 11 percent of the continental United States total Air Force property value. On a dollar basis, only 6 percent of the Air Force industrial investment is covered by standby plants.

Air Force-controlled acreage within the continental United States was approximately 13 million acres on June 30, 1958. The overall decrease of 926,000 acres during the year was largely reflected in reductions of 1.3 million acres of temporary use land and 165,000 acres of owned land. A part of the temporary use reduction was offset by an increase in public domain lands. As plans are finalized and pending withdrawal transactions are consummated, shifts often occur from the temporary use to the public domain category. Of the 16.7 million acres withdrawn from public domain for Defense use within continental United States, the Air Force controls 60 percent. Much of this land is used for gunnery and advanced fighter bomber training. Table 25 provides additional detail on categories of lands held by the Air Force.

Land at inactive installations constituted 5 percent of the total Air Force-controlled lands within continental United States. Within this 5 percent are 34,000 acres excess to the Air Force's needs.

The State pattern of military real property controlled by the Air Force is shown in table 26. Some degree of concentration is suggested by the fact that the cost of the properties controlled in the five States of California, Texas, Florida, Ohio, and New York constituted 39 percent of the Air Force's United States total. The Air Force has more than $300 million invested in each of these States.

TABLE 26.—*Cost and acreage of military real property controlled, by tenure and States as of June 30, 1958*

[1] Data represent the cost of land and improvements.

The physical quantity of land controlled in 4 States, each with over 1 million acres—Nevada, Arizona, New Mexico, and Utah—comprise 70 percent of the total Air Force-controlled acreage in this country. Nearly 94 percent of the Air Force-controlled acreage in these 4 States is land from the public domain.

On the basis of cost, table 27 presents the 10 largest categories of Air Force-controlled real property. These are compared graphically in chart 6. The total of these major categories represents 70 percent of the Air Force total cost within this country. Airfield pavements account for 18 percent of the total Air Force investment within continental United States. Maintenance facilities is the second largest category, followed closely by troop housing.

TABLE 27.—*Quantity and cost of 10 largest categories of military real property in continental United States, by category, as of June 30, 1958*

DEPARTMENT OF THE AIR FORCE

Category	Area	Other measure		Number of buildings	Cost to U. S. Government (thousands)
		Unit	Total		
Airfield pavements	200,972,000 square yards				$1,097,112
Maintenance facilities	82,617,000 square feet			7,083	722,513
Troop housing (excluding emergency).	98,602,000 square feet	Men	565,033	13,989	670,532
Production facilities	39,447,000 square feet			245	317,887
Covered storage [1]	96,122,000 square feet			6,197	323,021
Utilities:					
Roads and streets	117,825,000 square yards				270,341
Electric [2]	574,000 square feet	Kilowatt	2,459,286	733	247,209
		MFT	52,427		
Administration buildings	34,980,000 square feet			6,963	209,623
Utilities, water [2]	759,000 square feet	Million gallons per day.	10,380		
		MFT	26,390	1,329	202,369
Family housing (excluding emergency).	32,703,000 square feet	Family	28,394	12,423	201,162

[1] Excludes liquid fuel, ammunition, and cold storage.
[2] Includes operating plants and distribution lines.

Air Force-controlled properties outside the continental United States, on the basis of cost, amounted to $3.4 billion at June 30, 1958, as compared with $2.8 billion at the previous year end. The overseas amount is 36 percent of the worldwide Air Force real property cost. About two-thirds of the Air Force properties outside this country are located in foreign countries; 71 percent of the Department of Defense investment in real property in foreign countries is under Air Force control.

Air Force-controlled properties in many foreign countries represent leases of relatively small acreages. Foreign base rights of varying types in 34 different countries involve 1.6 million acres of land. Virtually all, 97 percent, of the Territories and possessions acreage controlled by Air Force is in Alaska and 96 percent of this has been withdrawn from public domain lands. Airfield pavements constitute the single largest Air Force investment outside continental United States. Troop housing is next in cost.

SECTION B. CONSTRUCTION IN PROGRESS

The cost of work in place, as reported by the military departments, on construction projects which have been started but not completed and transferred to the inventory is shown in table 28. The cost reported represents the cost of labor and materials incorporated on the construction projects. The Federal Government has a property interest in these projects—most of them are being built on Government-owned land.

Against this property interest the military departments have made cash payments in the form of progress payments to the contractors and the unpaid balance due for the work completed by the contractor is carried as accounts payable.

Upon satisfactory completion of the project and acceptance by the military department, the total cost of the completed project is added to the real property inventory account.

The accrued cost of projects underway in the various geographical areas for each of the military departments is shown in table 28.

TABLE 28.—*Cost of work in place on construction in progress by military department and location as of June 30, 1958*

DEPARTMENT OF DEFENSE

[Thousands of dollars]

Location	Department of Defense	Army	Navy (including Marine Corps)	Air Force [1]
Total	2,821,805	473,562	611,125	1,737,118
Continental United States	1,797,619	[2] 340,147	298,408	1,159,064

[1] Includes facilities completed but not yet transferred to real property inventory.
[2] Excludes $1,780 million cost of work in place on civil works projects.
[3] Excludes $7 million cost of work in place on civil works projects.

PART II. MILITARY PERSONAL PROPERTY

SECTION A. INVENTORY OF MILITARY EQUIPMENT AND SUPPLIES IN THE CONSOLIDATED SUPPLY SYSTEMS AND IN STOCK FUNDS

1. General

This section of the report deals with the inventories in the supply systems of the military services. For each of the four military services, dollar data are presented in terms of the major purposes for which the supplies and equipment are held, e. g., peacetime operating stock, mobilization reserve stock, economic retention stock, contingency retention stock and excess stock. The inventories are also subclassified into broad commodity categories representing families of similar kinds of items.

Inventories are accounted for in the supply systems of the military services from the time of acceptance by the service until they have been issued to a using unit. The supply system inventories are those being held in the storage or warehousing facilities of the military service for issue to the consumer. They constitute that segment of the overall materiel supply system which is defined in the Joint Chiefs

of Staff dictionary as the "phase of military supply which extends from receipt of finished supplies by the military services through issue for use or consumption."

The stocks are physically located at depots, posts, camps, stations, and bases in the United States, Territories and possessions, and in foreign countries. They are stored in warehouses, open storage spaces, ammunition dumps, fuel tanks, etc.

Supply items which have been issued to the consuming military units—such as divisions, air-wings and most ships—are not considered as assets of the supply system. These items are in the hands of the ultimate user and as such are carried as station properties or in the individual unit inventories where they remain until consumed, destroyed, captured, lost or otherwise disposed of. Data are presented in part II, section B, of this report on inventories which have been issued from the supply system to the ultimate users. If such an item in a military unit becomes unserviceable, it is normally replaced by a serviceable item from the supply system. The unserviceable item is returned to the supply system where it may be repaired and put back into supply channels or declared excess and disposed of.

A separate table, table 42 in part II, section D, shows the amounts of surplus personal property which have been turned over to property disposal officers and are waiting to be disposed of. This surplus property represents excess transferred from the supply system, which in previous reports was carried in the supply system tables, and transfers from equipment in use and from industrial funds.

Stock funds.—Stock funds do not constitute a separate supply system. They are operational and financial devices employed by the military services principally to facilitate financial control over consumption-type supply items for which there is recurring demand. The stock fund mechanism permits the military services to handle inventories of such continuous demand items on a replacement basis much as private distributors replace stocks depleted by sales with new stocks purchased with the proceeds from such sales. Because of the widespread interest in stock fund operations as a means of improving supply and fiscal management and control of inventories, data representing stock fund inventories for each military service are shown separately in this section. The stock fund inventories are included in the overall totals for the entire supply system of each military service.

Reporting of categories and inventory accounts.—Data representing the dollar value of inventories in the aggregate supply system, both the items which are financed by stock funds and those financed from appropriated funds, are shown for each of the military services in the tables in this section.

Each of these tables show the dollar amount of inventories in each major commodity category (groupings of similar kinds of supplies and equipment) and in each strata (groupings according to the purpose for which the supplies are retained).

During fiscal year 1958 the military services completed the stratification of their inventories. The stratification accounts now in use by the military services are uniform, and are: (1) peacetime operating, (2) mobilization reserve, (3) economic retention, (4) contingency retention, (5) excess stocks, and (6) claimant. In addition, stocks in transit and stocks in hands of contractors are also accounted for

and reported by the Army and Navy. These inventory accounts are defined as follows:

(*a*) Peacetime operating stocks are stocks in depots and posts, camps and stations held for issue to using units to equip and train the planned peacetime United States Forces.

(*b*) Mobilization reserve stocks are stocks held for the account of that portion of the mobilization reserve materiel requirement for which procurement is authorized. They include the prepositioned stocks held in specific locations in condition for immediate shipment or use.

(*c*) Economic retention stocks are stocks in long supply which are being retained to meet future requirements since it is more economical to retain them than it is to dispose and later have to purchase them.

(*d*) Contingency retention stocks are stocks in long supply for which there is no programed requirement but which should be retained for military or defense contingencies. Only military type items—that is, items not ordinarily produced commercially for civilian consumption—may be placed in the contingency retention category.

(*e*) Excess stocks are stocks classified as excess to the needs of a military service but not yet disposed of or, as in the case of the Army, stocks excess to the needs of an Army command but not necessarily excess to the Army supply system. In this year's report, all the stocks that have been determined to be surplus or foreign excess (the designation of surplus stocks in overseas areas) that have been transferred to property disposal officers for sale or other disposition, are shown on table 42 and are no longer included in the supply systems tables.

f. Claimant stocks are stocks on hand in a military service which are being held for another service or Government agency (such as Atomic Energy Commission). Stocks held for Reserve components are not carried in this claimant classification but are combined with those of the military service.

In-transit stocks are those to which title has passed to the military service, which are en route (*a*) from manufacturers or suppliers, but which have not been physically received; (*b*) from continental United States depots to overseas commands or vice versa; (*c*) from continental United States depots to continental United States commands; and (*d*) among continental United States depots, which have not been reported as received by the consignee depots.

2. Department of Defense summary

This section of the report presents detailed dollar inventory summaries, showing categories and stratification accounts for each of the military services. A summary of the aggregate totals in the Department of Defense supply system is shown in table 29.

TABLE 29.—*Supply system inventories, by source of funds and military department, as of June 30, 1958*

DEPARTMENT OF DEFENSE

[Millions of dollars]

Military department	Total	Stock fund inventories	Appropriated fund inventories
Department of Defense, total	$47,652	$8,913	$38,739
Army	20,211	6,067	14,144
Navy	12,979	1,936	[1] 11,043
Marine Corps	1,742	405	1,337
Air Force	12,720	505	12,215

[1] Includes $226 million shipboard supplies and $841 million aircraft spare engines not included in Navy supply system inventory data.

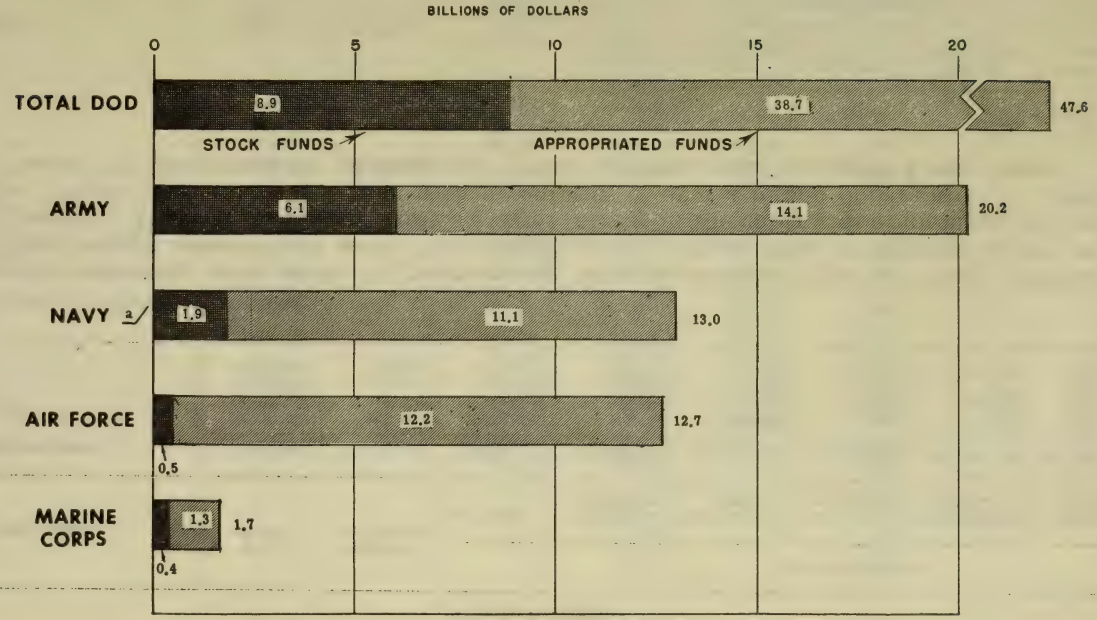

Table 29 shows that Army holds the largest part of the Department of Defense supply system inventories—42.4 percent. Navy and Marine Corps together account for 30.9 percent and Air Force 26.7 percent. Of the stock fund inventories, Army has 68.1 percent, Navy and Marine Corps have 26.2 percent, and Air Force 5.7 percent. Of the appropriated funds inventories, 36.5 percent belong to the Army, 32 percent to the Navy and Marine Corps, and 31.5 percent to the Air Force. These data are also presented graphically in chart 7.

A summary of the stratification of the aggregate totals in the Department of Defense supply system is shown in table 30. As of June 30, 1958, 32.9 percent of the distributed portion of the supply system inventories were classified as peacetime operating; 27.5 percent, mobilization reserve; 15.1 percent, economic and contingency retention; 23.6 percent, excess; and 0.9 percent, claimant stocks. Inasmuch as all four services are now reporting stratification of their inventories on the basis of uniform Department of Defense instructions, this is the first time a DOD consolidated stratification table could be published.

CHART 7

DOD SUPPLY SYSTEM INVENTORIES BY SERVICE

AS OF 30 JUNE 1958

a/ Includes $205 million Shipboard Supplies and $848 million Aircraft Spare Engines not included in chart of Navy Supply System Inventories

TABLE 30.—*Supply system inventories (including stock funds), by inventory strata and military service as of June 30, 1958*

DEPARTMENT OF DEFENSE

[Thousands of dollars]

Military department	Total stocks	Undistributed stocks	Distributed stocks

3. Army supply system inventories

The data in the summary table (table 31) representing Army inventories cover all depot inventories. A brief analysis of the Army supply system data shows that over 66 percent of the total is represented by Ordnance Corps supplies and equipment. Over 30 percent of Army's overall total is in the categories of ammunition, guided missiles, and related parts. Other large categories, each with inventories of over a billion dollars are: (1) Vehicle parts, (2) small arms, (3) tanks, (4) Quartermaster clothing and textile materiel, and (5) Signal Corps items.

Defense supply service	436		436	436					
Stocks in hands of contractors (GFM)	153,980	$153,980							
Stocks in posts, camps, and stations, not under FIA (estimated)	500,000	500,000							
Stocks in transit	125,441	125,441							
Undistributed inventories	142,511	[3] 142,511							

[1] Excludes $1,252,661,000 "Stocks in hands of property disposal officers" included in able 42.

[2] Stock excess to 1 Army command but not necessarily excess to Army supply system.

[3] Not stratified as of June 30, 1958.

Adjusting the total amount reported for the Army's supply system inventories in the last year's report by the amount of stocks in hands of property disposal officers, in order to show the two reports on the same basis, will show that the total supply system inventories decreased $1,197,373 thousand.

Army supply system inventories

[Thousands of dollars]

As reported fiscal year 1957	$21, 899, 445
Fiscal year 1957 adjusted	21, 408, 345
Fiscal year 1958 adjusted	20, 210, 972
Decrease	1, 197, 373

The total reduction in inventories is accounted for by a drawdown of $1.5 billion in stock fund property with an increase of $0.3 billion in appropriated fund inventories.

An analysis of the total reduction of Army-owned inventories in the amount of $1.2 billion during fiscal year 1958, shows the following significant changes in the inventory stratification:

A revised policy on economic retention stock which placed stringent criteria on the retention of this property reduced its value from $4.2 billion to $1.4 billion. Some of these stocks were added to the mobilization reserves; others were determined to be excess under operation elimex (elimination of excess stocks).

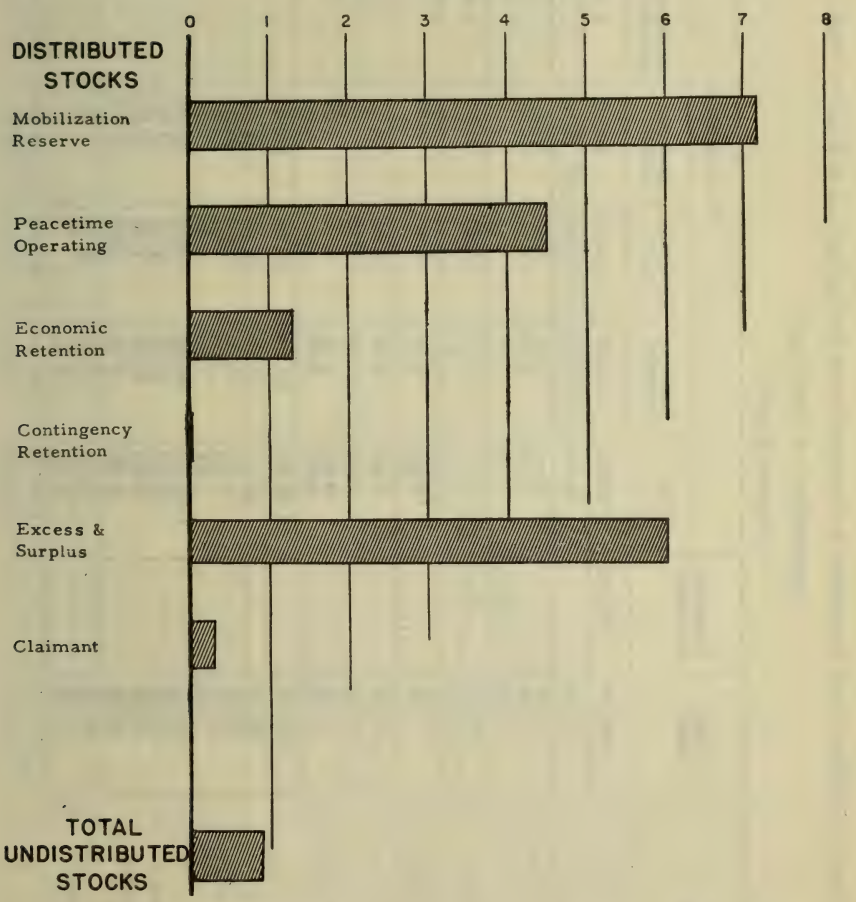

Operation elimex, which has for its goal the elimination of nonessential stock from the Army supply system, has had 2 significant results; it has reduced the peacetime operating stocks by $1.8 billion (from $6.3 to $4.5 billion) and it has contributed to an increase in the excess account of $2.2 billion (from $3.8 to $6.0 billion).

As of June 30, 1958, 23.2 percent of the distributed portion of Army's supply system inventories were classified as peacetime operating; 37.2 percent mobilization reserve; 7.1 percent economic and contingency retention; 31.1 percent excess; and 1.4 percent claimant stocks. Chart 8 shows the Army supply system inventories by these major classifications.

CHART 8

SUPPLY SYSTEM INVENTORIES
(Including Stock Funds)

DEPARTMENT OF THE ARMY
AS OF 30 JUNE 1958
BILLIONS OF DOLLARS

Army stock fund inventories.—Included in the $20.2 billion inventories shown in table 32 are $6.1 billion carried in the Army stock fund. This $6.1 billion of stock fund inventories in the Army represent 30 percent of the total inventories reported by the Army in its supply system.

TABLE 32.—*Stock fund inventories, by inventory strata and category as of June 30, 1958*

Undistributed inventories	142,511	[3] 142,511							

[1] Excludes $382,797,000 "Stocks in hands of property disposal officers" included in table 42.

[2] Stocks excess to 1 stock fund division or a stock fund branch, but not necessarily excess to the Army supply system.

[3] Not stratified as of June 30, 1958.

33294—58——8

About 41 percent of the Army stock fund inventories is in the Quartermaster Corps category. The Ordnance Corps group of categories amounts to $2.3 billion and represents 37.9 percent of the total Army stock fund.

4. Navy supply system inventories (excluding Marine Corps)

For inclusion in this report, Navy's supply system inventories are grouped into 30 major categories. In addition, the inventories are stratified into six accounts, other than undistributed stocks, to indicate the broad retention groups into which the Navy inventories are divided.

A brief review of the data in table 33 indicates that the category of major Ordnance equipment and explosives, totaling $4.8 billion, constitutes the largest single supply category (40.4 percent) of the Navy supply system inventory. The only other category of inventory valued at over a billion dollars is aeronautical material which totals $2.3 billion. These 2 inventory categories together constitute 59.8 percent of the total Navy supply system inventories at June 30, 1958.

Stocks in hands of contractors (GFM)	121,006	121,006							
Stocks in transit	554,553	554,553							
Manufacturing work in process	199	199							

[1] Excludes $225,954,000 "Shipboard supplies" and $840,598,000 "Aircraft spare engines," which are shown in table 29; and $738,434,000 "Stocks in hands of property disposal officers," which is shown in table 42.

Adjusting the total amount reported for the Navy's supply system inventories in last year's report by the amount of stocks in hands of property disposal officers, in order to show the two reports on the same basis, will show that the total supply system inventories decreased $2,027,238,000.

Navy supply system inventories (exclusive of Marine Corps)

[Thousands of dollars]

As reported fiscal year 1957	14, 486, 072
Fiscal year 1957 adjusted	13, 939, 555
Fiscal year 1958 adjusted	11, 912, 317
Decrease	2, 027, 238

The total reduction in inventories is accounted for by a drawdown of $280 million in stock fund property and a drawdown of $1,747 million in appropriated fund inventories.

The total value of Navy's supply system inventory decreased $2 billion from the amount reported a year ago. Peacetime operating stocks increased $495 million during tne year which was the only stock strata in which Navy reported an increase. Mobilization reserve stocks decreased $1.9 billion. Economic and contingency retention stocks decreased $332 million and excess stocks, after eliminating the surplus in hands of property disposal officers, decreased $38 million. Claimant stocks decreased $10 million and the undistributed stocks decreased $244 million. Peacetime operating and mobilization reserve stocks together represent 65.4 percent of the total distributed Navy stocks. Navy supply system inventories are presented graphically in chart 9.

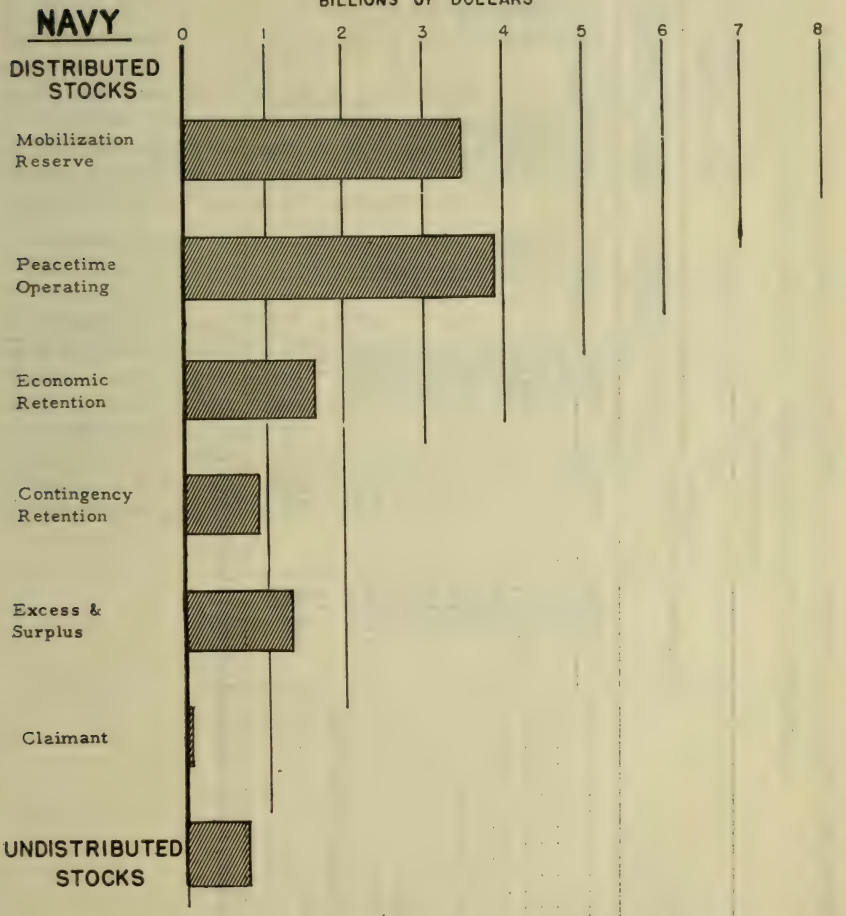

CHART 9

SUPPLY SYSTEM INVENTORIES

(Including Stock Funds)

DEPARTMENT OF THE NAVY

AS OF 30 JUNE 1958

Navy stock fund (exclusive of Marine Corps).—Table 34 shows the category and stratification classification of the Navy (exclusive of the Marine Corps) stock fund. The Navy stock fund carried 16.3 percent of the total inventories in the Navy supply system.

Manufacturing work in process	199	199						

[1] Excludes $229,850,000 "Stocks in hands of property disposal officers" included in table 42.

All materials procured and or stored in the Navy supply system for issue for maintenance and operating purposes are authorized to be carried in the Navy stock fund. Normally, this includes all consumable types of material and relatively minor items of equipment, including parts and components, used in the manufacture, assembly, maintenance or rebuild of end items for the military supply system.

Transfer of residual inventories of Navy stock fund type material from the appropriated fund inventories to stock funds continued during fiscal year 1958. The drawdown of long supply inventories in the stock fund more than offset any capitalization gains as a result of the transfers and accounted for the inventory reduction. The emphasis and acceleration of the inventory disposal program also contributed to the inventory reductions. Continued decapitalization of stocks in the special clothing and textiles and resale clothing and accessories categories which were transferred to the Army Quartermaster (single manager), also had an appreciable effect on the inventory reduction of these two categories.

5. Marine Corps supply system inventories

The Marine Corps supply system inventories are grouped in table 35, into 11 major categories. Total value of the Marine Corps inventory increased $59.7 million or 3.4 percent during the fiscal year. This increase is wholly attributable to increased capitalization in the Marine Corps stock fund. The total value of the Marine Corps stock fund inventory increased $82.7 million during the fiscal year while the appropriated fund inventories decreased $23 million. Peacetime operating and mobilization reserve stocks together represent 72.8 percent of the total distributed Marine Corps stocks. Inventories are presented graphically in chart 10.

Stocks in transit	29,492	29,492	----------	----------	----------	----------	----------

Approximately 44.3 percent of the Marine Corps stock fund inventories is in the ordnance, tank, automotive stocks category.

6. Air Force supply system inventories

The Air Force supply system inventory, including the Air Force stock fund, is presented in 23 categories, or materiel groupings, in table 37. During fiscal year 1958 the Air Force stratified its inventories, in accordance with DOD Instruction 4140.9, to reflect the purpose for which the inventories are held. Any comparison of the amounts in these materiel groupings with those shown in last year's report would not be meaningful due to the stratification reclassification.

Training equipment	33,400		33,400	16,200		7,900		9,300	
Support equipment and supplies	280,700		280,700	129,300	3,600	46,600	14,900	86,300	
Base maintenance equipment	127,300		127,300	48,500	12,500	26,500		39,800	
Stock fund	504,968	[2] 44,375	460,593	188,680	212,350	38,708		20,855	
Specific project materiel	224,600	224,600							
Local purchase materiel	115,519	115,519							
Miscellaneous materiel (under $10 unit cost)	189,125	189,125							
Other claimant stocks	63,700		63,700						63,700
Spare engines	2,875,100	[2] 239,205	2,635,895	2,004,095		242,400		389,400	
Stocks in transit [3]									
Stocks in hands of contractors (GFM) [3]									

[1] Excludes $1,102,245,000 "Stocks in hands of property disposal officers" which have been inclded in table 42.

[2] Includes $43,055,000 of stock fund items (see table 38) and $239,205,000 of spare engines in transit.

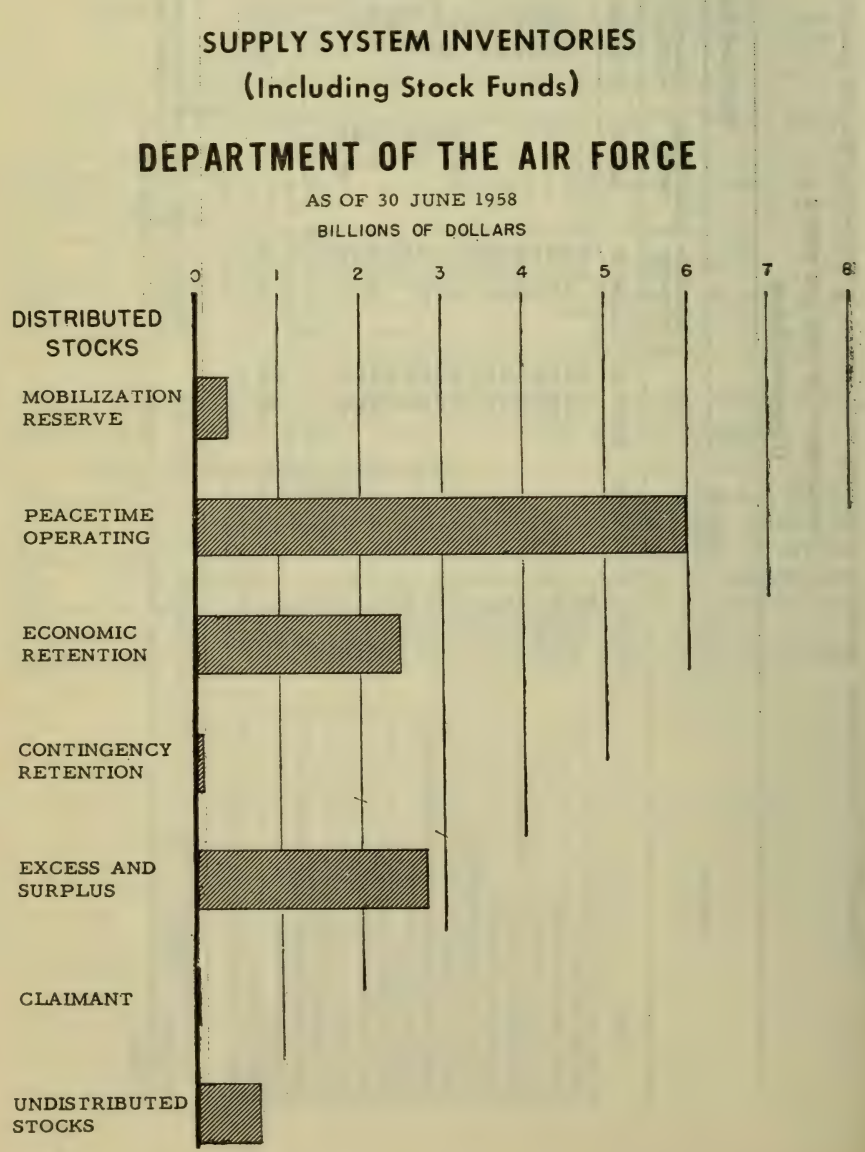

[3] Stocks in transit, other than those of spare engine and stock fund, and stocks in hands of contractors (GFM) are not available from the Air Force inventory accounting system or supply management reports.

As of June 30, 1958, 50.3 percent of the distributed portion of the Air Force supply system inventories was classified as peacetime operating; 3.7 percent, mobilization reserve; 21.8 percent, economic and contingency retention; 23.7 percent, excess; and 0.5 percent, claimant stocks.

An analysis of the Air Force supply system data in table 37 shows that about 22.6 percent of the total inventory is in the category of spare engines. Other large categories, each with inventories of over a billion dollars are: (1) Airframe components, (2) powerplant components, and (3) weapons-ammunition-propellent components.

Chart 11 shows the Air Force supply system inventories by these major classifications.

CHART 11

Air Force stock fund.—Table 38 shows the category and stratification classification of the Air Force stock fund. The Air Force stock fund represents about 4 percent of the total inventories in the Air Force supply system.

TABLE 38.—*Stock fund inventories, by inventory strata and category, as of June 30, 1958*

DEPARTMENT OF THE AIR FORCE

[Thousands of dollars]

Division	Total stocks	Undistributed stocks[1]	Distributed stocks				
			Total	Peacetime operating	Mobilization reserve	Economic retention	Excess stocks
Air Force stock fund, total	$504,968	$44,375	$460,593	$188,680	$212,350	$38,708	$20,855
Air Academy	120		120	120			
Aviation fuels	241,892		241,892	67,485	174,407		
Clothing	50,061		50,061	15,194	11,583	15,184	[2] 8,100
Commissary	53,201		53,201	47,993	5,208		
General supplies	88,156		88,156	54,038	1,200	21,918	11,000
Medical-dental	27,163		27,163	3,850	19,952	1,606	1,755
Stocks in hands of contractors (GFM)	1,320	1,320					
Stocks in transit	43,055	43,055					

[1] Considered operating stocks by Air Force with the exception of medical-dental where the bulk of in-transit stocks are considered mobilization reserve stocks.

[2] Includes $4,000,000 to be transferred to single manager, clothing and textile materiel, Quartermaster Division, Army stock fund, Department of the Army.

The largest division of the Air Force stock fund is the Aviation Fuels Division which represents 47.9 percent of the total Air Force stock fund. Approximately 87.1 percent of the distributed portion of the Air Force stock fund was classified as peacetime operating and mobilization reserve stocks; 8.4 percent, economic retention stocks; and 4.5 percent, excess stocks.

SECTION B. MILITARY AND GENERAL EQUIPMENT ISSUED FOR USE (INCLUDING PRODUCTION EQUIPMENT)

1. General

Quantitative records are maintained by the military departments of equipment taken from the supply system and issued to units for use. Except for major classes of equipment such as aircraft and ships, however, data are not available by specific categories for such stock or equipment in the possession of using units or troops. The monetary accounting reports of both Navy and Air Force normally show a total value only for such stocks. Army does not include its issued stocks and equipment in its monetary accounting system but it does use a periodic statistical report of the quantities of the major items to develop estimates of monetary values.

2. Office of the Secretary of Defense

Within the Office of the Secretary of Defense, major items of equipment in use as of June 30, 1958, represented a cost of $2 million. Office equipment and furniture accounts for 98 percent of this total.

3. Army, major military and general equipment in use

Army estimates that the value of major items of equipment in possession of Army troops and National Guard units was $6 billion as of June 30, 1958. This equipment consists of combat and support materiel such as artillery, small arms, chemical weapons, tanks, other combat vehicles, tactical and support vehicles, Army aircraft, guided missiles and other major equipment.

4. Navy, military and general equipment in use

The acquisition cost of Navy's equipment in use is estimated at $30.5 billion as of June 30, 1958. Of this total, $21.8 billion represents the cost of 2,571 ships, both active and inactive.

Service craft, such as utility land craft, minesweeping boats, open lighters, floating derricks and harbor tugs totaled 1,972 as of June 30, 1958. These were valued at approximately $1 billion.

Navy program aircraft totaled 11,924 as of June 30, 1958, which includes operating aircraft 8,424, logistical support aircraft 2,109 and reserve stocks of 1,391. These aircraft are reported as costing $5.9 billion. Items of equipment other than production equipment, in use at shore installations on the report date, had an acquisition cost of $1.8 billion.

5. Air Force, military and general equipment in use

The June 30, 1958, figure representing Air Force cost of equipment in use was $25.6 billion. Its 25,164 aircraft are reported as costing $21.5 billion with all other in-use equipment valued at $4.1 billion. The aircraft total includes 2,433 in the custody of the Air National Guard, and 659 in the custody of the Air Force Reserve. The aircraft are valued at standard prices reflecting an average cost for each type of aircraft regardless of the contractor or fiscal year procurement, without reflecting engineering changes and modification costs subsequent to approval of the basic contract. There has been a small reduction in the number of aircraft during the fiscal year but the monetary value is $2.2 billion more than that reported a year ago. This increase is due mainly to the larger proportion of new jet powered aircraft owned by the Air Force.

6. Inventory of production equipment

The acquisition cost of production equipment under Department of Defense control as of June 30, 1958, was reported as $5.5 billion, a slight increase (4 percent) from that on hand 1 year earlier. Production equipment includes metalworking machinery and other allied industrial equipment such as metal heat-treating furnaces, transformers, hardness testing machines, balancing machines, etc.

Metalworking equipment located within the continental United States and controlled by the Department of Defense had an acquisition cost of $2.9 billion on June 30, 1958 (see table 39). This was a decrease of $30 million from the amount reported 1 year earlier. Decreases reported by Army and Air Force were partly offset by a small increase in the Navy total. The cost of the various individual types of metalworking equipment is shown in table 40.

TABLE 39.—*Production equipment inventory by type and military department as of June 30, 1958*

DEPARTMENT OF DEFENSE

[Thousands of dollars]

Military department	Total	Metalworking	Other
Department of Defense	5,508,696	2,966,425	2,542,271
Army	2,781,975	968,785	1,813,190
Navy	1,295,581	[1] 929,953	365,628
Air Force	1,431,140	1,067,687	363,453

[1] Includes $92,503,000 for cost of installing machine tools and $16,899,000 for cost of machine tools located outside continental United States.

TABLE 40.—*Metalworking equipment costing $500 or more each in continental United States, by military department and production equipment codes as of June 30, 1958*

DEPARTMENT OF DEFENSE

[Thousands of dollars]

Production equipment codes	Department of Defense	Army	Navy (including Marine Corps)	Air Force
Total, metalworking equipment	2,857,023	968,785	820,551	1,067,687
Metal cutting tools	2,385,114	816,549	697,435	871,130
3411 Boring	316,121	40,056	117,634	158,431
3412 Broaching	38,698	9,946	5,777	22,975
3413 Drilling	203,529	108,939	42,457	52,133
3414 Gear cutting	96,844	27,801	32,530	36,513
3415 Grinding	392,447	139,565	94,341	158,541
3416 Lathes	600,301	240,161	196,936	163,204
3417 Milling	497,232	145,252	134,618	217,362
3418 Planer	38,923	1,808	29,131	7,984
3419 Miscellaneous	201,019	103,021	44,011	53,987
Metal forming tools	471,909	152,236	123,116	196,557
3441 Bending	47,306	11,126	18,820	17,360
3442 Hydraulic press	199,967	36,735	59,913	103,319
3443 Mechanical press	126,131	70,332	17,522	38,277
3444 Manual press	5,327	4,434	503	390
3445 Punching	26,734	7,820	14,268	4,646
3446 Forging	34,977	4,093	6,599	24,285
3447 Wire strip	5,797	4,919	661	217
3448 Riveting	14,048	4,020	3,357	6,671
3449 Miscellaneous	11,622	8,757	1,473	1,392

The total number of metalworking equipment items in the Department of Defense on June 30, 1958, was 245,900. About 3,500 of these machine tools are in Navy use in overseas areas. Other items of production equipment controlled by the military departments totaled 272,800. Of this latter equipment, about 5,500 items are located outside continental United States.

In addition to the 87,800 machine tools, the Army reports that it has 172,800 other items of production equipment in use and in reserve which are used in the manufacture of various military end items and components. This production equipment, other than metalworking, had an acquisition cost of $1,813 million. All of the Army production equipment is within continental United States.

Included in the Navy production equipment totals (apart from any production equipment in the supply system data) are 81,500 machine

tools and 69,000 other items of production equipment such as railroad transportation, electrical distribution, materials handling, and construction and excavating equipment. The 69,000 items of production equipment other than metalworking had an acquisition cost of $366 million.

In addition to the 76,600 machine tools, totaling slightly over $1 billion, the Air Force had 31,000 other production equipment items such as airfield maintenance, materials handling, and excavating equipment. These latter items cost at acquisition $190 million. The Air Force also reports 36,500 items of capital plant equipment with an acquisition cost of $173 million. None of the above are included in the Air Force supply system data.

SECTION C. INVENTORIES HELD IN INDUSTRIAL FUNDS

Working capital funds are authorized by section 405 of title IV of the National Security Act, as amended. The use of industrial funds permits the financing of industrial or commercial type activities and the development of production costs to be used as a basis for charging the appropriations of customers for the products or services furnished to them by the activity financed by the fund.

As of June 30, 1958, 55 activities in the Department of Defense were operated under industrial fund charters. The Army had 25; the Navy 55 (including 27 separate printing activities); the Air Force 2 (1 of which is a printing activity located in 8 different plants and 1 a laundry and dry-cleaning activity operated at 50 installations). The total inventories, consisting of raw materials, supplies, and work in process, held in all industrial funds in the Department of Defense amounted to $352 million on June 30, 1958.

The industrial fund inventories for each group of activities within each Department are shown in table 41.

TABLE 41.—*Industrial fund inventories as of June 30, 1958*

DEPARTMENT OF DEFENSE

[Thousands of dollars]

Military department and type of industrial activity	Total inventories	Materials and supplies	Work in process
Department of Defense, total	352, 427	126, 203	226, 224
Army, total	92, 372	25, 205	67, 167
Arsenals and armories	64, 787	17, 116	47, 671
Quartermaster depot manufacturing and maintenance	5, 073	2, 228	2, 845
Research activities	10, 336	3, 838	6, 498
Printing and pictorial activities	2. 956	528	2, 428
Transportation terminal	9, 220	1, 495	7. 725
Navy, total	259. 163	100, 239	158, 924
Shipyards	146, 576	62, 375	84, 201
Ordnance plants	77, 785	9, 639	68, 146
Printing plants	1, 169	972	197
Laboratories	7, 569	1, 494	6, 075
Marine clothing and equipment factory	652	347	305
Military Sea Transportation Service	24, 996	24, 996	----------
Base activities	416	416	----------
Air Force, total	892	759	133
Printing plants	679	546	133
Laundry and dry-cleaning plants	213	213	----------

SECTION D. SURPLUS PERSONAL PROPERTY IN HANDS OF PROPERTY-DISPOSAL OFFICERS

As of June 30, 1958, the value of the worldwide surplus and foreign excess property inventory of the Department of Defense amounted to $4,175 million, of which $3,564 million, or 85.4 percent, was in continental United States and $611 million, or 14.6 percent, was overseas or foreign excess (table 42).

TABLE 42.—*Surplus and foreign excess property inventories held by property-disposal officers as of June 30, 1958*

DEPARTMENT OF DEFENSE

[Thousands of dollars]

	Total inventories	Continental United States	Foreign countries
Department of Defense, total	4,175,446	3,563,971	611,475
Army	1,199,802	831,983	367,819
Navy (including Marine Corps)	1,873,399	1,850,102	23,297
Air Force	1,102,245	881,886	220,359

Of the total amount of surplus and foreign excess property inventories held by property disposal officers the Army reported $1,200 million or 28.7 percent; Navy (including Marine Corps) $1,873 million or 44.9 percent; Air Force $1,102 million or 26.4 percent.

The Army reported that 69.3 percent of their total surplus and foreign excess inventories held by property disposal officers was in continental United States while 30.7 percent was in foreign countries. The Navy surplus and foreign excess inventories held by property disposal officers were reported as 98.8 percent in the continental United States and only 1.2 percent in foreign countries. Air Force reports that 80 percent of their surplus and foreign excess inventories was located within the continental United States and 20 percent located in foreign countries.

SECTION E. NATIONAL INDUSTRIAL RESERVE

1. General

Public Law 883, 80th Congress, the National Industrial Reserve Act of 1948, provides for establishing—

> adequate measures whereby an essential nucleus of Government-owned industrial plants and a national reserve of machine tools and industrial manufacturing equipment may be assured for immediate use to supply the needs of the Armed Forces in time of national emergency or in anticipation thereof.

The properties still owned by the Government are managed by the General Services Administration (as successor to the Federal Works Agency) under general policies established by the Secretary of Defense. Since the Department of Defense has a contingent claim and production priority rights in all the national industrial reserve plants including those which GSA has disposed of with a national security clause and those plants leased, or in GSA custody, data on these are

included in this section of this report. However, none of the properties in this reserve has been included in the totals for real property (pt. I) or metalworking equipment (pt. II, sec. B) of this report because they are held by GSA.

2. Plant reserves

The national industrial plant reserve contained 83 facilities as of June 30, 1958. The sponsoring military department and status of these plants on that date were:

Sponsor	Total	Sold with recapture clause	Lease or contract	Inactive
Total	83	68	13	2
Army	12	10	2	
Navy	23	21	2	
Air Force	48	37	9	2

In keeping with Department of Defense policy to release as many reserve plants as possible to private corporations, 68 of the 83 plants have been sold subject to appropriate restrictions and recapture clauses, 13 are being operated under lease or contract agreement, and the remaining 2 plants in the reserve are being maintained at Government expense by the General Services Administration.

The net residual acquisition cost (original cost of construction and acquisition of entire plant less portions previously disposed of) of the 83 plants now in the reserve was $1.03 billion. This cost is made up of $902 million for the 68 plants which have been sold to private interests and $124 million for the 15 plants still in custody of the Government.

The status of the 83 plants by category of product is shown in table 43. Of the 15 plants still owned by the Government, 8 produce basic raw materials or products in the magnesium, iron and steel, and miscellaneous metal fields, and 7 are producing military end items and components in the aircraft and tank automotive fields. The 2 idle plants in the reserve consist of 2 magnesium facilities sponsored by the Air Force.

TABLE 43.—*National industrial reserve plants, by status and category of product, as of June 30, 1958*

Category of product	Total	Sold (with recapture clause)	Lease or contract	Inactive
All plants	83	68	13	2
Aircraft and components	23	18	5	
Aluminum	13	13		
Basic products, miscellaneous	2	2		
Explosives and ammunition loading	5	5		
Guns and ammunition	2	1	1	
Iron and steel	13	12	1	
Machine tools	1	1		
Magnesium	7	2	3	2
Metals, miscellaneous	3	1	2	
Shipbuilding and components	8	8		
Tank and automotive	3	2	1	
Miscellaneous (including 2 pipeline facilities)	3	3		

3. Equipment reserve

The total number of items of production equipment in the national industrial equipment reserve on June 30, 1958, was 4,990 as compared with 4,648 1 year ago. The original acquisition cost of these items was $16.4 million.

Of the total of 4,990 items in the reserve, 2,395 are carried in the central inventory of the production equipment redistribution group, available for lease to overcome production shortages of qualified contractors engaged in defense-supporting production. The remaining 2,595 equipment items are held in reserve for additional defense support and essential civilian production in the event of mobilization.

Part III. Progress in Recording and Reporting Properties

Section A. Office of the Secretary of Defense Published Directives and Instructions and Current Projects Pertaining to Property Accounting and Reporting

A digest of the principal regulations, directives, and instructions which provide for the recording or reporting of inventory data which have been issued by the Office of the Secretary of Defense since the enactment of title IV of the National Security Act and were in effect as of June 30, 1958, is presented in this part of the report. These current directives and instructions, in some instances, supersede or revise earlier directives and instructions on the subject of property accounting and reporting.

1. Regulation covering the operation of working capital funds for industrial and commercial-type establishments (industrial funds), issued July 13, 1950, as amended September 7, 1950

These regulations provide for the establishment of three industrial funds—one in each military department. They also establish the policy for the initial transfer of funds, inventories, and properties to the industrial funds; the handling of work orders and reimbursements for such work; provision for accounting and cost accounting systems; authorization to incur obligations and expend funds; budgetary control; reporting on operations; and auditing.

2. Military assistance program supply performance report (DOD Instruction 2110.27), issued June 10, 1958

This instruction prescribes procedures for the direction and preparation of summary quantitative data which will serve as the basis for official reports of the DOD under the military assistance program. The reports will make available comprehensive summaries of the military assistance program to the Department of Defense, the Congress and other Federal agencies.

3. Aircraft inventory record series (DOD Instruction 3232.3); issued March 23, 1956

This instruction establishes a uniform aircraft inventory record series within the Department of Defense in order to ensure that an accurate accountability and inventory record control of components installed in aircraft may be maintained. This requirement is applicable to all aircraft including those subject to interdepartment transfer, maintenance cross-servicing, and utilization by National Guard units, Reserve training units and the mutual defense assistance program.

4. Summary reports of dollar value of deliveries by procurement (claimant) program (DOD Instruction 4000.3), issued November 12, 1954

This instruction establishes reports of the dollar value of supplies and equipment delivered to the military departments and military construction put in place. The reports also show the dollar value of scheduled or established future deliveries and construction by procurement (claimant) program. This instruction provides a comprehensive measure of progress and trends in military deliveries and construction to be used as a basis for measuring impacts on the national economy and for forecasting materials, manpower, or other requirements of military programs for planning use by DOD and other Government agencies.

5. Basic regulations for the military supply system (DOD Directive 4000.8), reissued January 5, 1957

These basic regulations set forth important objectives in the field of supply which are to be implemented by the military departments and redefine the relationships between the basic regulations and other Department of Defense directives regulating supply management. They specifically require that "all supply accounting at depot, post, camp, station, base, and installation level will be developed to achieve integration and uniformity on a quantitative and monetary basis, except for supplies and property with troop units and afloat, where periodic quantitative inventories only will be required, and that prescribed stock levels shall be uniform among military departments where similar conditions exist."

6. Inventory of commercial and industrial type manufacturing facilities (DOD Instruction 4100.19), issued February 3, 1955

This instruction provides for the taking of an inventory by the military departments of commercial and industrial type manufacturing facilities, which are owned and operated by the Department of Defense and which produce products for its use.

7. Individual procurement action report (DOD Instruction 4105.44), reissued May 20, 1958, with subsequent amendments

This instruction prescribes the use of a uniform format for reporting all procurement actions of $10,000 or more entered into by the military departments. This format is designed to provide essential procurement records and statistics through a single uniform reporting program as a basis for required recurring and special reports. It also provides the military departments with a wide variety of significant data for procurement policy and management control purposes.

8. Monthly procurement summary by purchasing office (DOD Instruction 4105.51), issued May 20, 1958

This instruction provides a form for the use by purchasing offices of the military departments to report procurement actions of less than $10,000 on a uniform basis.

9. Inventory management policies (DOD Directive 4140.1), issued October 12, 1956, and subsequent amendments, and a series of DOD instructions: (a) Management of mobilization reserve stocks (instruction 4140.2), issued July 28, 1954, and subsequent amendments; (b) management of materiel in long supply (instruction 4140.3), issued January 11, 1956, and subsequent amendment revising the issue of August 19, 1954; (c) management of materiel pipeline, including levels of supply (instruction 4140.4), issued September 3, 1954; (d) acquisition of materiel from GSA stores depots (directive 4140.5), issued April 15, 1955, and subsequent amendment; (e) interservice supply support (directive 4140.6), issued July 5, 1955; (f) control, supply and positioning of materiel (instruction 4140.7), issued July 20, 1955, and subsequent amendment; and (g) inventory management report for materiel in the military supply systems (instruction 4140.9), issued April 27, 1956, and subsequent amendments

Directive 4140.1 establishes the Department of Defense basic policy for the management of materiel inventories and uniform definitions. It calls for a physical inventory of materiel and reconciliation of records at least once a year, and requires that each item of materiel, both for military or industrial use within a military service, shall be under the cognizance of only one inventory control point. These supply and inventory control points are required to maintain records, make reports, channel the transportation of materiel in the most economical manner, review the inventory status in relation to current and future requirements, determine and declare Service-wide excess stocks, and schedule rebuilding of economically repairable stocks. Instruction 4140.2 establishes the policies regarding the retention, storage, care, and preservation of mobilization reserve stocks and their stock record accounting, reporting, and control. Instruction 4140.3 establishes policies, criteria, and procedures requiring the optimum use of materiel in long supply within the Department of Defense. Instruction 4140.4 prescribes definitions to be used for identifying the levels of supply in the materiel pipeline. Directive 4140.5 prescribes the policies and procedures governing Department of Defense acquisition of materiel from GSA. Directive 4140.6 sets policies, criteria, and procedures to facilitate optimum interservice use of available materiel within the Department of Defense. Instruction 4140.7 provides procedures, criteria, and guidance governing the control, supply, and positioning of materiel within Defense. Instruction 4140.9 prescribes semiannual and annual reporting as to the status, condition, purposes, and activity of the materiel inventories of the military departments.

10. Materials handling equipment utilization and allowance (DOD Instruction 4145.11) issued August 29, 1955, and revised December 2, 1957

This instruction (*a*) establishes uniform criteria for determining quantitative requirements and allowances for the principal items of materials handling equipment, (*b*) provides a means for determining the quantities of such equipment required by an installation and (*c*) prescribes reports and data pertinent to the effective application of criteria and analyses of equipment utilization.

11. Policy and procedures relating to nonexcess personal property to be sold or exchanged for replacement purposes (DOD Instruction 4160.1), issued July 14, 1955

This instruction establishes Department of Defense policy relating to the exchange or sale of personal property for replacement purposes where the proceeds of the sale are applied to acquire similar items. It also prescribes policy and procedures affecting the utilization screening of such property before sale or exchange.

12. Policy and procedures governing reporting and screening of excess personal property under control of DOD (DOD Instruction 4160.9), issued June 24, 1955 and subsequent amendments

This instruction establishes departmentwide policy and procedures for reporting personal property under Department of Defense control, which is excess to the needs of the organization holding such property. It routes notifications of excess personal property so that all elements of the Department of Defense may be informed of its existence and character. Provision is made for notifying all other elements of the Federal Government of excesses remaining after Department of Defense needs are met. Finally, the instruction provides for disposal of such excesses which are not absorbed by the Federal Government.

13. Reporting requirements for excess, surplus, and foreign excess personal property (DOD Instruction 4160.12), issued July 3, 1956, and subsequent amendments

This instruction establishes basic requirements for a Department of Defense reporting system for excess, surplus, and foreign excess personal property.

14. DOD facility classes and construction categories (DOD Instruction 4165.3), issued March 11, 1955, and subsequent amendments

This instruction provides a standard numerical code for the identification and classification of facility classes and construction categories to permit uniform identification and classification of real property in planning, programing, budgeting, accounting and reporting; exclusive of the civil works activities of the Army Corps of Engineers, or emergency construction in direct support of combat operations for any of the military departments.

15. Real property: Acquisition, management and disposal (DOD Directive 4165.6), issued September 15, 1955; program for management of real property maintenance activities (DOD Instruction 4165.9), issued June 23, 1955

Directive 4165.6 states the Department of Defense policy relative to the acquisition, management and disposal of real property and delegates the authority to accomplish these actions within each of the military departments to the respective Secretary. Instruction 4165.9 outlines a program for uniformly effective management of real property maintenance activities.

16. Inventory of military real property (DOD Instruction 4165.14) reissued February 20, 1958

This instruction provides a uniform procedure to be followed by the military departments for the establishment and maintenance of a worldwide inventory of real property (land and improvements) and

for the preparation of an abridged inventory in summary form. Specific instructions are contained in this instruction as to the categories, physical units of measure, the data, maps, and descriptive information which are to be kept on the records in the military departments and those that are to be summarized and reported to the Office of the Secretary of Defense. The military departments are required to keep their records current at all times and to submit summary reports annually.

17. Retention of real property (DOD Directive 4165.20), issued August 27, 1955, and subsequent amendments

This Directive establishes Department of Defense policy governing the retention of real property by the military departments, establishes criteria by which such property will be retained or reported excess and provides for a review of real property holdings within the military departments.

18. Preparation of materiel planning study, DD Form 764 (DOD Directive 4200.1), issued April 9, 1954, and subsequent amendments

This directive provides for a uniform presentation of demand and supply data from which the Office of the Secretary of Defense and the military departments can discharge their responsibilities in the field of requirements and supply management. Worldwide assets on hand and their general location are shown. The directive is recordkeeping in nature and studies of major items currently being procured are requested by separate memorandums as required—usually semiannually. A list of items was developed for which a materiel planning study was requested from the military departments. This original list of items has been revised periodically for the purpose of adding or deleting items as they increase or decrease in importance.

19. Production-delivery status and progress reporting between military departments (DOD Instruction 4200.4), issued October 11, 1955, and materiel program control—principal items (DOD Instruction 4200.6), issued December 14, 1955, and subsequent amendments

Instruction 4200.4 establishes a requirement for, and a method to accomplish, the exchange of information between two or more of the military departments relative to production-delivery status and progress reporting in connection with basic items procured or produced by one military department for another as the result of a single procurement assignment agreement. Instruction 4200.6 establishes the criteria for determining end items of major importance and provides for the accumulation of data, the regular publication of studies and the interchange of information between the military departments relative to those major items.

20. Recording and utilization of idle production equipment (DOD Directive 4215.9), issued August 7, 1957, and subsequent amendment

This directive prescribes the policies and procedures for reporting and redistributing idle machine tools and certain other related production equipment owned or controlled by the Department of Defense.

21. Inventory of machine tools and other production equipment (DOD Directive 4215.12), issued April 25, 1957.

This directive provides for the preparation and maintenance of adequate inventory records of Department of Defense owned machine tools and other production equipment in the departmental industrial equipment reserves and for obtaining semiannual summary inventory reports.

22. Petroleum products status and program report (DOD Instruction 4220.1), issued January 20, 1956, and subsequent amendment

This instruction provides for quarterly reports from the military departments showing the procurement program and deliveries, consumption, sales, issues, inventories and analyses of the reported data for selected petroleum products along with dollar values for the procurement program and deliveries.

23. Preparation of materiel planning study, aircraft engines (DOD Instruction 4230.2), issued September 7, 1955

This instruction establishes (*a*) a uniform system for recording requirements and supply data for aircraft engines and (*b*) a basis for the periodic review of current and future engine programs and a comparison of those programs to mobilization capabilities.

24. Military public works basic recordkeeping requirements (DOD Instruction 4270.3), issued October 13, 1955

This instruction provides for the maintaining of basic records, relative to military public works construction activities, at the headquarters of each of the military departments, from which summary data may be extracted as required.

25. DOD motor vehicle uniform reporting system (DOD Instruction 4500.7), reissued June 26, 1957

This instruction establishes standard terminology, definitions and reporting of motor vehicle inventories. The system provides data on utilization, operating and maintenance costs.

26. Responsibility for application of automatic data processing systems to business procedures (DOD Directive 5105.11), issued January 2, 1957

This directive defines the responsibility of the military departments and the Office of the Secretary of Defense in the application of automatic data processing systems (ADPS) to business procedures; such as inventory accounting, etc.

27. Policies for implementation of single manager assignments (DOD Directive 5160.12), issued January 31, 1956, and a series of DOD directives: (a) Single manager assignment for airlift service (DOD Directive 5160.2), issued December 7, 1956, and subsequent amendment; (b) single manager service assignment for ocean transportation (DOD Directive 5160.10), issued May 28, 1956, and subsequent amendments; (c) single manager assignment for subsistence (DOD Directive 5160.11), issued May 3, 1956, and subsequent amendment; (d) single manager service assignment for traffic management within the United States (DOD Directive 5160.14), issued May 1, 1956, and subsequent amendments; (e) single manager assignment for clothing—textiles (DOD Directive 5160.15), issued May 4, 1956, and subsequent amendments; (f) single manager assignment for medical materiel (DOD Directive 5160.16), issued May 4, 1956; (g) single manager assignment for petroleum (DOD Directive 5160.18), issued July 24, 1956, and subsequent amendments.

Directive 5160.12 establishes the basic pattern of organization and procedures for single manager assignments for common use items or common service activities, identifying the primary objective of the single manager assignments as being the elimination of duplication and overlapping of effort between and among the military departments and the improvement of effectiveness and economy in supply and service operations throughout the Department of Defense. Directive 5160.2 creates a single manager assignment for airlift service, designating the Secretary of the Air Force as the single manager. Directive 5160.10 creates a single manager service assignment for ocean transportation designating the Secretary of the Navy as the single manager. Directive 5160.11 creates a single manager for subsistence designating the Secretary of the Army as the single manager. Directive 5160.14 creates a single manager service assignment for traffic management within the United States, designating the Secretary of the Army as the single manager. Directive 5160.15 creates a single manager assignment for clothing-textiles, designating the Secretary of the Army as the single manager. Directive 5160.16 creates a single manager assignment for medical materiel, designating the Secretary of the Navy as the single manager. Directive 5160.18 creates a single manager assignment for petroleum, designating the Secretary of the Navy as the single manager.

28. Accounting and reporting on disposition of proceeds from sale of scrap, salvage or surplus military supplies, equipment and material, including foreign excess personal property (DOD Instruction 7310.1), issued July 24, 1957

This instruction sets forth the policies with respect to accounting and reporting on disposition of proceeds from sale of scrap, salvage, or surplus materials, including foreign excess personal property of the Department of Defense, except (*a*) proceeds from sale of such material held by working capital funds of the military departments (these are handled in accordance with regulations governing stock fund and industrial fund operations), and (*b*) proceeds from sale of such material held for the material assistance program.

29. Regulations governing stock fund operations (DOD Directive 7420.1), reissued December 19, 1956: (a) Authorized donations of surplus materiel from working-capital funds to health, education, and welfare (instruction 7420.3), issued June 9, 1955, and subsequent amendments; (b) constructive methods of billing for stock fund sales (instruction 7420.4), issued July 2, 1957; (c) principles to be observed determining materiel to be included in stock funds (instruction 7420.5), issued November 26, 1956

Directive 7420.1 provides for establishment of a stock fund in each of the four services setting up procedures for the issuance of charters; initial transfer of funds, inventories, and other assets, pricing policy, management policy, sales of stocks, accounting, authority to obligate and expend funds, budgetary control, reporting, and auditing. Instruction 7420.3 provides for establishment of accounts in each industrial fund and departmental stock fund and division thereof to reflect the authorized donations of surplus materiel to Health, Education, and Welfare. Instruction 7420.4 provides for the establishment of sales and accounts receivable at the time delivery of goods to a common carrier is made. Instruction 7420.5 clarifies the criteria for inclusion and exclusion of materiel for stock fund financing.

30. Financial reports for Department of Defense stock funds (DOD Instruction 7420.6), issued June 10, 1957

This instruction provides the financial reports and budget forms to meet requirements of the Office of the Secretary of Defense in overall financial review, for use in the preparation of reports to the Congress and other Government agencies, and in financial control actions under the budget process.

31. Reimbursement by single manager stock fund divisions for retail inventory losses (DOD Instruction 7420.7), issued January 7, 1958

This Instruction prescribes uniform procedures for reimbursement by single manager stock fund divisions to the retail stock fund divisions of the military services for net inventory losses of the corresponding retail category or division of assigned material estimated to be recovered in surcharges established by the single manager.

32. Uniform pricing policy for materials, supplies and equipment financed by military appropriated funds (DOD Directive 7510.1), issued December 31, 1956

This Directive provides the basic policies and criteria pertaining to pricing materials, supplies, and equipment in the supply distribution system other than those inventories financed under working capital funds.

33. Use of source documents and source records in quantitative and financial inventory accounting (DOD Instruction 7510.2), issued July 2, 1957

This instruction defines the type of basic source documents and source records to be used in the military departments to insure that the inventory accounting and reporting systems provide for the accumulation of both quantitative and financial data from original transaction documents and stock records.

SECTION B. DEPARTMENT OF THE ARMY

As of June 30, 1958, the number of line items in the Army supply system totaled 962,000, an increase of approximately 5,000 over the number as of September 30, 1957. This increase is due, in part, to the input of guided missile and Army aircraft parts. The Army is continuing its efforts to keep the number of line items in the supply system at the minimum level required to perform its mission. This is being accomplished through standardization and item reduction programs.

During fiscal year 1958 the Department of the Army continued its program of reducing the number of different line items in the Army supply system by reviewing individual stock record cards, maintained at inventory control points, and eliminating the cards for all items no longer in the supply system. A reduction was made in the number of conventional items. However, the addition of many new items required for new and complex equipment more than offset this reduction.

Progress has been made in the utilization of the Federal supply classification system by assigning to a particular Army technical service the logistic responsibility for the classified item. For each item in the Army supply system converted to Federal supply classifications, the inventory control, procurement, depot storage, and issue has been made the responsibility of a single technical service.

The Army aviation depot plan provided for the transfer of Army-equity repair parts from Air Force depots to Army depots during fiscal years 1957, 1958, and 1959. The original plan called for transfers of stocks from Air Force to Army in the amount of $51 million which was subsequently revised to $61 million. Receipts from procurement and other sources in Air Force depots on behalf of the Army increased this amount to $79.4 million. As of June 30, 1958, all but $1.6 million of the Army-equity repair stocks had been transferred, virtually completing the plan in 2 years instead of 3.

About a year ago the Army developed a 3-year plan to exploit the potential of automatic data processing and high-speed communications equipment to improve its performance of logistics functions. As of June 30, 1958, this equipment has been installed at 10 national inventory control points and 6 depots.

The following accomplishments have been made by the Quartermaster General of the Army who is the single manager for clothing and textile material and subsistence during this fiscal year:

1. Completed the stratification of combined inventories.
2. Procurement and contracting activities for clothing and equipage have been centralized at the Military Clothing and Textile Supply Agency, Philadelphia, and two other inventory control points located at Atlanta and Utah General Depots.
3. Government-furnished property bailment bond procedures have been implemented.
4. Continued attrition of depot stocks from storage locations not included in the permanent distribution plan. A reduction from 80 to 13 locations of such stocks is planned for fiscal year 1959.
5. Increased utilization of annual option-type contracts.
6. Utilization of a contract administration check list to monitor procurement progress.

7. Extension of the cost accounting system to cover machine tools.

The following improvements in the Army real property inventory system are planned for fiscal year 1959:

1. Nomenclature of facilities will be standardized in the basic inventory maintained at the Department of Army level.

2. Real property records at installations currently maintained on 5 different inventory records according to classification of facility, i.e., buildings, utilities, surfaced areas, land and miscellaneous, will be reduced to 2 inventory records, i.e., land and all other.

3. Real property transactions will be reported by facilities to Department of the Army level as transactions occur which will permit the maintenance of a current inventory.

4. All real property transactions which initiate or effect accountability will be documented on a single form replacing a variety of forms presently used.

5. Real property transactions by Corps of Engineers will be prepared in a manner to permit mechanical processing at Department of the Army level without manual recording at command level. It is planned to extend this method, to the maximum extent feasible, to installations for reporting real property transactions accomplished by the installations.

SECTION C. DEPARTMENT OF THE NAVY

Several inventory management policies have been developed by the Navy during the fiscal year ended June 30, 1958. Some of these policies were—

1. Transfer of inventory management responsibilities of technical bureaus to supply-demand control points. This will permit the technical bureaus to concentrate on important technical and engineering tasks properly considered their primary mission and the supply-demand control points to manage all of the inventories.

2. Clarification of bureau responsibilities in order to furnish adequate program support data and technical data to supply-demand control points that have been assigned program support responsibilities.

3. Realinement of inventory management of shore-based ground electronics equipment under a single inventory manager rather than have the manager of each program which utilizes electronic equipment responsible for separate stocks of shore-based ground electronics equipment. A similar type action was completed for integrating the management and control of navy-wide automotive and materials handling equipment under the Bureau of Yards and Docks.

The number of items of supply which have been identified and cataloged under the Defense cataloging program were approximately 1,400,000 as of June 30, 1958. This represents a slight increase (approximately 125,000 items) during the fiscal year. The Navy has implemented an accelerated item reduction program (AIR) for the purpose of reducing the range of items to an absolute minimum within a 3½-year period. The Navy has continued its program of converting the Navy cataloging system to the Federal catalog program as prescribed by Public Law 436, 82d Congress. During fiscal

year 1958 approximately 273,400 Navy and Marine Corps supply items were converted to the Federal catalog program.

To insure that the quality of supply support to the aviation segment of the Navy supply system was adequate and compatible with the generation of high-performance aircraft and missiles, the Navy established a special board of qualified officers and civilians to review the adequacy of supply support currently being rendered. This board noted several areas in which it was believed supply support could be improved. Approximately 43 specific recommendations made by the board are currently being implemented which should improve aviation supply support for the Navy aviation program.

During fiscal year 1958 the Navy disposed of excess and surplus property valued at $1.8 billion. Because of rapidly developing new weapons systems, it is believed that additional large quantities of existing inventories will soon become obsolete. The Navy is currently alining its material requirements with its program requirements and identifying and removing from the supply system all material not specifically required to meet the Navy program. It is estimated that approximately $2 billion of excess material will be removed from the Navy supply system during fiscal year 1959.

During fiscal year 1958 the Navy and Marine Corps achieved some significant advances in the standardization program. The Bureau of Supplies and Accounts reported a reduction of approximately 91,000 items from the Navy supply system. The Bureau of Ships adopted a new standard for calibration of propulsion shafts, which resulted in substantial savings. The Bureau of Ordnance developed a design screening system to eliminate unnecessary drawings for standard parts, restrict the use of nonstandard parts, and facilitate the selection of standard test and checkout equipment. This system prevented the introduction of 10,695 new items into the supply system. The Bureau of Yards and Docks revised the standards for replacement of dry-charged lead-acid storage batteries and modified the procurement specifications for electrolyte to permit bulk supply in lieu of individual containers.

The Navy's electronic data processing program is expected to improve the effectiveness of the Shore Establishment in its support of the operating forces. With its unique capabilities for processing essential data at electronic speeds and producing timely and valuable integrated information to guide management decisions, the electronic computer appears to have the potential of enabling great strides in the pursuit of this objective. The Navy continued its efforts in laying the groundwork for capitalizing on this potential by installing additional computers, developing systems for future installations, and familiarizing line management with the concept and possibilities of this equipment. Notable progress was made in—

(*a*) The installation of five additional computers at supply activities as part of the program to improve stock requirement determinations within shorter processing cycles and improve service to the fleet.

(*b*) The installation of three additional computers at shipyards to improve data processing primarily in the areas of inventory control and finance. A concentrated effort will be made at the Mare Island Shipyard to design a system for production planning and control processes.

(*c*) Development of an inventory management system by the Marine Corps which is expected to be operational by the fall of 1959.

SECTION D. DEPARTMENT OF THE AIR FORCE

During fiscal year 1958 the Air Force developed and implemented a worldwide logistics improvement program based primarily upon single point requisitioning for weapons system support and direct supply from prime depots in the United States to overseas units. This program reduces the support required through intermediate, large-scale, industrial-type depots in overseas areas in favor of a support channel running directly from the source in the continental United States to overseas users.

The program is designed to provide the logistics system with flexibility, a more rapid response to user demands, and the ability to shift emphasis of support from one geographic area to another as required.

Within the continental United States, the Air Force logistics structure is being reorganized by closing 5 Air Force depots and 9 storage sites. This program has become feasible due to procedures developed and proven which include the use of electronic data processing computers and much faster transportation.

The use of electronic processing equipment has improved the control of major commodities, such as engines. The Air Force owns approximately 100,000 aircraft engines with an inventory value of about $4.5 billion. These engines are controlled by serial number from the time they are procured until the time of disposal. All functions relating to the management of engines are presently being integrated and as the system becomes completely operational over the next 2 fiscal years, further savings in the procurement areas, with no impairment of combat support is anticipated.

During fiscal year 1958, the Air Force improved the inventory management procedures of the Aviation Fuels Division, Air Force stock fund. The most important improvement was made in the area of in-transit inventories primarily in overseas areas. In-transit stock previously had been overstated in reports due to the fact that the inventory accounting system picked up in-transit stocks upon receipt of a loading report. Since categories are discharged at many locations worldwide, discharge reports were not always received on a timely basis. As a result, in-transit inventories were usually inflated.

Actions taken during fiscal year 1958 to improve worldwide inventory management of aviation fuel are a result of continuous study and analysis of the fuel supply system. The changes in the system which resulted in a firmer control of Air Force fuel made possible a reduction in the inventory of over 4 million barrels of aviation gasoline.

Significant steps are being taken in the Air Force program of selective management of materiel. A system recently instituted at Air Force depots, has enabled inventory managers to maintain a firm control over stocks of high value (known as Hi-Value items). This system provides the depots a continuous historical record of the movement of each such item within the supply system.

PART IV

WORLDWIDE RECAPITULATION OF U. S. GOVERNMENT REALTY AS OF JUNE 30, 1958

TABLES OF RECONCILIATION BETWEEN DEPARTMENT OF DEFENSE AND GENERAL SERVICES ADMINISTRATION REALTY ACREAGE AND COST DATA AS OF JUNE 30, 1958

Worldwide Recapitulation of U. S. Government Realty as of June 30, 1958

Type	Cost (in thousands of dollars)		
	In the United States	Outside United States	Total worldwide
Federally owned real property included in overall report:			
Civilian executive agencies, offices and establishments	$13,480,667	$1,373,429	$14,854,096
Department of Defense:			
Civil functions, Corps of Engineers	3,904,000	7,000	3,911,000
Military functions:			
Department of the Army	7,637,000	1,178,000	8,815,000
Department of the Navy (including the Marine Corps)	6,973,000	1,579,000	8,552,000
Department of the Air Force	6,099,000	3,425,000	9,524,000
Properties managed by the Architect of the Capitol	[1] 345,110		[1] 345,110
Public domain realty, exclusive of buildings, structures and facilities, civilian and military	[1] 8,987,144	[1] 521,466	[1] 9,508,610
Mineral resources, civilian and military	[1] 4,871,110	[1] 42,000	[1] 4,913,110
Subtotal	52,297,031	8,125,895	60,422,926
Investments in related areas, not included in overall report:			
Civilian agencies:			
Construction in progress			1,384,757
Leasehold improvements			97,507
Real-estate collateral acquired			193,080
Military functions: Construction in progress, cost of work in place:			
Corps of Engineers, civil functions	1,787,000		1,787,000
Department of the Army	340,000	134,000	474,000
Department of the Navy (including the Marine Corps)	298,000	313,000	611,000
Department of the Air Force	1,159,000	578,000	1,737,000
Total investment in related areas	3,584,000	1,025,000	[2] 6,284,344
Total, worldwide, U. S. Government realty			66,707,270

[1] Estimated current present-day evaluations.

[2] All assets herein reported are shown in gross amounts with no deductions for allowances for losses and depreciation. Only wholly Government owned corporation assets and other wholly owned assets are included. Assets held under trust arrangements and interagency assets, including public debt securities owned are excluded. The assets are in the main, valued at acquisition cost (known or estimated).

PART V

REALTY INVENTORY OF (1) EXECUTIVE AGENCIES, OFFICES, AND ESTABLISHMENTS OF THE UNITED STATES GOVERNMENT; (2) DEPARTMENT OF DEFENSE; AND (3) ARCHITECT OF THE CAPITOL, LOCATED IN CONTINENTAL UNITED STATES AS OF JUNE 30, 1958

Realty Inventory—Executive Agencies, Offices, and Establishments of the United States Government, Including the Department of Defense, in Continental United States, as of June 30, 1958

[Cost in thousands of dollars]

Civilian executive agencies, offices, and establishments	13, 480, 667
Department of Defense: [1]	
Civil functions, Corps of Engineers	3, 904, 000
Department of the Army	7, 637, 000
Department of the Navy (including Marine Corps)	6, 973, 000
Department of the Air Force	6, 099, 000
Total	38, 093, 667

[1] Includes original cost of all property owned and/or controlled by the Department of Defense. These figures include leasehold improvements, easements, and permits as noted on DOD–GSA cost reconciliation table.

GENERAL SERVICES ADMINISTRATION,
Washington, D. C., December 11, 1958.

Hon. WILLIAM L. DAWSON,
Chairman, House Committee on Government Operations,
House of Representatives, Washington 25, D. C.

DEAR MR. CHAIRMAN: We are pleased to submit the enclosed summary tabulations of the real property owned by the Federal Government throughout the world. They were compiled from the detailed inventory reports submitted to the General Services Administration by the various real property holding agencies. A statement on the authority and scope of the inventory is also enclosed.

As of June 30, 1958, the Federal Government owned real property throughout the world with an acquisition cost of $45.6 billion. Properties costing $38.0 billion or 83.3 percent are located in the United States, while those properties located overseas cost $7.6 billion or 16.7 percent of the total.

The full real property inventory report, together with supporting detailed inventory listings, will be forwarded to you as soon as completed.

Sincerely yours,

EDWARD K. MILLS, Jr.,
Acting Administrator.

INVENTORY OF REAL PROPERTY OWNED BY THE UNITED STATES THROUGHOUT THE WORLD AS OF JUNE 30, 1958

AUTHORITY

An inventory of real property owned by the United States throughout the world, as of June 30, 1958, is being compiled by the General Services Administration pursuant to the request of the chairman of the House Committee on Government Operations in a letter dated March 14, 1958.

A similar request for such an inventory was made by the Senate Committee on Appropriations.

SCOPE

This inventory includes all real properties owned by the United States Government throughout the world. It is based on detailed inventory reports submitted by the participating agencies as prescribed by General Services Administration Circular No. 80 (Revised), dated June 6, 1958.

In the case of properties outside the United States, those located in United States Territories and possessions are shown separately from those located in foreign countries. The Department of Defense (military functions) furnished only summary figures with regard to total acreage and total cost for its real properties located outside the United States.

It does not include any lands owned by the sovereign governments of the various United States Territories and possessions. Neither does this inventory cover any lands which are administered by the United States under trusteeship by authority of the United Nations.

The inventory includes real property declared to be excess to the needs of the holding agency or surplus to the needs of the United States Government. Data with respect to buildings, structures, and other facilities in process of construction are included in this inventory only if they were available for use as of June 30, 1958.

The inventory excludes residential and farm properties acquired by the Federal Government through foreclosure incident to a lending operation or other Federal

aid project. It also excludes property owned by the District of Columbia government.

The inventory excludes machinery, processing equipment, demountable and movable structures, and furniture and special use items, which were not considered part of the realty reported.

Properties managed by the Architect of the Capitol and those held in trust by the United States Government are not included in the summary tabulations.

Cost figures shown are the actual acquisition costs, where available, and estimated costs (as of date of acquisition) where actual costs are not available. Costs include all capital improvements and such items as plumbing, elevators, heating and lighting fixtures, air-conditioning systems, etc., which are normally required for the functional use of a building. In addition, costs also include such items as safes, vaults, etc., which are built into the structure or are permanently affixed thereto.

No costs have been included in this inventory for (1) unreserved public domain; (2) public domain reserved for national parks, national forests, military installations, and other purposes; and (3) historical sites where such sites have been acquired by methods other than by purchase. However, the acreage for such lands is included in the inventory.

GENERAL SERVICES ADMINISTRATION,
Washington, D. C., June 6, 1958.

GENERAL SERVICES ADMINISTRATION CIRCULAR NO. 80, REVISION NO. 3

To: Heads of Federal Agencies
Subject: Annual Reports on Federal Real Property Holdings

1. General

This circular prescribes annual reports necessary for the maintenance and publication of an inventory of Federal real property holdings covering real property owned by and leased to the United States Government as of June 30

each year. It also prescribes forms with detailed instructions for the preparation and submission of these inventory reports to the General Services Administration.

2. Authority

The inventory reports are prescribed pursuant to the authority contained in the Federal Property and Administrative Services Act of 1949 (63 Stat. 377), as amended.

The inventory of Federal real property was initiated and is being continued at the request of the Senate Committee on Appropriations.

The House Committee on Government Operations has also requested data on all federally owned real property for inclusion in its real and personal property inventory reports.

3. Purpose

The real property inventory provides a centralized source of information covering all Federal real property throughout the world. Some of the principal purposes to be served by the real property inventory are as follows:

(*a*) To achieve the most effective and economical governmentwide utilization of available property.

(*b*) To facilitate disposal of surplus property.

(*c*) To provide a basis for the intelligent evaluation and appraisal of budgetary requirements.

(*d*) To establish a ready reference for answering inquiries from the Congress; the press; trade associations; educational institutions; Federal, State and local government agencies; and the general public.

4. Reporting agency

Reports on federally owned real property shall be submitted by the agency responsible for the maintenance of real property records as prescribed in GAO Accounting Systems Memorandum No. 32, i. e., the agency which has control of and the authority to assign and reassign the use of property or any portion thereof.

The agency which currently administers the lease and makes rental payments to the lessor will be responsible for reporting leased property, regardless of which agency executed the original lease or is currently using the property.

5. Coverage

The inventories prescribed by this circular shall cover land, buildings, and other structures and facilities throughout the world which are owned by or leased to the United States Government, or wholly owned Federal Government corporations.

(*a*) *Owned property.*—The annual reports of real property owned by the United States Government shall include (1) unreserved public domain; (2) public domain reserved for national forests, national parks, military installations or other purposes; (3) property in which the United States Government has a life interest; and (4) property acquired by purchase, construction, donation, and other methods of acquisition. They shall also include all buildings or structures owned by the Federal Government, whether or not located on Government-owned land. Separate annual reports shall also be submitted for real properties held in trust by the Federal Government.

For purposes of this inventory, buildings being acquired under the "public buildings purchase contract program" or "lease-purchase agreements," Public Law 519, 83d Congress, as amended, shall be treated as "owned" property.

Items to be excluded from the annual reports are (1) properties acquired through foreclosure, confiscation, or seizure to be liquidated in settlement of a claim or debt to the Federal Government; (2) rights-of-way and easements granted to the United States Government; (3) machinery and processing equipment which are not part of the realty; (4) sovereign-owned land of the governments of the various United States Territories and possessions; and (5) lands administered by the United States under trusteeship by authority of the United Nations.

(*b*) *Leased property.*—The annual report of real property leased to the United States Government shall include all property leased from private individuals, organizations, and municipal, county, State, and foreign governments, as evidenced by a written agreement involving a monetary consideration and a landlord-tenant relationship. It shall also include right of use and occupancy obtained under eminent domain proceedings or equivalent procedures.

Items to be excluded from the annual reports are (1) real property occupied under permit or other arrangements with other Federal Government agencies or wholly owned Federal Government corporations; (2) leasehold improvements

(but Government-owned buildings or structures located on leased land shall be reported as federally owned); (3) rights-of-way and easements; and (4) real property leased rent free or for nominal rent, unless the property is significant.

Examples of properties to be excluded are (1) building space and/or land made available to the Federal Government, rent free, or for nominal payment, such as rooms in courthouses, county buildings, universities, and (2) land upon which the Government has been granted an easement, right-of-way, or permit to place power transmission lines, gaging stations, fire lookout towers, and revetments. Determination as to whether the item is significent and is rent free or for nominal rental is the responsibility of the reporting agency. 35 Comp. Gen. 713 is suggested as a guide to help resolve questions pertaining to the definition of "nominal payment."

6. Reports to be submitted

(*a*) *Inventory of real property owned by the United States Government.*—Each agency shall prepare, in accordance with the instructions in attachment 1a and submit to the General Services Administration, a separate report on GSA Form 1166: Annual Report of Real Property Owned by United States Government (attachment 1), for (1) each newly acquired installation; (2) each installation with increases or decreases of $1,000 or more affecting any line item or the total for the installation, or any change in acreage, irrespective of costs, which have occurred since the submission of the previous report; (3) each installation which has been declared excess, in whole or in part; and (4) each installation for which a revision of an entry on the previous report is required.

In the case of changes under "(2)" and "(4)" above, an adjusted report shall be submitted covering the entire installation. This adjusted report shall be a complete restatement giving effect to all installation changes such as acquisitions, dispositions, construction, and corrections of errors or omissions in the previous report.

Each agency shall also prepare and submit to the General Services Administration, for each bureau or other major organizational unit, a report on GSA Form 1209: Summary of Number of Installations Owned by United States Government (attachment 2), regardless of whether or not changes have occurred since the previous report. Separate reports on GSA Form 1209 shall be submitted for properties (1) in the United States, and (2) outside the United States.

The annual inventory reports (GSA Forms 1166 and 1209) shall be submitted as of June 30 each year. An original and one copy of these reports shall be submitted to the General Services Administration, Office of the Comptroller, Washington 25, D. C., not later than September 1 of each year.

Whenever possible, data reported shall be based on detailed real property records and related documents in the reporting agency's files. When such records or documents are not available, estimated data, so identified, may be used. However, as soon as practicable, detailed real property records (and related documents) shall be established and maintained on a current basis by the reporting agencies.

(*b*) *Inventory of real property leased to the United States Government.*—Each agency shall prepare and submit to the General Services Administration a report of its leased real property holdings as of June 30 each year on GSA Form 1166A: Annual Report of Real Property Leased to United States Government (attachment 3), in accordance with the instructions in attachment 3a.

Each agency shall also prepare and submit to the General Services Administration, for each bureau or other major organizational unit, a report on GSA Form 1209A: Comparative Summary of Properties Leased to United States Government (attachment 4). Separate reports on GSA Form 1209A shall be submitted for properties (1) in the United States, and (2) outside the United States. Instructions for the preparation of this form are set forth in attachment 4a.

An original and one copy of each report shall be submitted annually to the General Services Administration, Office of the Comptroller, Washington 25, D. C., not later than October 1 of each year.

(*c*) *Optional reporting method.*—Agencies which have electrical accounting machine equipment may make arrangements with the General Services Administration, Office of the Comptroller, to furnish detailed machine listings, together with the supporting punchcards, in lieu of GSA Forms 1166, 1209, 1166A, and 1209A.

7. Supplies of forms.

GSA Forms 1166, 1209, 1166A, and 1209A may be obtained from the General Services Administration, Printing and Publications Branch, Seventh and D Streets SW., Washington 25, D. C., telephone: Republic 7–7500 (Government dial code 181), extension 6453.

8. Agency liaison

Each reporting agency shall designate an official to serve as agency representative on this real property inventory. The same representative may be designated, if desired, for the United States Government-owned and the leased real property inventories. The General Services Administration, Office of the Comptroller, Washington 25, D. C., shall be advised in writing of the names of all such representatives or any changes in such designation.

9. Inquiries

For additional information regarding the content of this circular, or any questions or problems relating thereto, agency representatives may communicate with the General Services Administration, Office of the Comptroller, Washington 25, D. C., telephone: Executive 3–4900 (Government dial code 183), extension 4131.

INSTRUCTIONS FOR THE PREPARATION OF GSA FORM 1166: ANNUAL REPORT OF REAL PROPERTY OWNED BY UNITED STATES GOVERNMENT

1. General instructions

(a) *Preparation of reports.*—GSA Form 1166: Annual Report of Real Property Owned by United States Government, shall be prepared each year, as of June 30. A complete report covering the entire installation shall be submitted for—

(1) Each newly acquired real property installation.

(2) Each transfer of an installation from another Federal agency which is not merged with an existing installation.

(3) Each installation previously reported having an increase or decrease of $1,000 or more, affecting any line item or total cost for the installation; or for a change in acreage, irrespective of cost. A report shall also be submitted for significant changes in the number of buildings, floor area, method of acquisition, and usage categories.

In the case of item (3) above, the adjusted report shall be a complete restatement, giving effect to all realty changes involving the installation, such as, acquisitions, dispositions, new construction, and correction of errors or omissions in the previous report.

A report requiring no entries for Blocks 11 through 25 on GSA Form 1166, shall be submitted for—

(1) Disposition of a complete installation.

(2) Transfer of a complete installation to another Federal agency.

(3) An installation declared excess or surplus, in whole or in part (see (*c*) below).

(4) Revision of the name of an installation or of the date of acquisition of land and/or buildings.

An appropriate notation regarding the above transactions or revisions shall be made in block 26, "Remarks."

Reports shall not be submitted for installations having no changes since submission of the previous reports.

(*b*) *Reporting agency.*—Reports on federally owned real property shall be submitted by the agency responsible for the maintenance of real property records as prescribed in GAO Accounting Systems Memorandum No. 32, i. e., the agency which has control of and the authority to assign and reassign the use of property or any portion thereof. For purposes of this inventory, the above rule shall apply regardless of the manner of acquisition or which agency is now using the property. Examples of a reporting agency follow:

(1) For an office building or warehouse occupied by a Federal agency or agencies, upon determination by GSA, and for which GSA is responsible for elevator and guard service and for cleaning and maintenance, GSA is the reporting agency.

(2) In case of special purpose buildings, such as Coast Guard stations, military reservations, hospitals, and prisons, those agencies or bureaus thereof having control of building management and operations, including authority to assign or reassign space in such buildings, will be considered as the reporting agencies.

(*c*) *Excess and surplus real properties.*—GSA Real Property Management Regulations, title 2, require that each holding agency having control of excess and surplus real property shall retain accountability therefor until official written notice is received of the transfer or sale of such property. For purposes of this inventory, the holding agency of excess or surplus property shall report the various transactions and changes thereto in accordance with the instructions for reporting real property as set forth in this circular.

In reporting excess and surplus property or changes thereto, reference shall be furnished in block 26, "Remarks," to the GSA number assigned to SF 118: Report of Excess Real Property. (See GSA Reg. 2–IV–201.00.)

(*d*) *Installation.*—An installation, such as a national forest or park, military reservation or hydroelectric project, shall be considered as an individual reporting entity and shall be the subject of a single report, except for those installations located in more than one State. In the case of an installation located in more than one State, the portion located in each State shall be made the subject of a separate report, and thus shall be treated as a separate installation for purposes of this inventory. Each such report shall include all land, buildings, and other structures and facilities of an installation within a State.

In other cases, where a building and the site thereof, such as an office building, courthouse, post office, or warehouse, are all that comprise an installation, the property shall be considered as an individual reporting entity and shall be the subject of a single report. This same procedure shall be followed in the case of individual areas of improved or unimproved land.

(*e*) *Construction in process.*—Buildings, structures, and other facilities in process of construction shall be reported only if "available for service" as of the reporting date. However, sites acquired for such purposes, or for new projects, shall be reported regardless of whether or not the buildings, structures, or facilities are available for service. The usage classification of such sites shall be based on the intended use of the construction, whether or not in process.

(*f*) *Temporary buildings.*—A temporary building (not demountable) on a concrete foundation shall be reported. However, temporary buildings set up expressly for construction purposes shall not be reported.

(*g*) *Public buildings purchase contract program—Lease-purchase agreements.*—Buildings being acquired under Public Law 519, 83d Congress, as amended, shall be reported upon completion of construction and the execution of the purchase contract or lease-purchase agreement with the financing contractor.

(*h*) *Fixtures and equipment.*—For purposes of this report, the cost of buildings, structures, and other facilities shall also include the cost of such fixtures and equipment as are normally required for the functional use of the facility. For example, include plumbing, heating, and lighting fixtures, elevators, air-conditioning systems, as well as items such as safes and vaults, which are built into the structure or are permanently affixed thereto, the removal of which would materially damage the structure. However, the cost of all machinery and processing equipment, as well as furniture, laboratory equipment, and special use items which are not part of the realty, shall be excluded.

(*i*) *Easements and leasehold improvements.*—The cost of easements and rights-of-way, as well as improvements to land, buildings, or structures and facilities occupied by the Government as lessee, shall be excluded. However, the cost of federally owned buildings and/or structures and facilities located on leased land shall be included.

(*j*) *Utility systems.*—Where federally owned utility systems, such as gas, water, electric (power and light), sewer, etc., serve a single building, which is reported separately, the cost of such utility systems shall be included in the cost of the building. Where these systems (including water treatment, sewage-disposal plant, etc.) serve several buildings and structures, their cost shall be reported under other structures and facilities.

2. Specific instructions for preparation of GSA Form 1166

(*a*) *Date, agency, and property identification.*

Block 1. Enter the effective date of the report.

Block 2. *Agency control No.*—For identification purposes, each reporting agency may assign an agency control number to each installation for which a separate report is submitted.

Block 3. *GSA control No.* —The GSA control number consists of two parts, separated by a dash. The first part, comprised of 4 digits, is the agency bureau code, while the second part, comprised of 5 digits, is the installation number. These control numbers are assigned by GSA.

If the report is for an installation previously reported, the reporting agency shall fill in the "GSA Control Number" for that installation, using the same control number shown on the GSA machine listing of installations as of the latest inventory furnished to each reporting agency by the General Services Administration. Use all nine digits, e. g., 1413–07984; not 1413–7984. It is essential that this GSA control number be filled in by the reporting agency so that the current report can be identified with the corresponding report previously submitted.

When an installation is reported for the first time, this block shall *not* be filled in by the reporting agency.

Block 4. *Name of installation.*—Enter the name assigned to the installation being reported such as United States customshouse, Fort Bragg, and Rock Island Arsenal. In case an installation is located in more than one State, a separate report is required to cover the portion of the installation located in each State.

Abbreviate the name of the property, when necessary so that it will not exceed, 23 letters (count each space between numbers or words as a letter). For example, "Yellowstone National Park," which has 25 letters, should be abbreviated to "Yellowstone Nat Park".

Block 5. *Reporting agency.*—Enter the name of the reporting agency; that is, the department, commission, administration, or authority. For example: Department of Commerce, Atomic Energy Commission, Veterans' Administration or Tennessee Valley Authority.

Block 6.—*Bureau or other major organization.*—Enter the name of the reporting bureau or comparable major organizational unit within the reporting agency. For example: National Bureau of Standards.

(*b*) *Location.*

Block 7.—*State or country.*—Enter the name of the State, United States Territory or possession, or foreign country in which the real property is located. When an installation is located in more than one State, a separate report shall be submitted to cover the portion of the installation located in each State.

Block 8.—*City or town.*—Enter the name of the city or town in which or near which the property is located, provided the nearby city is located in the same State and county (blocks 7 and 9). Otherwise, do not fill in this block.

Block 9.—*County.*—Enter the county, counties, parish, or parishes in which the property is located. (Separate reports for each county are not required). If space is insufficient, complete the list under "Remarks," block 26, or on the reverse of the form.

Block 10.—*Street address.*—Enter the street address, rural free delivery, route number, or other local designation.

Geographical code.—Enter the appropriate numerical code for the location of the installation as shown in blocks 7, 8, and 9 in the following sequence: State or continent (2 digits), city (4 digits), county or country (3 digits). (Example: Cape Canaveral, Brevard County, Fla., will be shown as 09–0453–009.)

Codes may be obtained from the publication, "Geographical Location Codes," issued by the Office of the Comptroller, General Services Administration. (See GSA Circular No. 146, dated November 4, 1957.) It may also be found in the latest GSA detailed inventory tabulation furnished to each reporting agency. Do not fill in this space if the geographical location code is not known.

When the location of the installation cannot be identified with any city (block 8), the code under "City" shall be reported as 9999. When the installation is located in more than one county (block 9), the code under "County" shall be reported as 999.

(*c*) *Land.*—Include all land areas or sites owned by the Government as of the reporting date. In the case of an installation comprised of both Government-owned and trust lands, separate reports on GSA Form 1166 shall be prepared for each.

Block 11. *Usage code and classification.*—Enter in this block the present predominant use and related code (see below) of the land area or site being reported. Sites acquired for new projects or on which construction is in process shall be classified for its eventual use. A breakdown of secondary usages is not required. If there are significant secondary usages, mention thereof should be made under "Remarks."

Enter one of the following usage codes and classifications in blocks 11 (A) and 11 (B), respectively, as appropriate:

Code	*Classification*	*Code*	*Classification*
01	Agricultural	16	Reclamation and irrigation
04	Grazing	18	Flood control and navigation
07	Forest and wildlife	19	Vacant
08	Parks and historic sites	20	Institutional
10	Office building locations	30	Housing
11	Military (except airfields)	40	Storage
12	Airfields	50	Industrial
13	Harbor and port terminals	80	Other land
15	Power development and distribution	99	Trust land

The above usage codes and classifications shall be used exclusively by all agencies for purposes of reporting land on GSA Form 1166.

If the report covers only Government-owned buildings and/or structures and facilities, but the land is (1) leased, (2) held under permit, or (3) jointly held and another agency is reporting such land, so state in this block. Give additional details in block 26, if necessary. However, no entries shall be made in blocks 12–16 when land is held under these conditions.

Block 12. *Acquisition code.*—Enter the code number for each method of acquisition of the land being reported. The codes to be entered in this block are as follows:

Code No.	*Method of acquisition*
1	Public domain (applicable only for installations in United States and Alaska).
2	Purchase, donation, exchange, etc.
3	Life interest (applicable only for installations in the Canal Zone and foreign countries).

Include under code 1 all public-domain lands including those withdrawn from public domain. Include under code 2 any land acquired by purchase, donation, exchange, and other methods of acquisition (other than public domain and life interest.) Include under code 3 all real property in which the United States Government has a life interest, such as those acquired by treaty or long-term lease, (e. g., 99 years, in perpetuity) and which the reporting agency, as a matter of policy, considers as the equivalent to ownership by the United States.

Block 13. *Date(s) acquired.*—Enter the year in which the land was originally acquired by the Federal Government for each method of acquisition set forth in block 12. For public domain land withdrawals, show the date of the Executive order or the public land order as the date of acquisition. If various portions were acquired at different dates, indicate the range of dates thereof, such as "1910–21."

Blocks 14 and 15. *Area, urban and rural.*—Entries shall be made to the *nearest 10th of an acre.* If acreage to be reported is a whole figure, enter "0" to the right of the decimal, e. g., 10.0.

Urban.—For purposes of this report, land shall be classified as urban when (1) located in an incorporated place of 2,500 or more, (2) in a densely settled unincorporated place of 2,500 or more, or (3) in a densely settled urban fringe area around cities of 50,000 or more. (Reference: United States summary and maps in vol. I of the 1950 Population Census which lists urban places in each State.)

Enter in this block the area of urban land, to the nearest 10th of an acre, acquired by each method of acquisition reported in block 12.

Rural.—Classify as rural all properties not classified as urban. Enter in this block the area of rural land, to the nearest 10th of an acre, for each method of acquisition reported in block 12.

Block 16. *Cost.*—Enter the cost of land to the Federal Government, *rounded to the nearest thousand dollars,* for each entry in block 12, except for (1) properties held in trust, (2) unreserved public domain, (3) public domain reserved for national forests, national parks, military installations, or other purposes, and (4) land acquired for historical sites other than by purchase.

Costs need not be reported for acquired lands which are intermingled with public-domain lands and which constitute a relatively minor portion thereof.

The cost of sites for monuments, memorials, and statues shall be reported, except for sites of the types described in the two preceding paragraphs.

The cost of items incidental to the acquisition or preparation of land for use should generally be included in the cost of the land. For example:

Appraisal
Clearing
Damage to property of others
Drainage
Grading
Landscaping
Legal fees and expenses
Plats and surveys
Removal and relocation of the property of others as part of purchase contract
Removal of structures or facilities purchased, but not used

However, the above land improvements when applied to public domain lands shall be reported as costs under Code 80: "Other Structures and Facilities," blocks 23 and 24, and identified as such in "Remarks," block 26; rather than as costs under "Land."

If cost is less than $500, enter cost as "0." Costs of $500 or over should be reported to the nearest thousand dollars. For example: if records indicate a cost of $500, round to "1"; similarly, enter "1" for cost of $1,200. If records for acquisition costs are not available, report estimated costs and enter "E" after the amount. Such estimates shall be based on costs at date of original acquisition by the Government, adjusted for subsequent capital changes.

Estimate, if not known, the "cost" of property acquired through donation, devise, forfeiture, or judicial process. The estimated "cost" should represent the amount the Government would have had to pay for the land if purchased at the date of original acquisition.

(d) *Buildings.*—For purposes of this report, include buildings completed and available for service as of the reporting date.

In the case of an installation comprised of both Government-owned and trust buildings, a separate report on GSA Form 1166 shall be prepared for each. With regard to buildings held in trust by the reporting agency, blocks 20, 21, and 22 shall not be filled in.

For purposes of this inventory, include buildings being acquired under the "Public Buildings Purchase Contract Program or Lease-PurchaseAgreements," Public Law 519, 83d Congress, as amended. Buildings shall be reported upon completion of construction and the execution of the purchase contract or lease-purchase agreement with the financing contractor.

Block 17. *Usage code and classification.*—For purposes of this report, the *predominant use* of a building, as of the effective date of the report, shall govern its classification on the basis of the following categories:

Block 17. (10) *Office.*—When the largest segment of the total area of a building is used for office space.

Block 17. (21, 22, 23, and 29) *Institutional.*—Buildings devoted to institutional uses, such as hospitals, prisons, schools, libraries, chapels, and museums. Do not include minor emergency or health rooms, chapels, and libraries which constitute only a small portion of a building used primarily for other purposes. Report information on lines 21, 22, 23, and 29, respectively, designated for hospitals, prisons, schools, and "Other institutional buildings." The latter shall include institutional buildings, such as libraries and museums.

Block 17. (30) *Housing.*—Buildings used primarily for dwelling purposes, such as apartment houses, single or row houses, and barracks. Includes public housing, housing for military personnel, housing for institutional personnel, and housing built primarily for personnel in various Federal agencies.

Block 17. (40) *Storage.*—Buildings used for storage purposes, such as warehouses, ammunition storage, and cover sheds. Also include in this category garages used primarily for storage of vehicles or materials. Do not include such facilities as water reservoirs and oil storage tanks, which are to be reported as "Other structures and facilities," blocks 23 and 24.

Block 17. (50) *Industrial.*—Buildings specifically designed and used primarily for production, manufacturing, or developmental purposes. Include in this category buildings used for the production or manufacture of ammunition, aircraft, ships, vehicles, electronic equipment, chemicals, aluminum, and magnesium. Also include in this category laboratories used for industrial purposes. Exclude laboratories of a nonindustrial nature.

Block 17. (60) *Service.*—Buildings used in connection with service activities, such as maintenance and repair shops, laundry and dry cleaning plants, post exchanges, stores, garages (used primarily for vehicle maintenance and repair), and airport hangars.

Block 17. (80) *All other.*—Buildings which cannot be classified elsewhere. Whenever this classification is utilized, give a brief description of use in "Remarks" block.

Block 17. (99) *Trust buildings.*—All buildings held in trust by the reporting agency.

Block 18. *Number of buildings.*—Enter the number of buildings for each applicable usage classification printed in block 17.

Block 19. *Date(s) acquired.*—Enter the date the building was originally acquired by the Federal Government. In cases where several buildings of the same classification were acquired at different dates and are being reported on a single line, indicate the range of dates, such as "1930–42."

Block 20. *Gross floor area, total square feet.*—Enter the total gross floor area (applies to outer dimensions of the building) in square feet, for each class of building reported. However, floor area shall not be reported for buildings held in trust. Include the total floor area of the building(s), regardless of any secondary usages or occupancy by another agency.

Block 21. *Gross floor area, percent occupied.*—Enter the estimated percentage of occupancy or use for each applicable class of building printed in block 17. However, percent occupied shall not be reported for buildings held in trust by the reporting agency.

For buildings which are outleased 100 percent, enter the letters "OL" in this column. When only a portion of a building is outleased, the percent occupied shall be the percentage used by the Federal Government. A brief statement regarding the outlease shall be included in the "Remarks" block.

Block 22. *Cost.*—Enter in this block the total cost to the Federal Government, *reported to the nearest thousand dollars*, for each class of building reported. However, cost shall not be reported for buildings held in trust by the reporting agency. Costs shall include the cost of any capital improvements (additions or betterments) incurred subsequent to date of original acquisition by the Government. Costs for Government-owned buildings on leased land shall also be included.

If the cost is less than $500, enter cost as "0." Enter other cost entries to the *nearest thousand dollars* as described for block 16, above.

In the absence of any recorded data as to costs, they shall be estimated and noted by "E" after the amount. Estimates shall be based on costs at date of original acquisition by the Government, adjusted for subsequent capital changes.

Estimate, if not known, the "cost" of the buildings acquired through donation, exchange, devise, forfeiture, or judicial process. The estimated "cost" should represent the amount the Government would have had to pay for the buildings if purchased at the date of original acquisition.

The cost of buildings being acquired under the "Public Buildings Purchase Contract Program or Lease-Purchase Agreements," Public Law 519, 83d Congress, as amended, shall be recorded at purchase price (total amount of principal payments), plus all other capitalized costs: such as drawings and specifications; architectural, engineering and inspection fees; and miscellaneous project costs. For identification purposes, the letter "P" should be inserted after the amount and a brief explanation given in block 26, "Remarks."

(*e*) *Other structures and facilities.*—

Block 23. *Usage code and classification.*—The various usage categories are preprinted in this block. The coverage of each of these usage categories follows:

Code	*Classification*
13	*Harbor and port facilities.*—Include docks, piers, jetties, and breakwaters situated on federally owned land.
15	*Power development and distribution.*—Include hydroelectric and other power development projects which produce power for resale (generally consisting of dams and powerhouses). Transmission lines which are an integral part of Federal power development systems shall also be included even though the power is produced by another Federal agency.
16	*Reclamation and irrigation.*—Include canals, laterals, pumping stations, storage and diversion dams.
18	*Flood control and navigation.*—Include river improvements, revetments, dikes, docks, and navigational aids situated on federally owned land.
40	*Storage (other than buildings).*—Include storage tanks, silos, igloos, underground vaults, and open storage areas (improved only).
50	*Industrial.*—Include facilities other than buildings used for production, manufacturing or developmental purposes, such as sliding shipways, retaining basins, and pipelines.
71	*Utility systems (heating, sewage, water, and electrical systems).*—Under this category, heating, sewage, water, and electrical systems are reported when they serve several buildings and structures of an installation. When they serve a single building which is reported separately, the cost of such utility systems shall be included in the cost of the building. The usage category for "utility systems" includes heating plants and related steam and gas lines; sewage disposal plants, storm and sanitary sewer lines; water treatment plants, wells, pumphouses, reservoirs, and pipelines; and electrical substations, standby or auxiliary powerplants, lighting structures, and conduits. Structures and facilities utilized by an installation in the production of its own power requirements (not for resale) shall be included in this category.
72	*Communication systems.*—Include telephone and telegraph lines and radio towers.
76	*Roads and bridges.*—Include federally owned highways, roads, related culverts, and connecting bridges. Also include roads within national parks and forests and other Federal installations.
77	*Railroads.*—Include tracks and bridges, tunnels, fuel and water stations servicing railroads.
78	*Monuments and memorials.*—Include all Federal monuments, memorials, and statues.
79	*Miscellaneous military facilities.*—Include all structures and facilities of the Department of Defense (military functions) not included in any other classification.

80 *Other.*—Include sidewalks, parking areas, fences, and trails, which cannot be readily classified under the above categories. Include, also, improvements to public domain lands; such as drainage, grading, and landscaping.

Block 24. *Costs.*—Enter in this block the total cost to the Federal Government, *to the nearest thousand dollars,* opposite each applicable usage category printed in block 23.

Costs shall include the cost of any capital improvements (such as additions or betterments) incurred subsequent to the date of acquisition.

The cost of Government owned structures and facilities located on leased land shall be included.

Costs shall not be reported for (1) other structures and facilities held in trust and (2) historic structures, monuments, memorials, and statues donated to the Federal Government.

In the absence of any recorded data, costs shall be estimated and noted by "E" after the amount. Estimates shall be based on costs at date of original acquisition by the Government, adjusted for subsequent capital changes.

Estimate, if not known, the "cost" of structures and facilities acquired through donation, exchange, devise, forfeiture, or judicial process. The estimated "cost" should represent the amount the Government would have had to pay for the structures or facilities if purchased at the date of original acquisition.

Block 25. *Total cost: Land, buildings, other structures and facilities.*—Enter the sum of the totals of blocks 16, 22, and 24.

(f) *Remarks.*—

Block 26. If it is necessary to clarify or expand any entries beyond the space provided in the various blocks, make such notations in this block or on the reverse of the form.

Indicate in this block whether the installation being reported is being used by other than the reporting agency. In the event that an installation being reported on GSA Form 1166 is considered as excess, in whole or in part, to the needs of the reporting agency, suitable notation shall be made in this block. This notation should indicate whether such installation, or portion thereof, has been or is being reported as excess to the General Services Administration, or has been determined to be surplus in accordance with the provisions of GSA regulations, title 2 on Real Property Management. The GSA Control Number assigned to SF 118: Report of Excess Real Property, should be furnished when practicable.

(*g*) *Type of transaction.*—

Block 27. *Type of transaction.*—Check the appropriate box in block 27 to reflect the nature of the real property change for each installation between the current and the prior inventory report. When practicable, include in "Remarks" a short notation giving an explanation of the change. Descriptions of the various types of transactions follow:

Code No.	*Description*
1	*New acquisition.*—Include newly acquired installations obtained by purchase, construction, or other means. Do not include transfers from other Federal agencies or additions to installations previously reported.
2	*Omission.*—Include only complete installations erroneously omitted from the inventory for the prior fiscal year.
3	*Transfer in.*—Include only installations transferred from other Federal agencies which are not merged with existing installations. Transfers-in which become part of an existing installation shall be coded *6.*
4	*Disposal.*—Include only complete installations disposed of by the Federal Government through sale, donation, exchange, or other disposition to private citizens and organizations or to State and local governments. Do not include transfers to other Federal agencies.
5	*Transfer out.*—Include only complete installations transferred to other Federal agencies.
6	*Revision.*—Include all changes not covered by one of the above codes. These changes include additions to installations previously reported, disposition of a part of an installation previously reported, capital improvements, writeoffs, and corrections to prior years reports.

(*h*) *Signature and date.*—

Block 28. *Prepared by.*—Type in the name and title of the official responsible for the preparation of this report.

Block 29. *Signature.*—The official designated in block 28 shall sign his name in this block.

Block 30. *Date.*—Enter date on which the report was prepared.

GSA FORM 1209 MAY 1958

ATTACHMENT 2a

INSTRUCTIONS FOR PREPARATION OF GSA FORM 1209, SUMMARY OF NUMBER OF INSTALLATIONS OWNED BY UNITED STATES GOVERNMENT

1. General instructions

The Summary of Number of Installations Owned by United States Government, shall be prepared on GSA Form 1209 by each reporting agency for each bureau or other organizational unit, whether or not such agency is required to submit GSA Form 1166 for its real property.

The GSA Form 1209 is intended to provide a reconciliation between the number of installations previously reported and the number of installations as of the new inventory date to avoid omissions or duplications in the inventory.

A separate GSA Form 1209 shall be prepared, as of June 30 of each year, for each bureau or other comparable major organizational unit covering (*a*) properties in the United States, and (*b*) properties outside the United States. An original and one carbon of these forms shall be submitted to the General Services Administration by September 1, accompanied by the related GSA Forms 1166, when appropriate.

2. Specific instructions for the preparation of this summary

(*a*) *Summary identification.*—Enter the effective date of the report. Place a check mark in the appropriate box to indicate whether the accompanying GSA Forms 1166 cover properties in the United States or outside the United States.

(*b*) *Reporting agency.*—Enter in this block the name of the reporting agency; that is, the department, commission, administration, or authority. For example: Department of Commerce, Atomic Energy Commission, Veterans' Administration, or Tennessee Valley Authority.

(*c*) *Bureau or other major organizational unit.*—Enter on this line the name of the bureau or other comparable major organizational unit within the reporting agency. For example: National Bureau of Standards or Bureau of Land Management.

(*d*) *Items.*—

Item A. Enter the number of installations previously reported as of the end of the prior fiscal year. This number must agree with that shown in the detailed electrical accounting machine listings of the previous inventory reports, copies of which have been furnished by the General Services Administration to each reporting agency.

Item B. Enter (in both columns) the number of newly acquired installations not previously reported by the present reporting agency. Do not include transfers from other Federal agencies.

Item C. Enter (in both columns) the number of complete installations erroneously omitted from the inventory in the prior fiscal year.

Item D. Enter (in both columns) the number of reports representing transfers of either complete or partial installations from other Federal agencies. Transfers-in which become a part of an existing installation shall be reported as item G.

Item E. Enter (in both columns) the number of complete installations disposed of by the Federal Government. Transfers to other Federal agencies shall be reported separately as item F.

Item F. Enter (in both columns) the number of reports representing the transfer of complete installations to other Federal agencies.

Item G. Enter the number of reports affecting installations previously reported and still in the inventory for which changes have occurred during the fiscal year. Include all revised reports not specifically provided for in items B through F, above.

Item H. Enter the sum of items A, B, C, and D less the sum of items E and F. This figure represents the total number of installations controlled by the reporting agency as of the inventory date.

Item I. Enter the sum of items B, C, D, E, F, and G. This figure represents the total number of GSA Forms 1166 currently being submitted.

(*e*) *Remarks.*—Give a brief résumé of major changes since the last inventory or of any significant trends which may be included in a report to the Congress to present the agency's viewpoint on real property changes.

(*f*) *Signature and date.*—

Prepared by: Type in the name and title of the official responsible for the preparation of the report.

Signature: The official designated as responsible for the preparation of the report shall sign his name in this block.

Date: Enter date on which the report was prepared.

Attachment 3a

Instructions for the Preparation of GSA Form 1166A: Annual Report of Real Property Leased to United States Government

1. General instructions

a. Preparation of reports

GSA Form No. 1166A: Annual Report of Real Property Leased to United States Government, shall be prepared annually by all reporting agencies, covering their leased real property as of June 30 of each year. This report shall include all real property leased to the United States Government from private individuals and organizations, and from municipal, county, State, and foreign governments, as evidenced by a written agreement involving a monetary consideration and a landlord-tenant relationship. It shall also include right of use and occupancy obtained under eminent domain proceedings or equivalent procedures.

Items to be excluded from the annual reports are (1) real property occupied under permit or other arrangements with other Federal Government agencies or

wholly owned Federal Government corporations; (2) leasehold improvements (but Government-owned buildings or structures located on leased land shall be reported as federally owned); (3) rights-of-way and easements; and (4) real property leased rent free or for nominal rent, unless the property is significant.

Examples of properties to be excluded are (1) building space and/or land made available to the Federal Government, rent free, or for nominal payment, such as rooms in courthouses, county buildings, universities, and (2) land upon which the Government has been granted an easement, right-of-way, or permit to place power transmission lines, gaging stations, fire lookout towers, and revetments. Determination as to whether the item is significant and is rent free or for nominal rental is the responsibility of the reporting agency. 35 Comp. Gen. 713 is suggested as a guide to help resolve questions pertaining to the definition of "nominal payment."

b. Reporting agency

For purposes of the inventory of leased properties, the reporting agency is the one currently administering the lease and making rental payments to the lessor, regardless of which agency made the original lease or is currently using the property.

c. Reporting entity

An individual report shall be submitted for a lease or combination of leases covering (1) buildings and portions thereof, (2) buildings with land, and (3) land only. Real property leased to the United States shall be reported as follows:

(1) *Buildings and portions thereof.*—Leases for buildings or portions of buildings shall be reported, as follows:

(a) *Annual rental of $2,000 or more.*—Each lease executed for a single building, a portion of a building, such as an office building, post office, or warehouse, with an annual rental of $2,000 or over, shall be the subject of a separate report.

(b) *Annual rental less than $2,000.*—At the discretion of the agency, a lease executed for a single building or portion thereof, for which the annual rental rate is less than $2,000, may be combined with similar leases to form a single report, providing the location of the buildings is in one of the following categories:

(*1*) Major city in the United States (only cities listed in attachment 5).
(*2*) State (excluding leases for buildings or portions of buildings in major cities).
(*3*) United States Territory or possession, or foreign country.

(2) *Buildings with land.*—Leases covering one or more buildings with land, such as a supply depot or a consulate, shall be the subject of an individual report.

At the discretion of the agency, a lease covering both buildings and land with an annual rental rate of less than $2,000 may be combined with similar leases to form a single report, providing the location of the property is in one of the following categories:

(*a*) Major city in the United States (only cities listed in attachment 5).
(*b*) State (excluding land and buildings in major cities).
(*c*) United States Territory or possession, or foreign country.

(3) *Land only.*—Leases covering land only may include unimproved lands, as well as land upon which federally owned buildings or other improvements have been constructed or are under construction. (The Federal agency controlling buildings and other structures owned by the U. S. Government on leased land shall report them on GSA Form 1166). These leases shall be reported as follows:

(*a*) *Annual rental of $500 or more.*—Leases for land only with an annual rental of $500 or over shall be the subject of a separate report.

(b) *Annual rental less than $500.*—At the discretion of the agency, a lease for land with an annual rental rate of less than $500, may be combined with similar leases to form a single report, providing the location of the land is in one of the following categories:

(*1*) Major city in the United States (only cities listed in attachment 5).
(*2*) State (excluding land in major cities).
(*3*) United States Territory or possession, or foreign country.

When leases have been combined to form a single report, supporting detailed information for each lease shall be available in the files of the reporting agency.

In no case shall a report cover real property in more than one State. When a lease covers property in more than one State, a separate report shall be prepared for the property in each.

2. SPECIFIC INSTRUCTIONS

a. Date, agency, and property identification

Block 1. Enter effective date of the report.

Block 2. *Agency control number.*—For purpose of identification, each agency may assign a control number for each report submitted.

Block 3. *GSA control number.*—Leave this space blank. For use by General Services Administration only.

Block 4. *Name of property.*—Enter the commonly used name for the property being reported, such as United States Post Office, American Embassy or Wilkins Building. When a building has no name use the street address or other local designation. For consolidated reports covering more than one lease insert the word "Consolidation" in this block.

Abbreviate the name of the property, when necessary, so that it will not exceed 23 letters (count each space between numbers or words as a letter). For example, "First National Bank Building", which has 28 letters, should be abbreviated to "First Nat Bank Bldg."

Block 5. *Reporting agency.*—Enter the name of the agency currently administering the lease and making rental payments to the lessor, regardless of which agency made the original lease or is currently using the property. For example: Department of Commerce, Atomic Energy Commission, or Tennessee Valley Authority.

Block 6. *Bureau or other major organization.*—Enter the name of the reporting bureau, or comparable major organizational unit, within the reporting agency; for example, National Bureau of Standards.

b. Location

Block 7. *State or country.*—Enter the name of the State, United States Territory or possession or foreign country in which the real property is located. When an installation is located in more than one State, a separate report shall be submitted to cover the portion of the installation located in each State.

Block 8. *City or town.*—Enter the name of the city or town in which or near which the property is located, provided the nearby city is located in the same State and county (blocks 7 and 9). Otherwise, do not fill in this block.

Block 9. *County.*—Enter the county, counties, parish, or parishes in which the property is located. (Separate reports for each county in the same State are not required.) If space is insufficient, complete the list under "Remarks," block 24, or on the reverse of the form.

Block 10. *Street address.*—Enter the street address, rural free delivery, route number, or other local designation. When the street address is the same as the building name, this block may be left blank.

Geographical code: Enter the appropriate numerical geographical code for the location of the property as shown in blocks 7, 8, and 9 in the following sequence: State or continent (2 digits), city (4 digits), county or country (3 digits). (Example: Cape Canaveral, Brevard County, Fla., will be shown as 09–0453–009).

Codes may be obtained from the publication Geographical Location Codes, issued by the General Services Administration. (See GSA Circular No. 146, dated November 4, 1957.) It may also be found in the latest GSA detailed inventory tabulation furnished to each reporting agency. Do not fill in this space if the geographical location code is not known.

When the location of the property or properties cannot be identified with a single city (block 8), the code under "City" shall be reported as 9999. When the property or properties cannot be identified with a single county (block 9), the code under "County" shall be reported as 999.

c. Land

Land shall be reported only when specifically provided for in the lease. Easements, rights-of-way, and encroachments shall not be reported.

Block 11. *Usage code and classification.*—Enter the predominant use and related code of land area or site as of the effective date of the report. A breakdown of secondary usages is not required.

Leased land shall be classified on the same basis as federally owned land except for post offices. Land leased in conjunction with a post office and use predominatly as a general service and access area shall be reported as Code 14. Post Office Land. Applicable definitions of all usage categories, other than post office land, are contained in attachment 1a of this circular.

Blocks 12 and 13. *Area, urban and rural.*—Enter the total acreage for every usage code reported in block 11, rounded to the nearest 10th of an acre. If acreage to be reported is a whole number, enter "0" to the right of the decimal, e. g., 10.0. A minimum report shall be one tenth of an acre, e. g., 0.1.

Urban: For purposes of this report, land shall be classified as urban when (1) located in an incorporated place of 2,500 or more, (2) in a densely settled unincorporated place of 2,500 or more, or (3) in a densely settled urban fringe area around cities of 50,000 or more. (Reference: United States Summary and Maps in Volume I of the 1950 Population Census, which lists urban places in each State). Enter in this block the total acreage of urban land acquired for each usage category reported in block 11.

Rural: Classify as rural all properties not covered under "urban" as defined above. Enter in this block the total acreage of rural land for each usage category reported in block 11.

d. Buildings

Block 14. *Usage code and classification.*—For purposes of this report, the predominant use of the space in each leased building location, as of the effective date of the report, shall govern its classification. Every entry in this block requires a square footage entry in block 16.

Leased buildings shall be classified on the same basis as federally owned buildings, except for post offices. Buildings or portions of buildings leased for use as post offices should be reported as Code 14. Post Office.

Applicable definitions of all usage categories, other than post offices, are contained in attachment 1a of this circular.

Block 15. *Number of locations.*—Enter the number of building locations for each applicable usage classification printed in block 14.

Block 16. *Floor area leased—Total square feet.*—Enter the square feet of floor area under lease for each class of building reported. Include the total floor area under lease, regardless of any secondary usages or areas used by other occupying agencies under permit or other arrangements.

e. Other structures and facilities

Block 17. Place a check mark in the space provided in block 17 if the lease provides for the rental of any structures or facilities.

Block 18. Enter the usage classification and a brief description of leased structures or other facilities. The usage classification applicable to the federally owned real property, as defined in attachment 1a, shall also be used exclusively for reporting leased structures and facilities in this block.

f. Lease terms

When the report covers a single lease, entries shall be made in blocks 19 through 23.

When a consolidated report is made covering leases within the same installation, State, country, or city, entries shall be made only in block 19 and block 23.

Block 19. *Number of leases.*—Enter the number of leases included in this report.

Block 20. *Effective date.*—Enter the numerical designation, using six digits, for the month and year that the current lease became effective, e. g., 06–1941 for June 1941.

Block 21. *Expiration date.*—Enter the numerical designation for the month and year that the current lease will terminate, e. g., 12–1959 for December 1959. If any option has been exercised, the expiration date of the extended period shall be used. In no case shall this date be prior to the effective date of this report. When the expiration date of the lease is indefinite, such as in a month-to-month or year-to-year lease, enter 99–9999.

Block 22. *Period renewal option.*—When the agreement provides that the United States Government may renew the lease beyond the expiration date of the current lease, enter the remaining renewal period to the nearest whole year using two digits, e. g., (3 years) 03. Enter an "X" in this block if one of the following conditions exists: (1) the lease contains no renewal provision; (2) the renewal option is for less than 6 months; (3) the expiration date of the lease is indefinite.

Block 23. *Annual rental rate.*—Enter the annual rental rate for the leased property to the nearest whole dollar. When the rental period is less than 1 year or the rental is paid on a monthly, daily, or other than an annual basis, convert the rate to an annual basis. If the rental is nominal or free, but the lease provides for payments to the lessor for utilities and/or services, enter the annual rental rate as specified in the lease. The other amounts paid to the lessor shall not be included in the rental figure. If the agency wishes to report such payments, they shall be entered in the "Remarks" block.

g. Remarks

Block 24. *Remarks.*—If it is necessary to clarify or expand any entries beyond the space provided in the various blocks, make such notations in this block and continue, as necessary, on the reverse of the form.

h. Signature and date

Block 25. *Prepared by.*—Type in the name and title of the official responsible for the preparation of the report.

Block 26. *Signature.*—The official designated in block 25 shall sign his name in this block.

Block 27. *Date.*—Enter the date on which the report was prepared.

INSTRUCTIONS FOR THE PREPARATION OF GSA FORM 1209A: COMPARATIVE SUMMARY OF PROPERTIES LEASED TO UNITED STATES GOVERNMENT

1. GENERAL INSTRUCTIONS

The "Comparative Summary of Properties Leased to United States Government," shall be prepared on GSA Form 1209A by each reporting agency, for each bureau or comparable major organizational unit. A separate GSA Form 1209A shall be prepared, as of June 30 each year, covering leased real property (*a*) in the United States, and (*b*) outside the United States. An original and one copy of this form, together with the related GSA Forms 1166A, shall be submitted to the General Services Administration by October 1.

The GSA Form 1209A is intended to provide (*a*) control over individual inventory reports on leased properties submitted on GSA Form 1166A for the current year, and (*b*) a comparison between data previously reported and the current report to show changes in leases between inventory reports.

2. SPECIFIC INSTRUCTIONS

a. Summary identification

Check the applicable block in the upper right-hand corner of the form to indicate if the summary is for real property located (*a*) in the United States, or (*b*) outside the United States. Enter the effective date of the report.

b. Agency and bureau identification

Reporting agency.—Enter in this block the name of the reporting agency, that is, the controlling department, commission, administration, or authority. For example: Department of Commerce, Atomic Energy Commission, Veterans' Administration, or Tennessee Valley Authority.

Bureau or other major organization.—Enter in this block the name of the bureau, or comparable major organizational unit, within the reporting agency; for example, National Bureau of Standards.

c. Summary data

Column (c) current GSA Forms 1166A.—This column shall contain a summarization and consolidation of statistics included in the Annual Reports of Real Property Leased to United States Government, GSA Forms No. 1166A, submitted for the current inventory. Data for each line of this column shall be entered as described below.

Line 1. Enter the number of GSA Forms No. 1166A submitted in the current report.

Line 2. Enter the total number of leases in effect on the inventory date by adding the entries in block 19 of all GSA Forms 1166A submitted.

Line 3. Enter the total acreage leased by adding the totals of blocks 12 and 13 of all GSA Forms 1166A submitted.

Line 4. Enter the total number of building locations leased by adding the totals of block 15 on all GSA Forms 1166A submitted.

Line 5. Enter the total square feet of floor area leased by adding the totals of block 16 of all GSA Forms No. 1166A submitted.

Line 6. Enter the total annual rental reported for leased real property by adding the entries in block 23 of all GSA Forms 1166A submitted.

Column (d) prior GSA Forms 1166A.—This column shall not be completed for the first year an agency submits its report. Data for completion of this column shall be obtained from the previous year's detailed listing of leases furnished to each agency by the General Services Administration.

Column (e) difference.—Enter on each line the result of column (c) minus column (d). Enter negative quantities in parentheses, e. g., (312). Column (e) shall not be completed for the initial report submitted by an agency.

d. Signature and date

Prepared by.—Type in the name and title of the official responsible for the preparation of the report.

Signature.—The official designated as responsible for the preparation of the report shall sign his name in this block.

Date.—Enter date on which the report was prepared.

33294—58——12

e. Remarks

Significant changes in leases between the prior and current report shall be explained or commented on in this block. When as a result of a new program, or termination of an old program, an agency's leasing activity changes, the cause thereof shall be noted. Property management activities of a bureau or other major organization which result in net economies to the Government shall be explained. Program plans which will affect future leasing operations shall also be noted. All items which the bureau believes would interest the Congress, regulatory executive agencies, or the general public shall be described in this block.

Realty Inventory of the Architect of the Capitol as of June 30, 1958

[Current estimated evaluation of real property]

Land	$86, 930, 000
Buildings and improvements	258, 179, 944
Total real property	[1] 345, 109, 944

[1] Estimated present-day evaluation.

Note.—U. S. Capitol Building, Old and New Senate Office Buildings, Old and New House Office Buildings, and Grounds; site of an additional Senate Office Building; site for an additional House Office Building and appurtenant facilities for the House of Representatives; Legislative Garage; Laboratory used as field office; Capitol Power Plant; Main and Annex Library of Congress Buildings and Grounds; U. S. Botanic Garden and nursery; U. S. Supreme Court Building and Grounds; and U. S. Court of Claims Building.

REPORT OF FEDERAL REAL PROPERTY AS OF JUNE 30, 1958

United States Capitol buildings and grounds

Properties under legislative branch of the Government, occupied by the Congress.

Land:

Acquired by purchase.
Acquired: 1791 to 1956.
Area: 157 acres.
Cost: $21,918,512.
(Includes site acquired in 1949 for additional office building for U. S. Senate and in 1956–57 for additional office building and appurtenant facilities for U. S. House of Representatives.)

Buildings:

United States Capitol, Senate and House Office Buildings, Legislative Garage, and laboratory used as field office.
Constructed: 1793 to 1958.
Floor area: 2,735,000 square feet.
Cost: $74 million (to June 30, 1958).

1. Occupancy and use of these buildings and grounds controlled by the Congress.
2. Assignment and reassignment of space in Capitol under Speaker of House of Representatives and Senate Committee on Rules and Administration; in Senate Office Building under Senate Committee on Rules and Administration; in Old and New House Office Buildings under House Office Building Commission; in Legislative Garage under Vice President and Speaker of the House.
3. Architect of the Capitol has the physical care of these properties.

Capitol Power Plant

Property under the legislative branch of the Government. Supplies heat and air-conditioning refrigeration for the Capitol, Senate and House Office Buildings; heat for the Library of Congress Buildings, United States Botanic Garden, United States Supreme Court Building, Legislative Garage, Government Printing Office, Washington City Post Office, and Folger Shakespeare Library.

Land:

Acquired by transfer.
Acquired: 1904.
Area: 6 acres.
Cost: Transferred without cost by act of Congress.

Buildings:

Main powerplant building: 244 feet by 117 feet, with maximum height of 85 feet.
Annex powerplant building: 90 feet by 50 feet, 2 stories high.

Refrigeration plant building: 123 feet by 80 feet, height approximately 38 feet.
Walk-through tunnels, containing steam and chilled water distribution lines.
Constructed: 1904 to 1954.
Cost: $15,635,000 (to June 30, 1958).

1. Architect of the Capitol has the physical care and operation of plant.
2. Plant under control of the House Office Building Commission.

Library of Congress buildings

Properties under legislative branch of the Government, occupied by the Library of Congress.

Land:
Acquired by purchase.
Acquired: 1886 to 1932.
Area: 15 acres.
Cost: $1,496,779.
Buildings:
Main and annex buildings, Library of Congress.
Constructed: 1889 to 1938.
Floor area: 1,600,000 square feet.
Cost: $20,756,700 (to June 30, 1958).

1. Occupancy and use of buildings and grounds controlled by the Congress.
2. Architect of the Capitol has structural and mechanical care of these properties.
3. All other care, including assignment and reassignment of space, under the Librarian of Congress.

United States Botanic Garden

Properties under legislative branch of the Government, occupied by the United States Botanic Garden, including Poplar Point Nursery.

Land:
Acquired by purchase, transfer, and public domain.
Acquired: 1851 to 1946.
Area: 33 acres.
Cost: $981,140.
Buildings:
Conservatories, greenhouses, office, storage and potting sheds.
Constructed: 1873 to 1933.
Floor area: 89,000 square feet.
Cost: $1,074,000 (to June 30, 1958).

5. Architect of the Capitol serves as Acting Director of United States Botanic Garden.
6. Botanic Garden under control of Joint Committee on the Library.

United States Supreme Court Building

Property under the Chief Justice of the United States, occupied by the United States Supreme Court and the Administrative Office of the United States Courts.

Land:
Acquired by purchase.
Acquired: 1929–30.
Area: 8 acres.
Cost: $1,768,741.
Building:
United States Supreme Court Building.
Constructed: 1931–35.
Floor area: 392,737 square feet.
Cost: $10,538,900 (to June 30, 1958).

1. Occupancy and use of building and grounds controlled by the Congress.
2. Architect of the Capitol has structural and mechanical care of building.
3. All other care under marshal of the Court, except assignment and assignment of space which is under the Court.

United States Court of Claims Buildings

Property occupied by and under the control of the United States Court of Claims.

Land:
Acquired by purchase.
Acquired: 1901–2.
Area: One-half an acre.
Cost: $100,000.
Buildings:
United States Court of Claims Buildings.
Acquired in 1902.
Floor area: 37,000 square feet.
Cost: $245,000 (to June 30, 1958).

1. Occupancy and use of buildings and grounds controlled by the Congress.
2. Architect of the Capitol has structural and mechanical care of the buildings.
3. All other care, including assignment and reassignment of space, under the court.

PART VI

INVESTMENTS IN RELATED AREAS (REALTY) OF THE EXECUTIVE AGENCIES, OFFICES, AND ESTABLISHMENTS OF THE UNITED STATES GOVERNMENT, INCLUDING THE DEPARTMENT OF DEFENSE, COVERING INVESTMENTS NOT INCLUDED IN OVERALL REPORT, AS OF JUNE 30, 1958

Worldwide Related Realty Inventory of the Executive Agencies, Offices, and Establishments of the United States Government, Including the Department of Defense, Covering Investments in (Related) Areas Not Included in Overall Report, as of June 30, 1958

[In thousands of dollars]

[1] Buildings, structures, and facilities computed at acquisition (known or estimated) cost, and these figures are included in the realty section of this report.

DEPARTMENT OF AGRICULTURE,
Washington, October 23, 1958.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives.

DEAR CONGRESSMAN DAWSON: Reference is made to your letter of March 12, 1958, and to our reply of April 4 in connection with estimates of the value of public domain realty administered by this Department as of June 30, 1958. Such estimates together with acreages are shown by State in the accompanying table.

The area of public domain realty administered by the Department as shown in the table exceeds last year's figure by 42,626 acres. This difference represents for the most part acreage transferred to the administration of this Department by the Department of the Interior. The balance represents the net increase resulting from a number of relatively minor acreage adjustments made during the year. No public domain lands were transferred from this Department to other Federal agencies during the 12 months ending June 30.

As in prior years, the data represent an attempt to determine the commercial values of public domain lands and timber in terms of "fair market value" assuming the marketability of all lands. As before, no allowance has been made for public values for such important uses as water production. The estimated values furnished herewith are based upon those previously reported as adjusted to reflect acquisitions and disposals during the year. The value of mineral resources subject to disposal under the mining or mineral leasing laws are, as before, being reported to the committee by the Department of the Interior and are not included in the attached figures.

Sincerely yours,

E. L. PETERSON, *Assistant Secretary.*

DEPARTMENT OF COMMERCE,
CIVIL AERONAUTICS ADMINISTRATION,
Washington, October 24, 1958.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: In accordance with your letter of March 11, 1958, addressed to the Administrator, we are pleased to submit, in duplicate, reports listing the public domain under the control and custody of the Civil Aeronautics Administration. One of the reports is for our public domain within the United States, and the other is for our public domain in Alaska.

Sincerely yours,

LEWIS N. BAYNE,
General Services Officer.

Total			91,533.36	5,679,214	62,677,590	68,356,804

[1] Estimated 96 percent of total improvements on public domain.
[2] Many improvements are not on the 1,669.63 acres that remain withdrawn, but on an additional 1,763 acres requested of the Bureau of Land Management.
[3] Estimated 99 percent of total improvements on public domain.
[4] Estimated 78 percent of the airstrip and $75,000 worth of other improvements are on public domain.
[5] Public domain land is being relinquished and all improvements removed to land held under permit from the U. S. Forest Service.

DEPARTMENT OF COMMERCE,
COAST AND GEODETIC SURVEY,
Washington, September 29, 1958.

Hon. WILLIAM L. DAWSON,
Chairman, Executive and Legislative Subcommittee of the Committee on Government Operations, House of Representatives, Washington, D. C.

DEAR MR. DAWSON: In response to your letter dated March 12, 1958, attached is the information on public domain land held by this Bureau.

If additional information is required, we will be glad to comply with your request.

Sincerely yours,

CHARLES PIERCE
(For H. Arnold Karo, Rear Admiral,
Coast and Geodetic Survey, Director).

Sitka Magnetic Observatory

1. Number of acres and location:
   a. Acres 118.74.
   b. Location: Sitka, Baranoff Island, Alaska.
2. Description of property:
   a. Land: Wooded land on northern outskirts of Sitka.
   b. Buildings, all permanent:

Type	*Number*	*Floor space (square feet)*
Houses	2	4, 551
Storage	1	323
Service	1	252
Observatory	3	2, 167
Total	7	7, 293

   c. Facilities, all permanent:
      Electrical distribution system.
      Roads and bridges.
      Sewage system.
      Water system.
3. Use of land and buildings: A primary magnetic observatory and seismological station.
4. Evaluation of lands and buildings:

a. Land	$35, 500
b. Buildings	51, 000
c. Facilities	4, 000
Total	90, 610

33294—58——14

Tucson Magnetic Observatory

1. Number of acres and location:
   a. Acres: 173.
   b. Location: Tucson, Puma County, Ariz.
2. Description of property:
   a. Land: Desert land located 10 miles east of Tucson.
   b. Buildings, all permanent:

Type	*Number*	*Floor space (square feet)*
Office	1	1,200
Houses	2	2,766
Storage	3	778
Observatories	9	2,747
Total	15	7,491

   c. Facilities, all permanent:
      Fencing, 4,400 feet.
      Gasoline storage tank, 280 gallons.
      Well, 200 feet, with 5,000 gallon storage tank.
      Electrical distribution system.
      Sewage system.
3. Use of land and buildings: Primary magnetic observatory and seismograph station.
4. Evaluation of land and buildings:

a. Land	$310,000
b. Buildings	53,000
c. Facilities	7,000
Total	370,000

DEPARTMENT OF COMMERCE,
BUREAU OF PUBLIC ROADS,
Washington, D. C., September 12, 1958.

Hon. WILLIAM L. DAWSON,
House of Representatives,
Washington, D. C.

DEAR MR. DAWSON: The enclosed tabulation of public domain properties under the control of the Bureau of Public Roads as of June 30, 1958, is furnished incident to your request of March 12, 1958. The changes from last years report are basically the result of opening additional maintenance depots and the modifications of the depots and camps that have occurred in the "fixed improvements" during the past year.

If I can be of further service, please do not hesitate to call on me.

Sincerely yours,

PAUL F. ROYSTER,
Assistant to the Federal Highway Administrator.

Name	Location	Usage	Acreage	Present value of land	Value of fixed improvements	Total

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., November 26, 1958.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House Office Building, Washington, D. C.

DEAR MR. DAWSON: By letter of March 11, 1958, you requested this Department to furnish the House Committee on Government Operations certain data pertaining to the value of public domain lands, with the improvements thereon. You also requested that we again assume responsibility for reporting estimated values of all public domain mineral resources in the continental United States and Alaska.

Pursuant to this request and to subsequent correspondence there are enclosed:

Table I. Estimated market value of public domain lands administered by United States Department of the Interior, June 30, 1958, by States, acres, land value, average value per acre, cost of improvements.

Table II. Cost of buildings, June 30, 1958, by types; by States.

Table III. Cost of structures and facilities, June 30, 1958, by functions served; by States.

Table IV. Mineral resource value of the public domain by States, Alaska, and the Outer Continental Shelf.

Table V. Net transfers of public domain between the Department of the Interior and other Federal agencies, fiscal year 1958.

Sincerely yours,

D. OTIS BEASLEY,
Administrative Assistant Secretary of the Interior.

TABLE I.—*Estimated market value* [1] *of public domain lands administered by U. S. Department of the Interior, June 30, 1958*

State	Acres	Land value	Average value	Cost of improvements
Alabama	6,110.0	$137,000	$22.42	
Arizona	17,278,046.5	70,304,000	4.07	$221,202,000
Arkansas	14,942.1	672,000	44.97	524,000
California	22,089,907.0	406,148,000	18.39	100,460,000
Colorado	9,400,419.2	158,868,000	16.90	52,679,000
Florida	6,965.5	333,000	47.80	137,000
Idaho	12,655,859.4	152,379,000	12.04	64,624,000
Illinois	228.8	3,000	13.11	
Indiana	40.0	5,000	125.00	
Iowa	333.7	3,000	8.99	
Kansas	1,431.0	20,000	13.98	
Louisiana	16,471.6	214,000	12.99	166,000
Michigan	15,938.8	329,000	20.64	11,000
Minnesota	85,089.1	683,000	8.03	
Mississippi	12,317.9	285,000	23.14	
Missouri	475.0	31,000	6.53	
Montana	8,448,181.2	116,831,000	13.83	112,243,000
Nebraska	37,407.8	216,000	5.77	1,458,000
Nevada	51,232,029.3	204,210,000	3.99	99,914,000
New Mexico	14,287,600.2	57,939,000	4.06	9,329,000
North Dakota	97,566.5	597,000	6.19	1,787,000
Ohio	82.0			
Oklahoma	109,095.2	1,415,000	12.97	1,976,000
Oregon	16,307,406.2	659,919,000	40.47	30,645,000
South Dakota	374,413.8	2,464,000	6.58	3,129,000
Utah	26,538,346.0	167,240,000	6.30	13,980,000
Washington	1,744,055.2	154,994,000	88.87	43,597,000
Wisconsin	2,626.0	33,000	12.57	
Wyoming	20,437,724.4	127,437,000	6.24	108,106,000
Total, Continental United States	201,201,109.4	2,283,709,000	11.35	865,967,000
Alaska	314,957,013.2	437,881,000	1.39	131,683,000
Total, United States	516,158,122.6	2,721,590,000	5.25	997,650,000

[1] Pursuant to the committee's instructions these are "real-estate" values exclusive of "recreational or other value." They are based on a "current market value" concept. However, since many of the lands have been neither identified by survey nor classified as to their highest and best use, the figures, at best, represent only a rough approximation of actual values, subject to serious limitations on their usefulness.

Washington	450	Oil and gas; coal.
Wyoming	575,000	Oil and gas; sodium; coal, phosphate.
Continental United States	1,671,110	
Alaska [5]	42,000	Oil and gas; coal.
Outer Continental Shelf [6]	3,200,000	Oil and gas; sulfur.
Total, United States	4,913,110	

[1] For the purpose of establishing a "real estate" value of the public domain, mineral resource values are the capitalized value of income accruing to the Federal Treasury. This income is almost entirely derived from minerals subject to mineral leasing acts. Only negligible income is derived from minerals subject to location under the mining laws because they pass from Federal ownership upon discovery; before discovery, they have only speculative assignable value best reflected in the surface values. Building stone, sand and gravel, and similar materials subject to disposal under the materials act are also reflected in surface values.

[2] Includes lands transferred from the public domain; excludes acquired lands.

[3] Predicated on present receipts from mineral leases, licenses and permits taking into account probable future production and demand factors; capitalized as an annuity for 50 years at 4 percent compound interest and discounted to present value. Estimate of October 1958.

[4] Minnesota copper and nickel royalty estimates are capitalized as the present value, at 4 percent compound interest, of a 25-year annuity deferred 25 years.

[5] Alaska oil and gas royalty estimates are capitalized as the present value, at 4 percent compound interest, of a 10-year annuity deferred 40 years.

[6] The Outer Continental Shelf estimate is preliminary, subject to change with production experience, with litigation, and with technologic developments.

TABLE V.—*Net transfers of public domain between the Department of the Interior and other Federal agencies, fiscal year 1958*

	Acres
Net transfers to—	
Department of Agriculture	110,650
Atomic Energy Commission	17,142
Department of Defense	595,512
Department of the Treasury	70
Net transfers from Department of Commerce	4,046

THE SECRETARY OF HEALTH, EDUCATION, AND WELFARE,
Washington, November 12, 1958.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D. C.

DEAR MR. DAWSON: Attached are the data promised in our letter of March 19, 1958, concerning public domain properties under the control of this Department as of June 30, 1958, to be included in the Federal Property Inventory Report published by your committee.

If we can be of any further assistance, we will be happy to serve you.

Sincerely yours,

ARTHUR S. FLEMMING, *Secretary.*

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

GSA FORM 1166 MAY 1958

DEPARTMENT OF JUSTICE,
BUREAU OF PRISONS,
Washington, September 9, 1958.

Re: Real property inventory, Federal Prison Service.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN: In your memorandum of March 11, 1958, you requested certain information regarding the three parcels of public domain lands under the jurisdiction of the Bureau of Prisons. The following data is submitted in accordance with our inventory of June 30, 1958:

United States Penitentiary, Alcatraz, Calif.—The acreage is still 12.7 and the land value $177,800 based on 1934 records at time of transfer to us from the Army. The buildings are presently valued at $1,776,000 with other structures and facilities included at $397,000, making a total book value of $2,350,800.

Federal Reformatory, El Reno, Okla.—The 1,000 acres of public domain land is valued at $66,000 as reported last year. There were no buildings on the land when acquired. Buildings are presently valued at $1,957,000 and other structures and facilities at $307,000, making a total of $2,330,000.

United States Penitentiary, Leavenworth, Kans.—The 1,265 acres of public domain land is valued at $190,000. The present book value of the buildings is $5,065,000 and $442,000 for the other structures and facilities, making a total of $5,697,000.

The above values for public domain land were not included in the 1958 General Services Administration report. Increases in totals for the Alcatraz and El Reno institutions were due to completion of major alteration projects. Decrease in the Leavenworth valuation is due to transfer of the Missouri River bridge project to Department of Defense and is partially offset by completion of major alteration projects.

We trust the above information will assist your committee. Please advise if additional information is required.

Sincerely,

FRANK LOVELAND, *Acting Director.*

BUREAU OF PRISONS

Public domain properties

Location and description	Acreage	Value of acreage	Value of buildings and facilities	Total
U.S. Penitentiary, Alcatraz, Calif.	12.7	$177,800	$2,173,000	$2,350,800
Federal Reformatory, El Reno, Okla.	1,000.0	66,000	2,264,000	2,330,000
U.S. Penitentiary, Leavenworth, Kans.	1,265.0	190,000	5,507,000	5,697,000
Total	2,277.7	433,800	9,944,000	10,377,800

POST OFFICE DEPARTMENT,
ASSISTANT POSTMASTER GENERAL,
BUREAU OF FACILITIES,
Washington, D. C., August 15, 1958.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: Referring to your letter dated March 11, 1958, addressed to the Postmaster General, I am pleased to submit the following information relative to public domain properties in Alaska, under the control of the Post Office Department as of June 30, 1958:

Location	Acres	Description	Land	Building	Total
Anchorage	2.0	Land and building	$435,677	$2,415,000	$2,850,677
Ketchikan	1.7	do	189,875	1,208,000	1,397,875
Sitka	0.7	do	51,300	572,000	623,300
Wrangell	2.5	do	150,000	393,000	543,000
Total	6.9		826,852	4,588,000	5,414,852

The above is the estimated present-day valuation of the land and buildings.

The usage of all of these properties is to house the post office, courts, and other Federal offices.

If any additional information is desired, I will be very pleased to cooperate.

Sincerely yours,

ROLLIN D. BARNARD,
Deputy Assistant Postmaster General
(For Assistant Postmaster General Kieb).

UNITED STATES COAST GUARD,
Washington, D. C., October 29, 1958.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D. C.

MY DEAR MR. DAWSON: Your letter of March 11, 1958, set forth the need of your committee for certain data on public domain property under the control of the Coast Guard.

As promised in my letter of March 18, 1958, these data have been compiled and the report is forwarded herewith as enclosure (1). All costs are reported in thousands of dollars.

The report is submitted in the same format as last year and the usage codes are those assigned by the General Services Administration. A key to these codes is forwarded as enclosure (2).

Estimated present-day evaluations of land, buildings, and other structures and facilities were determined in accordance with the following procedures:

Land.—Evaluated on costs of adjoining properties and estimated fair market value.

Buildings.—Evaluated on estimated replacement cost less depreciation. Estimated replacement cost was determined by applying to the original acquisition cost, the ratio of the Engineering News Record building cost index (or ENR construction cost index) for June 1958 divided by the corresponding index applicable at the time of construction.

Other structures and facilities.—The values were determined by the same method used for buildings.

Sincerely yours,

A. C. RICHMOND,
Vice Admiral, United States Coast Guard,
Commandant.

U. S. TREASURY DEPARTMENT

U. S. COAST GUARD

EXPLANATION:

Property Codes 1, 2, and 3 indicate whether an installation consists of land, buildings, and structures and facilities, respectively, or combinations thereof.

Usage Codes describe the predominant usage under each of these categories.

How Acquired Code applies to land only and indicates manner of acquisition.

EXAMPLE:

Entries 1 in the Property Code Column, 10 in the Usage Code Column, and 1 in the How Acquired Column would indicate that an installation includes land, used predominantly for locating office buildings thereon, and was acquired as public domain. This same installation might have other entries, such as 2 in the Property Code Column and 10 in the Usage Code Column which would indicate an office building.

HOW ACQUIRED CODE	DESCRIPTION
1	PUBLIC DOMAIN (Applicable only within the United States and in Alaska)
2	PURCHASE, DONATION, EXCHANGE, ETC.
3	LIFE INTEREST (Applicable only in Canal Zone and foreign countries)

GENERAL SERVICES ADMINISTRATION,
Washington, D. C., October 29, 1958.

Hon. WILLIAM L. DAWSON,
Chairman, House Committee on Government Operations,
House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: Pursuant to your request, enclosed is a tabulation of the approximate market values of the public domain properties under control of the General Services Administration as of June 30, 1958.

The only change in GSA's public domain properties, since our report of last year, is a slight increase in the estimated present-day value of the building at San Luis, Ariz.

Sincerely yours,

EDWARD K. MILLS, JR.,
Acting Administrator.

Estimates of approximate present-day values of public domain properties for which GSA is responsible as of June 30, 1958

Name and location	Acreage	Estimated approximate present-day value (in thousands of dollars)		
		Land	Buildings	Total
Border station, San Luis, Ariz	36.9	2	113	115
Border station, Lukeville, Ariz	2.0	(1)	13	13
Border station, Babb, Mont	.7	(1)	60	60
Total	39.6	3	186	189

[1] Less than $500.

VETERANS' ADMINISTRATION,
Washington, D. C., October 31, 1958.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations, House of Representatives, House Office Building, Washington, D. C.

DEAR MR. DAWSON: As requested in your letter of March 11, 1958, there is enclosed a list showing the desired information concerning public domain properties under jurisdiction of the Veterans' Administration.

Sincerely yours,

SUMNER G. WHITTIER,
Administrator.

Public domain properties under jurisdiction of the Veterans' Administration on June 30, 1958

Station	Number of acres	Description of property	Usage	Estimated present-day value [1]	
				Land	Buildings
Boise, Idaho	[2] 87.5	Land and buildings.	VA hospital	$69,000	$3,589,000
Fort Bayard, N. Mex	484.3	do	do	5,569	2,037,000
Fort Lyon, Colo	[3] 568.0	do	do	9,372	4,964,000
Fort Meade, S. Dak	1,189.0	do	do	25,535	2,203,000
Fort Douglas, Salt Lake City, Utah.	139.2	do	do	974,400	9,522,000
Sheridan, Wyo	341.6	do	do	5,115	4,045,000
Walla Walla, Wash	279.7	do	do	167,820	1,646,000
Whipple, Ariz	256.3	do	do	385,731	2,486,000
Total	3,345.6			1,642,542	30,492,000

[1] Value of buildings represents VA book value of either actual or estimated cost.
[2] 15.34 acres transferred to the Department of the Interior Aug. 27, 1957.
[3] 7.2 acres transferred to the Department of the Army Jan. 8, 1958.

ATOMIC ENERGY COMMISSION,
Washington, D. C., October 29, 1958.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives.

DEAR MR. DAWSON: Reference is made to your letter to the Acting General Manager dated March 11, 1958, requesting information as to the value as of June 30, 1958, of the public domain land used by the Atomic Energy Commission and the value as of the same date of the AEC owned improvements on such land.

Enclosed is a staff report with attachments furnishing the requested information.

Sincerely yours,

PAUL F. FOSTER, *General Manager.*

ATOMIC ENERGY COMMISSION,
Washington, D. C.

Subject: Present value of public domain land used by AEC and the present value of AEC improvements on such land.

Reference: Letter to the Acting General Manager, AEC, from chairman, House of Representatives Committee on Government Operations, dated March 11, 1958, relating to the above subject.

Attached is a tabulation, by States, showing: (1) the area, the value as of June 30, 1958, and usage of the public domain land controlled by the AEC in connection with its operations, (2) the number, classification and the value as of June 30, 1958, of the AEC "Buildings" on such land and, (3) the value as of June 30, 1958, of "Other structures and Facilities" constructed on such land by the AEC. The statistical tabulation has been prepared on the basis of information furnished by Operations Offices using public domain land in accordance with the following instructions:

1. Public domain: For the purpose of the report the term public domain was defined as that land within the continental United States and Alaska, title to which was acquired by the United States of America by treaty, conquest, or cession from the Original Thirteen Colonies and such title is still vested in the United States.

2. Present value of public domain land: The values shown cover the surface land only. Our Operations Offices were advised also that it was not desired that a formal appraisal be made of such surface land, but that the value should be developed on the basis of what similar lands were selling for as determined by available information or informal inquiry of those who might possess such knowledge.

3. Present value of buildings: That such value could be estimated with sufficient accuracy by taking the total net book cost as of June 30, 1958, for each classification of buildings reported and applying the ratio of Engineering News Record for June 1958 (building or construction), for the applicable geographical area divided by the corresponding Engineering News Record index applicable at the time

of construction. The value of "Other structures and facilities" were to be determined by the same method. In general, this is a cost of reproduction which takes into account depreciation.

General: When "Buildings" and "Other structures and facilities" were located on public domain land and non-public-domain land, effort has been made to prorate that portion on the public domain land. The value for "Buildings" excludes the cost of equipment which is not capitalized as a part of the cost of the buildings.

Reference is made to the next to the last paragraph on page 2 of the staff report submitted last year regarding the land in Los Alamos County, N. Mex. A representative of GSA has advised informally that as to the land reported in the annual inventory of federally owned real property (GSA Form 1166) is reported by that office in accordance with the initial method of acquisition. Therefore, the land in Los Alamos County will be reported by that Administration as public domain because it was originally acquired as a part of the public domain. However, for the purpose of this report the land is not considered public domain due to the transfer effected by Public Law 1006, approved August 6, 1956.

The 38,400 acres of land in Nevada reported last year as being occupied by the AEC under permit from the Air Force is occupied by Air Force under a permit from AEC. This area is not included in the AEC tabulation because it is being used by the Air Force. The improvements on this land belong to the Air Force; such improvements are understood to have a value of $122,112.

INTERNATIONAL BOUNDARY AND WATER COMMISSION,
UNITED STATES AND MEXICO,
El Paso, Tex., October 13, 1958.

Hon. WILLIAM L. DAWSON,
Chairman, House of Representatives, Committee on Government Operations, House Office Building Annex, Washington, D. C.

DEAR MR. DAWSON: In accordance with your request of March 11, 1958, for data concerning public domain properties under jurisdiction of this section as of June 30, 1958, there are transmitted herewith two copies of a table showing—

1. Number of public domain acres under jurisdiction of this section as of June 30, 1958.
2. Location and usage made of property.
3. Value of buildings and facilities on the property (not including personalty).
4. Value of land itself.

Very truly yours,

L. H. HEWITT, *Commissioner.*

FEDERAL REAL AND PERSONAL PROPERTY INVENTORY REPORT (CIVILIAN AND MILITARY) OF THE U.S. GOVERNMENT, COVERING ITS PROPERTIES LOCATED IN CONTINENTAL UNITED STATES, IN THE TERRITORIES, AND OVERSEAS, AS OF JUNE 30, 1959

PART I

INTRODUCTION

This Federal property inventory report, represents a compilation of the assigned values of real and personal property owned or controlled by the Federal Government. It is the fifth attempt by the House Committee on Government Operations to record, in a comprehensive and concise manner, assets of the Government. This report covers data as of June 30, 1959, of properties located in continental United States, in the territories, and at overseas bases. Previously, the committee has compiled Federal property inventory reports as of June 30, 1955 (12th Intermediate Report, Report No. 1930, 84th Cong., 2d sess.), June 30, 1956, June 30, 1957, and June 30, 1958.

Each year the committee staff assigned to this project, together with Government department and agency representatives, have delved further into the inventory accounting systems employed by Federal departments and agencies in an effort to include assets heretofore not included because of incomplete records or due to their not being under inventory accounting control.

One needs only to compare the previous inventory reports to visualize the tremendous progress which has been made in the improved accounting methods and recordkeeping of the gigantic amounts of real and personal property owned or controlled by the Federal Government. Up-to-date accounting systems have furthered the efforts of Government departments and agencies to bring inventories under accounting control. This progress, which is being constantly observed, has been stimulated within the departments and agencies as a result of the interest in, and the scrutiny of, Federal property inventories by Members of Congress and particularly the membership of this committee.

Again this year, additional refinements are reflected within this Federal property inventory report. Concentrated efforts will continue, in working with Government department and agency representatives, to improve and broaden the scope of property inventory reports. It is the desire of the committee eventually to present an inventory report which will furnish the Congress and the public a complete and comprehensive listing of Federal personalty at acquisition cost and all Federal realty at acquisition cost, as well as at estimated present-day evaluations. This objective has been partially realized in that public domain and Capitol Hill realty is in this report, and has been previously, recorded at estimated present-day evaluations. In addi-

tion, this current report reflects estimated present-day evaluations of Federal realty heretofore recorded at "zero value" or recorded at $1 for accounting purposes. Progress is continuing in the direction of attaining the ultimate objective of the committee of presenting a realistic and defensible inventory expressed in terms of value-in-use or estimated present-day evaluation.

FEDERAL PERSONALTY

Most Federal personalty figures in this report are furnished the committee by the Department of the Treasury, on request of the chairman of the committee. The Department of Defense reports direct to the committee all its inventories, real and personal, for the three military departments and the Corps of Engineers, civil functions. Personalty inventories of the Architect of the Capitol, the Sergeant-at-Arms of the U.S. Senate, the Clerk of the House of Representatives, the Library of Congress, the Supreme Court of the United States, the U.S. courts of appeals, U.S. district courts, and the special U.S. courts are reported to the committee direct.

Federal personalty (exclusive of cash and related cash items) is reported herein at acquisition cost. This manner of reporting these assets has been discussed with representatives of the General Accounting Office and the Department of the Treasury. It is the consensus that this approach represents a realistic method of recording personalty items, especially in light of replacement costs and in considering amounts received for such items when they are declared surplus and offered for sale. In recording values of items such as paintings, portraits, statues, numerous publications and volumes of books where records are unavailable or the acquisition cost is unknown, an estimated or known value has been used. Numerous personalty assets of the Federal Government are listed on its inventory records at "no value" inasmuch as some such items were donated to the Federal Government at no cost and in many instances it is impossible to place a realistic value on these properties because of their patriotic or sentimental rather than intrinsic value. Such is the case of many items located in the Library of Congress, the Smithsonian Institution, the National Archives, and in other storehouses of the Nation. Another example is the famous Hope diamond which was donated to the U.S. Government and which is valued at figures from something like $200,000 ranging to $2 million. It is a known fact that this asset is worth a considerable sum of money, yet it is not included in inventory reports of this committee.

The increase in personalty figures in our reports are a result of refinements brought about by improved recordkeeping within the Government and because some Department of Defense inventories have been brought under inventory accounting control. The Treasury Department has been instrumental in furnishing the committee data which reflect refinements in many areas of accounting throughout the Government departments and agencies. This is particularly notable in the worldwide inventories of the Department of Defense.

FEDERAL REALTY (EXCLUDING PUBLIC DOMAIN)

Federal realty is listed herein, for the most part, at acquisition cost, with usage categories and number of acres noted. In many cases, realty which has been donated or obtained by the Government at no cost has been recorded at "no value" or $1, for accounting purposes.

The ultimate objective of the committee is to present a comprehensive, as well as a realistic, inventory of Federal real and personal property. Therefore, the Government departments and agencies having Federal realty under their jurisdiction listed at zero value, or recorded at $1 for accounting purposes, were requested to affix an estimated present-day evaluation on such properties for this year's report. Property falling into this category has been so listed previously as a result of its having been donated, or title thereto being transferred, to the Federal Government at no output of Federal moneys. Cooperation in this endeavor has been received from each such department and agency and the methods and manner employed in the evaluation of public domain lands have been used for property in the "no value" category. These up-to-date evaluation figures have been furnished the committee direct by the departments or agencies concerned. This additional refinement has been accomplished by qualified personnel within the departments who have the knowledge and experience in realty appraisals and without the expense involved of engaging outside appraisal firms. The committee feels it is a great accomplishment, at long last, to have evaluations—either estimated present-day value or acquisition cost—placed on all Federal realty.

In keeping with the desires of the committee, the Architect of the Capitol has furnished realty figures for inclusion in this Federal property inventory report which reflect estimated present-day evaluations on properties under his control.

Construction work-in-progress figures for all Government departments and agencies, including the Department of Defense, are recorded in the realty portion of this report. The accounting of these assets as the work on projects progresses is a realistic way to record billions of dollars' worth of Federal assets which have not always been recorded in this manner. The usual procedure is to wait until the Government takes possession of a project from the contractor before the value of such project is recorded on the books of the Federal Government. Our manner of recording construction-in-progress figures reflects the ultimate objective of a comprehensive and complete listing of all Federal assets in all areas at a given time rather than limited reporting in selected areas. It is also representative of accepted good bookeeping methods and practices.

It should be borne in mind that the acquisition costs recorded for some buildings and facilities are representative of present-day evaluations. This is true when considering the value of buildings and facilities which have been constructed or purchased recently.

An additional refinement in the realty portion of our report this year is the listing of Federal realty, excluding public domain, not only by department and general location (whether it is located in the continental United States, in the Territories, or overseas) but by a breakdown of the acreage by States. This additional information will be of particular interest not only to the congressional offices but

to the general public as well. Heretofore, these breakdown figures were not readily available until the property inventory report had been printed, and breakdown figures thus had to be obtained from supporting documents located in the files of the House Committee on Government Operations or the General Services Administration.

FEDERAL REAL ESTATE—THE ULTIMATE ADOPTION OF PRESENT-DAY ESTIMATED EVALUATION PROCEDURES

As pointed out previously, Federal realty under the jurisdiction of the Architect of the Capitol, public domain acreage, as well as realty heretofore listed at "zero value," is recorded in this report at estimated present-day evaluation. Other realty is recorded at acquisition cost. In most instances the acquisition-cost figures in no way represent present-day value. In many instances values have increased tremendously while in others the properties have decreased in value.

As pointed out previously, evaluation assistance and guidance have been pledged the Committee on Government Operations and the Government departments and agencies, on a pro bono publico basis, by the American Institute of Real Estate Appraisers, to assist and advise in setting guidelines and appropriate criteria to be employed in the reevaluation of Federal realty which will determine the recording of estimated present-day evaluations, as well as known acquisition cost figures. Efforts are continuing with the Bureau of the Budget and the General Services Administration, and avenues are being explored, in an endeavor to reach agreement between Government representatives as to a suitable approach to this undertaking. It has been concluded that an honest approach to the evaluation of Federal realty is to use a formula of "estimated replacement cost, less depreciation." From this formula, it is expected that reevaluation criteria will be developed and put into practice. The committee deplores a continuation of the present practices of evaluation by governmental authorities who are aware that such practices result in misleading and antiquated evaluations which demand a more convincing defense than has been made of them. Remedial practices which will correct this situation should be initiated immediately.

Renewed efforts are being made to secure the adoption of improved standards in evaluation procedures and practices. The committee feels that an inventory report such as this should reflect realistic figures on Federal real estate, based on approved evaluation procedures and practices, rather than merely to include figures which, in many instances, are antiquated and present a misleading picture of the Government's investment.

PUBLIC DOMAIN PROPERTIES

Public domain acreage is listed in this report at estimated present-day evaluations. In some instances, Federal departments and agencies have been able to place an estimated present-day evaluation on buildings, structures, and facilities located on public domain lands. However, these estimates are included for information purposes only in the public domain summary table. In order to avoid duplication and for the sake of clarity, all buildings, structures, and facilities are recorded in the realty section of the inventory report at acquisition

cost. When "yardstick evaluation criteria" have been established and it is possible to list all improvements on Federal lands at estimated present-day evaluations, it will be possible to have all realty tables reflect current up-to-date figures, as well as acquisition costs. The method used in this report has been adopted so as not to confuse the reader and at the same time so as to avoid the overlapping of figures and properties. In some instances, because of the nature of the property and the location of the installation itself, it has not been possible to determine, because of intermingling, whether some structures are located on public domain or other Federal property.

Estimated present-day evaluations of public domain have been determined by qualified field representatives employed in real property field offices of the departments. As a result of their skill and assistance, evaluations have been determined without having to engage the services of private professional appraisers. Methods used in the appraisal of public domain lands have been determined by qualified field representatives, based on long experience in the property appraisal field and on evaluation criteria employed in the evaluating of adjoining Federally or privately owned properties.

The Department of the Interior is responsible for determining overall values of mineral resources, oil, and ore deposits for all Government departments and agencies, and the Department of Agriculture is responsible for furnishing the committee estimated overall values of timberlands, grazing lands, grazing rights, and so forth. All public domain data are furnished the committee direct by the department or agency having such property under its control and are not furnished through the General Services Administration.

Since its Federal property inventory report, as of June 30, 1956, the Committee on Government Operations has listed public domain lands in inventory reports at a realistic estimated present-day evaluation. Prior to that date those lands had been listed at "no value." An attempt was made in 1937 by representatives of the Federal Government to evaluate public domain acreage. After considerable time, effort, and funds had been expended in this endeavor, the end result was an overall evaluation of these properties at $1.25 per acre. Such an unrealistic figure in no way reflects the true value of these lands either in 1937 or today. One of the objectives of the committee's preparation of a Federal property inventory report has been to face this situation on a realistic basis and to investigate these property areas, and, at the same time, to encourage improved accounting of known Federal property assets.

As a result of much effort, coupled with experience and concentrated interest, it has been possible for all departments and agencies to complete the job of placing estimated present-day evaluations on public domain acreage under their control.

For the sake of clarity, acquisition cost figures have been used in this report covering most Federal realty, including buildings, structures, and facilities located thereon. Public domain acreage, federally owned acreage previously listed at "zero value," and Capitol Hill realty are all listed in this report at estimated present-day evaluations. Also included in the realty portion of this report are figures covering areas of construction-in-progress, leasehold improvements, and real-estate collateral acquired.

"FUNCTIONAL USE BASIS" DATA

For the first time, this Federal property inventory report reflects assets—real and personal—in a manner prescribed for Federal usage. Major categories, as listed, represent inventories as of June 30, 1957, 1958, and 1959 (for comparative purposes) and cover the major functions of:

(*a*) Major national security.
(*b*) Veterans' services and benefits.
(*c*) International affairs and finance.
(*d*) Labor and welfare.
(*e*) Agriculture and agricultural resources.
(*f*) Natural resources (including public domain).
(*g*) Commerce and housing.
(*h*) General government.

This functional breakdown follows the same analysis as the receipts and expenditure classifications and has some utility in illustrating how the assets of the Government are being utilized.

ACKNOWLEDGMENTS

Acknowledgment is made to the Government department and agency representatives who have been of such great assistance to the committee in the preparation of this report. Representatives of the property offices of the Architect of the Capitol, the Supreme Court of the United States, the Library of Congress, the Sergeant-at-Arms, U.S. Senate, the Clerk of the House of Representatives, and the Administrative Office of the United States Courts have been most helpful in furnishing data direct to the committee for inclusion in this report.

Without the able assistance of qualified and interested Government representatives furnishing data either direct or on a representative-for-agency basis, the compilation of accurate and comprehensive data in the realty and personalty fields, as represented herein, would not have been possible.

CONCLUSION

Interest in the Federal property inventory reports, compiled by the House Committee on Government Operations, continues to increase. This is partially due to the fact that our report includes a compilation of both realty and personalty data. This is particularly helpful to congressional offices, news media, and others writing articles, about Federal assets whether located in a particular area of our Nation, the entire United States, or worldwide. Rather than having to refer to several documents or many departments, it is possible to obtain the needed information from this one document.

More than ever, inquiries about, and requests for copies of the report are being received from congressional offices, Federal departments and agencies, schools and universities located throughout the United States and abroad, and from the military establishments throughout the world. Requests have also been received from various State governments, private research organizations, clubs, and interested individuals for copies of the report. In addition to requests for the publication, many inquiries are received about certain property areas and various methods of property accounting have been suggested.

Sincere interest in the report is constantly being expressed and favorable commendations are being received on the project itself and the work the committee is doing in constantly improving this long overdue public undertaking.

The report has been the subject of several newsletters originating in congressional offices. In some instances, information in a newsletter will list the total Federal property assets as well as figures covering Federal assets located in a particular area or State.

The committee feels that each Federal property inventory report it releases is a step forward in realizing the objectives of House Resolution 26, introduced in the House of Representatives on January 5, 1955, by former Congressman Martin Dies and referred to the House Committee on Government Operations. Our initial report, as of June 30, 1955, was a starting point and represented efforts in recording Federal assets in one document—in the form of an annual inventory report. Until that time there was no central place where one could find data covering all Federal real and personal assets located in continental United States, the Territories, and at overseas bases. Since this initial undertaking, each Federal property inventory report has reflected improvements and refinements. A primary objective in improving our Federal property inventory reports has been the recording of real and personal assets of the Federal Government in a realistic way—to record realty assets at acquisition cost as well as at estimated present-day evaluations and to record personalty assets at acquisition cost. The undertaking of evaluating public domain properties and real property hereto recorded at zero value or at $1 (for accounting purposes) has been a tremendous task and one made possible by interest in, and participation by, the departments and agencies having such properties under their control. The property representatives of these departments and agencies who have worked with the committee staff in completing this assignment are to be congratulated on the job which has been done.

Federal personalty will continue to be reported at acquisition cost. This decision has been on the advice of the General Accounting Office representatives and other accounting specialists within the Government.

The committee is proud of the accomplishment of having this inventory report reflect present-day estimated evaluations on vast areas of realty. It is expected that in the near future evaluation criteria will be formulated and put into practice which will enable the committee to compile and present to the Members of Congress and to the public an inventory report which will be more realistic, practical, and useful than one which merely reflects acquisition cost figures in certain realty areas.

The Territory of Alaska became our 49th State by Presidential proclamation on January 3, 1959. As a result of this action, some change has taken place in the location of assets of this State in our report. Assets of the new State will be found listed with assets of the "Continental United States" and separated from the "Territories" listings in most intances. The Territory of Hawaii, which became our 50th State by Presidential proclamation on August 21, 1959, continues to have its assets listed herein under the "Territories" listings this year. For the sake of clarity, reference is made to section 48 of Public

Law 86–70, 86th Congress, 1st session, dated June 25, 1959, which reads:

DEFINITION OF "CONTINENTAL UNITED STATES"

SEC. 48. Whenever the phrase "Continental United States" is used in any law of the United States enacted after the date of enactment of this Act, it shall mean the 49 States on the North American Continent and the District of Columbia, unless otherwise expressly provided.

Therefore, it should be understood that assets of the Federal Government located in Alaska are considered as being located in Continental United States without any particular additional reference being made thereto. It is understood that an omnibus bill is in preparation at the present time further clarifying the term, "Continental United States." This has been brought about by the Hawaii statehood proclamation. It is expected that the words "Continental United States" will be changed to read "States of the Union." This further change will be reflected in subsequent property inventory reports.

The scope of an inventory of the properties owned by the Federal Government is tremendous and complex. These inventories are located in areas throughout the world and the recording and reporting of such assets is a massive undertaking. Improved bookkeeping methods and accounting controls are proving to be most helpful, both within the civilian and military departments of the Government. Government property representatives assisting in this endeavor are most interested in improving records which represent the Government's investment in the real and personal property fields. It has been established that the need is great for an up-to-date Federal property inventory project such as the committee has undertaken. This project will continue to reflect various economic changes in values as well as improved inventory reporting practices. These results, represented in informative report form, will be of constant utility.

In compiling and reporting data of a classified nature for inclusion in this report, the committee has, of course, complied with necessary security regulations. Efforts have been made to record classified data in a manner which will insure secrecy and at the same time remain informative and accurate. Breakdown figures have been used in each instance possible and only in restricted areas have lump-sum figures been recorded. Substantiating data covering classified areas are available within the departments for those qualified to see and study on a need-for-use basis.

Since 1950 there has been a remarkable increase among county, city, and State officials in interest and activities of property values. Numerous requests for our property inventory report have been received from State governments. For a long time many State governments have been interested in having up-to-date inventories of their real properties which reflect present-day evaluations. Although there is a great difference in the methods and manner of recording property and its value in States at the present time, there are strong indications that a uniform pattern will be established in the not too distant future for recording these inventories. There is an aroused interest in this subject at the present time and State officials are exchanging ideas, methods, and proposed procedures for improving real property accounting and evaluation processes.

The Federal property inventory report, issued by the Committee on Government Operations, is being used as a handbook in many States at the present time and more and more attention is being focused on this publication, not only in the Washington area, but throughout the United States.

The committee's deadline for issuing our inventory reports is December. However, this deadline has been extended this year as is evidenced by the issue date of our current report. The delay this year has been caused by the untimely fire in the Pentagon back in the early summer. Unfortunately, some of the files covering real property of the Department of the Air Force were completely destroyed by the blaze and it has been necessary for the Department to obtain needed data for reconstructing files from field offices of major Air commands. Because the Department of Defense furnishes the committee with comparative figures for the current year as well as the preceding year on its inventories, it has been necessary to encounter a short delay in the compilation of essential statistics. Therefore, instead of our report being released in December of 1959, it is being released in January.

This Federal property inventory report records Federal real and personal assets, worldwide, as being over $264 billion as of June 30, 1959. These are sizable amounts and it is quite evident that record-keeping operations involved in inventories of this magnitude are tremendous. It is also interesting to observe, in this connection, that the size of the national debt, as of June 30, 1959, was recorded as being over $284 billion—an all-time high.

Efforts will continue in making additional improvements in our property inventory undertaking. Eventually the committee expects to be able to present an inventory report which will reflect not only acquisition cost of Federal real estate, but at the same time its estimated present-day evaluation. At that time the basic objective of the undertaking will have been accomplished.

With continued interest in and cooperation by Government department and agency representatives, working with the committee staff, the ultimate objective can be accomplished.

The results so far attained bear eloquent testimony to the effective performance, by the Committee on Government Operations, of a task assigned to it by Congress. There will obviously always remain the job of keeping the inventory currently in correspondence with the assets of the Government.

49199—60——2

PART II

MASTER RECAPITULATION OF FEDERAL PERSONALTY AND REALTY OF THE UNITED STATES GOVERNMENT AS OF JUNE 30, 1959 JUNE 30, 1958 JUNE 30, 1957 AND GRAND RECAPITULATION, BY FUNCTIONAL USE BASIS, OF ASSETS AS OF 1959, 1958, AND 1957

Grand Recapitulation of the Personalty and Realty Assets of the U.S. Government (Agencies, Offices and Establishments of the Government, Including the Department of Defense) as of June 30, 1959, June 30, 1958, and June 30, 1957

[In millions of dollars]

Classification	June 30, 1959	June 30, 1958	June 30, 1957

Treasury Department

Washington, D.C.

Summary statement

In a letter to the Secretary of the Treasury, dated February 27, 1959, the Honorable William L. Dawson, chairman of the Committee on Government Operations, House of Representatives, requested that the Treasury Department again obtain data from Government departments and agencies on personal property at acquisition costs as of June 30, 1959. This followed the procedure that was established in 1956, and information was compiled in a manner similar to that of the previous years. There were also requested data on Federal investments in related areas covering real estate. Following the practice of the past years, the Department of Defense has reported the greater part of its personal property direct to the committee, and it is incorporated in another section of the report. Certain personal property, however, of the Department of Defense, consisting of (1) cash of disbursing officers, (2) receivables, (3) advances to contractors, and (4) certain progress payments, is included in this section of the report by mutual agreement with the Department of Defense.

The "Statement of Personal Property of the United States as of June 30, 1959" has been prepared by the Treasury Department on the basis of statements of financial condition and asset statements received from Government agencies. In all, there were 151 agencies reporting 257 statements of financial condition and asset statements. The statements were prepared in accordance with the requirements of Supplement No. 1 to Treasury Department Circular No. 966, dated June 1, 1956. This supplement covers in detail the instructions for the preparation of these statements to the Treasury Department as of June 30 of each fiscal year. A copy of this circular and the instructions covering the preparation of the statements of financial condition and asset statements are included as part of the Treasury report to the committee. There is also included a statement of "Related Real Property of Selected Agencies, Other Than Department of Defense, as of June 30, 1959." All agencies cooperated fully in furnishing to the Treasury Department data on the assets held by them. There follows a comparative analysis of the personal property of the U.S. Government, excluding the greater part of the Department of Defense, which is included elsewhere in this report, as of June 30, 1959, and June 30, 1958.

The table below shows a net decrease in personal property in the amount of $507.7 million held by all agencies of the Government, excluding that reported by the Department of Defense in another section of this report. The major decrease in assets was the reduction of "Cash on hand and in banks" of $4.4 billion, stemming from a decrease of that amount during the year in the cash of the Treasurer of the United States. The Treasurer's cash had been allowed to build up in June 1958 to meet expenditures in July 1958. The major increase in assets was in "Loans receivable," amounting to $2.5 billion, resulting from an increase of loans to aid agriculture of $1.3 billion and loans to aid homeowners of $1.1 billion.

Comparative figures on personal property of the U.S. Government (excluding the greater part of the Department of Defense shown elsewhere in this report) as of June 30, 1959 and 1958

[In thousands of dollars]

Classification	June 30, 1959	June 30, 1958	Increase, 1959 over 1958	Decrease, 1959 over 1958
Cash on hand, in banks, etc	6, 280, 613	10, 700, 345		4, 419, 732
Investments (excluding public debt securities)	5, 344, 843	3, 932, 239	1, 412, 604	
Accounts and notes receivable	5, 405, 956	5, 865, 418		459, 462
Commodities for sale	6, 331, 170	5, 573, 230	757, 940	
Work in process	493, 234	2, 370, 757		1, 877, 523
Materials and supplies	8, 886, 469	8, 318, 254	568, 215	
Loans receivable	20, 951, 111	18, 483, 964	2, 467, 147	
Machinery and equipment	11, 281, 749	10, 792, 424	489, 325	
Other assets	9, 924, 678	9, 370, 937	553, 741	
Total	74, 899, 823	75, 407, 568	6, 248, 972	6, 756, 717
Net decrease 1959 over 1958			507, 745	

NOTE.—All assets herein reported are shown in gross amounts with no deductions for allowances for losses, or depreciation. Only wholly Government-owned corporation assets and other wholly owned assets are included. Assets held under trust arrangements and interagency assets, including public debt securities are excluded. The assets are in the main valued at acquisition cost (known or estimated).

Included in the above statement are loans outstanding amounting to approximately $21 billion. A comparative analysis of these loans, by type of loan, is as follows:

Comparative figures on gross loans outstanding June 30, 1959 and 1958

[In thousands of dollars]

Type of loan	Amount outstanding June 30, 1959	Amount outstanding June 30, 1958	Increase or decrease (—), 1959 over 1958
To aid agriculture	6, 160, 641	4, 825, 296	1, 335. 345
To aid homeowners	4, 298, 921	3, 234, 602	1, 064. 319
To aid industry	705, 637	654, 183	51, 454
To aid States, Territories, etc	309, 988	270, 918	39, 070
To aid financial institutions	1, 811	4, 225	—2. 414
Foreign loans	8, 762, 524	8, 993. 256	—230. 732
Other	711, 589	501, 484	210. 105
Total loans receivable [1]	20, 951, 111	18, 483, 964	2, 467, 147

[1] Excludes interagency loans and loans made in foreign currencies. Foreign currency loans amounting to $1,200,000,000 are included in other assets.

The statement of personal property of the U.S. Government and that of the investment in related areas covering real estate were prepared by the Treasury Department in close cooperation with the staff of the Committee on Government Operations, House of Representatives. This cooperative effort, together with the requirements of Public Law 863, is furthering the effort of the U.S. Government in securing asset figures on a consistent basis anchored into accounts maintained in accordance with the principles and standards prescribed by the General Accounting Office.

[1] Includes materials held for national defense.

[2] Includes foreign currency assets, representing loans and other receivables recoverable in foreign currency, as well as balances of foreign currencies in U.S. depositaries, in the dollar equivalent aggregating $3,304,632,000. These currencies, acquired without the payment of dollars, were generated under various Government programs, principally the Agricultural Trade Development and Assistance Act of 1954, as amended, and the Mutual Security Acts, as amended. Dollar equivalents are computed, for reporting purposes, to provide a common denominator for the currencies of the many countries involved. The rates of exchange used in the conversion of foreign currency units to U.S. dollar equivalent generally depend on the ultimate utilization of these currencies. Loans and other foreign currency receivables that are dollar denominated in loan agreements are valued at agreement rates of exchange. Loans stated in units of foreign currency and receivables in currencies that are available for sale for dollars and certain other U.S. uses are converted at market rates of exchange in effect on reporting dates, i.e., the rates at which the Treasury sells such currency to Government agencies.

[3] Excludes loans guaranteed by the Commodity Credit Corporation amounting to $229,548,000.

[4] Includes certain figures on personal property for the Department of Defense not included under the special section of real and personal property of that Department in this report.

[5] Does not include the principal of World War I debt accounts ($11,427,523,000) on which payments have not been received since 1933.

[6] Includes World War I indebtedness of Finland amounting to $6,078,000. Does not include an amount of $28,102,000 representing loans to various States pursuant to the act approved June 23, 1836, on which no payments have been received.

[7] Excludes guaranteed loans amounting to $2,120,000.

*Less than $500.

NOTE.—All assets herein reported are shown in gross amounts, with no deductions for allowances for losses and depreciation. Only wholly Government-owned corporation assets and other wholly owned assets are included. Assets held under trust arrangements and interagency assets, including public debt securities owned, are excluded. The assets are, in the main, valued at acquisition cost (known or estimated).

Source: Furnished by Treasury Department.

[1] Includes materials held for national defense.

[2] Includes foreign currency assets, representing loans and other receivables recoverable in foreign currency as well as balances of foreign currencies in U.S. depositaries, in the dollar equivalent aggregating $3,304,632,000. These currencies, acquired without the payment of dollars, were generated under various Government programs, principally the Agricultural Trade Development and Assistance Act of 1954, as amended, and the Mutual Security Acts, as amended. Dollar equivalents are computed, for reporting purposes, to provide a common denominator for the currencies of the many countries involved. The rates of exchange used in the conversion of foreign currency units to U.S. dollar equivalent generally depend on the ultimate utilization of these currencies. Loans and other foreign currency receivables that are dollar denominated in loan agreements are valued at agreement rates of exchange. Loans stated in units of foreign currency and receivables in currencies that are available for sale for dollars and certain other U.S. uses are converted at market rates of exchange in effect on reporting dates, i.e., the rates at which the Treasury sells such currency to Government agencies.

[3] Excludes loans guaranteed by the Commodity Credit Corporation amounting to $229,548,000.

[4] Includes certain figures on personal property for the Department of Defense not included under the special section of real and personal property of that Department in this report.

[5] Does not include the principal of World War I debt accounts ($11,427,523,000) on which payments have not been received since 1933.

[6] Includes World War I indebtedness of Finland amounting to $6,078,000. Does not include an amount of $28,102,000 representing loans to various States pursuant to the act approved June 23, 1836, on which no payments have been received.

[7] Excludes guaranteed loans amounting to $2,120,000.

*Less than $500.

NOTE.—All assets herein reported are shown in gross amounts, with no deductions for allowances for losses and depreciation. Only wholly Government-owned corporation assets and other wholly owned assets are included. Assets held under trust arrangements and interagency assets, including public debt securities owned, are excluded. The assets are, in the main, valued at acquisition cost (known or estimated).

TREASURY DEPARTMENT

FISCAL SERVICE

Washington

REGULATION RELATING TO THE SUBMISSION OF CERTAIN FINANCIAL STATEMENTS BY GOVERNMENT AGENCIES

1956
Department Circular No. 966
Supplement No. 1

Fiscal Service
Bureau of Accounts

TREASURY DEPARTMENT,
OFFICE OF THE SECRETARY,
Washington, D. C., June 1, 1956.

To Heads of Departments and Agencies and Others Concerned:

The Treasury Department has been requested to furnish the Committee on Government Operations, House of Representatives, with information on properties and assets of the United States Government in connection with the committee's responsibilities for conducting a continuing study of the assets of the Government.

Accordingly, Department Circular No. 966, dated January 30, 1956, is amended as follows:

SCOPE

1. Paragraph 3 is amended by adding the following subparagraph d:

"d. Each executive agency and activity not included in the preceding subparagraphs."

PERIODIC REPORTS REQUIRED

2. The first sentence in paragraph 6 is amended to read as follows:

"Agencies responsible for the administration of corporate or noncorporate activities of the type specified in subparagraphs a, b, and c of paragraph 3 shall furnish all of the following periodic financial statements for each such activity whereas agencies referred to in subparagraph d or paragraph 3 are requested to furnish only the Statement of Financial Condition referred to in subparagraph a of this paragraph."

EFFECTIVE DATE

3. This supplement is effective immediately.

W. RANDOLPH BURGESS,
Acting Secretary of the Treasury.

TREASURY DEPARTMENT

FISCAL SERVICE

Washington

INSTRUCTIONS UNDER SUPPLEMENT NO. 1, TREASURY DEPARTMENT CIRCULAR NO. 966

Relating to the submission of certain financial statements by Government agencies

AUTHORITY FOR INSTRUCTIONS

1. These instructions are issued pursuant to Supplement No. 1, dated June 1, 1956, to Treasury Department Circular No. 966 of January 30, 1956, which requires all executive agencies not heretofore reporting under this regulation to furnish the Treasury Statements of Financial Condition.

AGENCY LIAISON

2. All questions pertaining to the regulations or these instructions should be submitted to the Bureau of Accounts, Treasury Department.

COVERAGE OF REPORTS

3. The reports required shall cover all programs and activities under the control of the agency reporting including those operations conducted in the Territories or overseas. Trust programs or activities will be reported separately and identified as such. Agencies maintaining accounts at the bureau level will submit individual bureau reports without consolidation. Assets and liabilities accounted for at the departmental level and not included in the individual bureau reports should be reported separately so that all assets of the department will be included.

REPORTS REQUIRED

4. Executive agencies now reporting under Department Circular No. 966 will continue to do so in accordance with the provisions of the circular, and instructions issued pursuant thereto, except that an additional copy of the Statement of Financial Condition as of the end of each fiscal year and each schedule supporting such statement shall be submitted to the Treasury Department. All other appropriation and fund account activities not now being reported upon quarterly under Department Circular No. 966 shall be reported upon on a consolidated "Statement of Financial Condition," Standard Form 220, insofar as practicable, in accordance with the requirements of Section II of the instructions issued under Treasury Department Circular No. 966 with the following exceptions:

a. Supplemental schedules 1 through 5 supporting the Statement of Financial Condition will not be required. However, the supplementary statement indicating the basis of figures and special accounting practices required by paragraph 6 of the instructions shall be submitted for all activities and funds reported. Such supplementary statement may be furnished by November 1, if any agency finds that additional time is needed for its preparation.

b. In lieu of reporting "Net Investment" as required by paragraphs 30 through 34 of the instructions, line 68 may be used for reporting the amount of "Unexpended Appropriations" and line 69 may be used for reporting "Invested and Donated Capital" or its equivalent. Such titles shall be typed in.

c. It is recognized that some agencies, having primarily administrative-type activities may not yet have developed their formal accounting procedures to provide balance sheet types of financial statements. For such agencies only the "Asset" side of the Statement is required at this time. However, those agencies not reporting a complete "Statement of Financial Condition" should advise the Treasury as to the probable date that such Statements can be expected.

d. An original and one copy of each report shall be submitted to the Bureau of Accounts, Treasury Department, as of June 30 of each fiscal year as soon thereafter as possible but no later than the following September 30. Two additional copies should be prepared and submitted directly to the Bureau of the Budget.

LAND, STRUCTURES, AND EQUIPMENT

5. That part of paragraph 21 of the instructions relating to the reporting of buildings, structures, and facilities in process of construction is amended to add to the last sentence "and will be reported and so identified on line 36 of Form 220 rather than on lines 30 and 31."

SUPPLY OF FORMS

6. Standard Form 220 (Treasury Department Circular No. 966) will be used by reporting agencies and may be obtained through the supply facilities of the General Services Administration.

BASIS OF REPORTS

7. The monetary values reported shall be in accordance with the requirements of Department Circular No. 966 in all cases where accounts are maintained. Where accounts are not maintained such values may be determined from other records or on the basis of estimates according to the best information obtainable. When estimates are used in any line item "Est." shall be typed after the line title.

AGREEMENT WITH OTHER REPORTS

8. In all cases where similar information is being reported as of the same date to committees of Congress, other Government offices or agencies such as the Bureau of the Budget, the General Services Administration, or published in reports of the agency, care must be exercised by the reporting agency to insure agreement of the data submitted. As a specific example, the values reported for (1) land, (2) buildings, and (3) structures and facilities shall be determined in accordance with General Services Administration Circular No. 80, as supplemented, and must agree with the total of the reports rendered to that agency on an installation basis. For treatment of the costs of buildings, structures and facilities under construction not reported to the General Services Administration but included in this

report see paragraph 5 of these instructions. Those agencies reporting on public domain to the House Committee on Government Operations, should furnish a copy of each such report to the Treasury.

EFFECTIVE DATE

9. These instructions shall be effective with the reports to be submitted as of June 30, 1956.

W. T. HEFFELFINGER,
Fiscal Assistant Secretary.

TREASURY DEPARTMENT
Washington

REGULATION RELATING TO THE SUBMISSION OF BUSINESS-TYPE FINANCIAL STATEMENTS BY GOVERNMENT CORPORATIONS AND CERTAIN UNINCORPORATED AGENCIES

1956
Department Circular No. 966

Fiscal Service
Bureau of Accounts

TREASURY DEPARTMENT,
OFFICE OF THE SECRETARY,
Washington, D. C., January 30, 1956.

To Heads of Departments and Agencies and Others Concerned:

PURPOSE OF REGULATION

1. The financial statements and related information to be submitted under these regulations are required to furnish financial information for use by the Treasury Department in discharging its responsibility under the Budget and Accounting Procedures Act of 1950 for compilation of overall financial reports of the Government, and for use by the Bureau of the Budget in following through with the budgetary programs of the reporting agencies.

AUTHORITY FOR REGULATION

2. This regulation is issued pursuant to Section 114 of the Budget and Accounting Procedures Act of 1950 (31 U. S. C. 66b) which authorizes the Secretary of the Treasury to require from agencies reports and information for the effective performance of his responsibility for preparing such reports for the information of the President, the Congress, and the public as will present the results of the financial operations of the Government. As authorized by said section, the regulation provides for the furnishing of such financial data as are required by the Director of the Bureau of the Budget.

SCOPE OF REGULATION

3. This regulation requires the submission of financial statements by corporate and noncorporate Government agencies of the following character:

a. All wholly owned and mixed ownership Government corporations specifically included in the Government Corporation Control Act and amendments thereto, or subsequently brought under the provisions of that Act.

b. All other activities of the Government operating as revolving funds (accounts symbolized 4000–4999 and 8400–8499 by the Treasury Department), for which business-type public enterprise or intragovernmental fund budgets are required by the Bureau of the Budget.

c. Other activities or agencies (1) which are of a business-type nature; or (2) whose operations, services, or functions are largely self-liquidating or primarily of a revenue producing nature; or (3) whose operations result in the accumulation of substantial inventories, investments or other recoverable assets. Agencies and other activities to report under this category will be designated by the Fiscal Assistant Secretary of the Treasury.

ISSUANCE OF INSTRUCTIONS

4. Financial statements and related information under this regulation shall be prepared and submitted by the agencies concerned, in the form and the manner prescribed in the procedural instructions issued by the Fiscal Assistant Secretary of the Treasury.

WAIVERS

5. The Fiscal Assistant Secretary of the Treasury is authorized to waive the provisions of this regulation in whole or in part as to any agency or activity when it is determined that full compliance by such agency or activity is not necessary to accomplish the overall objective to obtain information required for the preparation of financial reports or for the purposes of the Bureau of the Budget.

PERIODIC REPORTS REQUIRED

6. Agencies responsible for the administration of corporate or noncorporate activities of the type specified in paragraph 3 shall furnish for each such activity periodic financial statements, as follows:

a. A *Statement of Financial Condition* showing the assets, liabilities, and investments of the United States Government in the enterprise.

b. A *Statement of Income and Expense and Changes in Accumulated Net Income (or Deficit)* showing in condensed form the earnings or losses arising from operations and changes in accumulated net income (or deficit) for the fiscal year to the end of the reporting period.

c. A *Statement of Sources and Application of Funds* showing the manner in which funds have been applied to the acquisition of assets, to expenses, and to retirement of borrowings and capital; the manner in which funds have been provided by the realization

of assets, by income, by borrowings and capital contributions; and from which the net effect of such operations on the budget for the Government as a whole can be determined.

d. A *Statement of Long-range Commitments and Contingencies* containing a short description of the program and a statement showing the gross amount outstanding of loans guaranteed or insured by the reporting agency, insurance programs, obligations issued on credit of or guaranteed by the United States, long-range commitments and other contingent liabilities, and assets held as offsets to such liabilities.

ACCOUNTING SUPPORT FOR REPORTS

7. One of the principles upon which the Treasury Department is proceeding in connection with the responsibility for preparing central financial reports is that such reports should present fairly the financial condition and results of operations of the agencies as shown by their books and records. Hence, agencies shall furnish the Treasury Department with such information regarding the accounting basis for their reports submitted under this regulation, as may be required for proper evaluation of such reports.

EFFECTIVE DATE

8. This regulation, with the concurrence of the Director of the Bureau of the Budget, supersedes Budget-Treasury Regulation No. 3, dated September 1, 1944, and revised March 15, 1947, issued pursuant to Executive Order No. 8512 of August 13, 1940, as amended by Executive Order No. 9084 of March 3, 1942, and shall be effective with the period ending March 31, 1956.

W. RANDOLPH BURGESS,
Acting Secretary of the Treasury.

TREASURY DEPARTMENT
FISCAL SERVICE
Washington

INSTRUCTIONS UNDER TREASURY DEPARTMENT CIRCULAR NO. 966

Relating to the submission of business-type financial statements by Government corporations and certain unincorporated agencies

I. GENERAL

AUTHORITY FOR INSTRUCTIONS

1. These instructions are issued pursuant to Treasury Department Circular No. 966, issued under the authority contained in Section 114 of the Budget and Accounting Procedures Act of 1950 (31 U. S. C. 66b).

SCOPE OF INSTRUCTIONS

2. These instructions explain the kinds of reports and other information to be furnished to the Treasury Department under the regulation; the periods of time to which the reports shall relate; and other reporting specifications, including information concerning accounting support of the data reported.

3. All questions pertaining to the regulations or these instructions should be submitted to the Bureau of Accounts, Treasury Department.

KINDS OF REPORTS AND INFORMATION REQUIRED

4. The financial statements shall be submitted on the following standard forms:

Standard Form 220. Statement of Financial Condition
Standard Form 221. Statement of Income and Expense
Standard Form 222. Statement of Sources and Application of Funds
Standard Form 223. Statement of Long-range Commitments and Contingencies

The printed forms may be purchased through the General Services Administration. Supporting schedules to be submitted as hereinafter required should be prepared or reproduced on letter size (8 by 10½ inches) paper with appropriate title and references. Minus or "red" figures should be indicated by an asterisk (*). A duly authorized officer of the reporting agency will sign the original Standard Form 221. The copies need not be signed but should bear the name of the signing officer.

5. Where there are several regional corporations or institutions in a financial system performing identical functions, such as the twelve banks of the Federal intermediate credit bank system, consolidated statements shall be prepared and submitted for the system. Separate statements for each regional corporation or institution are not required. Where a single fund operated by an unincorporated agency covers activities made up of unlike functions, agencies may be requested to submit separate statements on a program or functional basis.

6. Each item group reported on the Statement of Financial Condition and the Statement of Long-range Commitments and Contingencies submitted for the last quarter in each fiscal year, should be described, in reasonable detail, outlining the accounting principles followed in reporting each item group on these statements unless such descriptive material is included in annual reports of the agencies submitted under paragraph 8 below. The description of the item groups should cover such subjects as (1) nature of accounts, e. g., whether on a cash, accrual, or modified accrual basis; (2) basis of reporting, e. g., whether at cost or some other value; (3) methods used in determining and reporting allowances for losses; (4) extent of departure from the account classifications provided in the regulation; and (5) extent, if any, of departure in reporting from the preceding year. The descriptive matter should be presented in the same order in which the respective item groups appear in the statements.

Reporting periods and distribution of statements

Statement or schedule	Frequency	Original to Treasury	Two copies to Budget Bureau
Forms:			
Standard Form 220	Quarterly	X	X
Standard Form 221	do	X	X
Standard Form 222	do	X	X
Standard Form 223	Semiannually	X	X
Schedules:			
1. Cash and Fund Balances	Quarterly	X	X
1a. Cash in Banks	Annually	X	
2. Investments in Public Debt Securities	Monthly	X	
3. Investments Other Than Public Debt Securities	Quarterly	X	X
4. Loans Receivable—Other Loans	do	X	X
5. Bonds, Debentures, and Notes Payable	do	X	X
Description of Items	Annually	X	X

The statements due quarterly as of the quarters ending September 30, December 31, March 31, and June 30 of each year shall be submitted on or before the 15th of the second month following those dates, except that all statements required at the fiscal year end should be submitted as soon as possible following the close of the fiscal year, but not later than the following September 30. Schedule 2—Investments in Public Debt Securities, provided for in paragraph 14f, shall be submitted each month within twenty days after the month for which it is rendered. The original of each statement and schedule shall be submitted to:

Report Preparation Branch
Division of Central Reports
Bureau of Accounts
Treasury Department

Two copies of each statement indicated above for the Bureau of the Budget shall be submitted directly to that agency at the same time the originals are sent to the Treasury.

8. Any corporation or agency required to report under this regulation, which prepares an annual financial report for publication or general distribution outside the agency, shall furnish one copy thereof to the Division of Central Reports, Bureau of Accounts, Treasury Department and two copies to the Bureau of the Budget at the time the report becomes available for distribution.

ACCOUNTING SUPPORT FOR REPORTS

9. As stated in the regulation, one of the principles upon which the Treasury Department is proceeding in connection with its responsibility for preparing central financial reports is that such reports present fairly the financial condition and results of operations of agencies, as shown by their books and records. The statements for the period ending June 30 should be in agreement with the corresponding statements submitted annually to the Bureau of the Budget for the last completed fiscal year, recognizing that the arrangement and grouping of items in accordance with the prescribed forms of this regulation may not provide a breakdown that is identical in all respects with that required for the corresponding Budget statements.

EFFECTIVE DATE

10. These procedural instructions shall be effective with the reports to be submitted for the quarter ending March 31, 1956.

II. STATEMENT OF FINANCIAL CONDITION

GENERAL

11. The *Statement of Financial Condition* (*Standard Form 220*) will show in condensed form the assets, liabilities, investment of the United States Government, and other capital of each of the reporting corporations and enterprises. The items to be reported under each classification are described below with appropriate reference to the line number on Standard Form 220. For purposes of uniformity, reporting agencies will adhere to the group classifications provided. Certain group classifications contain blank lines for reporting items to be determined and titled by the reporting agency. Supporting detail for certain items shall be furnished in supplemental schedules as indicated. Other supplemental schedules in addition to those specified herein may on occasion be requested from selected reporting agencies.

12. *Interagency Items.*—Interagency receivables and payables representing amounts due to and from other Federal Government agencies on open accounts, notes, or similar indebtedness will be reported on the separate lines provided therefor under the appropriate asset and liability groups on the Statement of Financial Condition. Any reporting agency holding securities or a proprietory interest in the capital of another Government agency will report such holding under investments and include the same as a separate item in Schedule 3 (see paragraph 14f). Bonds, debentures, and notes payable of the reporting agency which are payable to other Government agencies shall be reflected on Schedule 5.

REPORTING OF ASSETS

13. *Cash and Fund Balances.*—Report under this group cash belonging to the reporting agency or held for the account of others, including unexpended balances of funds made available by appropriation. Balances on deposit in banks and in the Treasury should be reflected on a basis of confirmed deposits and checks issued and consistent with the basis for determining unexpended balances of appropriations and funds in the Treasury central accounts. The itemization hereunder will show:

a. *Cash in banks* (*line 1*).—Report on this line cash in commercial banks which is subject to withdrawal by the reporting agency for regular operations.

b. *Cash on hand and in transit* (*line 2*).—Report on this line cash on hand. Imprest funds and advances with agent cashiers will be included only in cases where the amount of the initial advance was made from a commercial bank account or was treated as a reduction in the fund balance available with the United States Treasury. Imprest funds, advances to agent cashiers, and all other cash on hand not related to specific appropriations or funds but treated as part of the accountability of disbursing officers shall not be included. This item will also

include collections undeposited and deposits for which certificates of deposit have not been confirmed by depositaries as of the close of the period except where such amounts have been included in the accountability of disbursing officers.

c. *Fund balances with United States Treasury.*

(1) *Operating funds* (*line 3*).—Report on this line (a) amounts available in general, special, and revolving fund accounts including all amounts on deposit in corporation checking accounts with the Treasurer of the United States and on deposit with the Treasurer as special agent for the payment of matured principal and interest of bonds and debentures; and (b) unexpended balances of allocated working fund advances *made to* other agencies.

(2) *Trust and deposit funds* (*line 4*).—Report on this line balances of trust and deposit fund accounts which have been segregated as such under separate symbols in the Treasury and for which the liabilities are included on lines 46 and 47.

(3) *Allocations from other agencies* (*line 5*).—Report on this line unexpended balances of allocation and allocated working fund advances received *from* other agencies, regardless of the type of fund account from which advanced (consolidated reports prepared by the Treasury will eliminate this line together with the corresponding liability).

d. *Supplemental Schedule 1.*—A schedule showing the distribution by appropriation and fund account symbol of the amounts reported under "Cash and Fund Balances," by line item, will be presented in accordance with the format illustrated. In those instances where the statement covers only a single fund, the symbol of the fund may be shown in the stub for the appropriate line in lieu of submitting a separate schedule. Once each year, as of June 30, the amount of "Cash in banks" (line 1) will be itemized by bank, location, and amount in accordance with the format illustrated as Schedule 1a.

14. *Investments.*—Report under this group securities acquired and held for investment purposes. The itemization hereunder will show:

a. *Public debt securities* (*par value*) (*line 6*).—Report on this line the par value of investments in bonds, notes, bills or other public debt obligations issued by the United States.

b. *Securities of wholly owned Government enterprises* (*line 7*).—Report on this line investments in securities of wholly owned Government enterprises, including evidences of obligations, capital stock and paid-in surplus. Such securities shall be reported at par.

c. *Unamortized premium or discount* (*line 8*).—Report on this line the amount of unamortized premium (+) or discount (−) applicable to the securities reported on lines 6 and 7.

d. *Other securities* (*line 9*).—Report on this line all securities acquired and held for investment purposes other than those reported on lines 6 and 7 above. Such securities shall be reported at par, plus or minus unamortized premium or discount, if any.

e. *Allowance for losses* (*line 10*).—Report on this line the estimated losses on "Other securities" line 9.

f. *Supplemental Schedules 2 and 3.*—The supporting data for "Public debt securities (par value)" (line 6) will be prepared

monthly as illustrated by Schedule 2 and submitted each month within 20 days after the month for which it is rendered. Data supporting "Securities of wholly owned Government enterprises" (line 7) and "Other securities" (line 9) will be prepared *quarterly* to accompany the Statement of Financial Condition. The amounts of investments shown on line 7 shall be supported in detail in Schedule 3 showing for each issue, the name of the issuing agency, the date of the issue, the interest rate, the call and maturity dates, the par and book values, and whether guaranteed or not guaranteed by the United States. Investments reported on line 9 shall be shown on Schedule 3 itemized to show securities of mixed-ownership and Government-sponsored corporations separately from securities in other general classifications.

15. *Advances to Contractors and Agents.*—Report under this group the amount of unapplied advances outstanding with contractors or agents. The itemization hereunder will show:

a. *Government agencies (line 11).*—Report on this line advances made to other Government agencies net of the unexpended balances remaining in allocated working funds advanced to such agencies. (Since an advancing agency normally debits an advance account for the full amount of advances made, a reporting adjustment will be necessary at the end of each period transferring from this account to "Operating funds" line 3, an amount equal to the unexpended balance remaining in any allocated working fund held by the receiving agency. No such adjustment is necessary where the advance is made to a revolving fund or consolidated working fund.)

b. *Other (line 12).*—Report on this line the balance of advances made to private contractors and other individuals, except where such advances are included in the accountability of a disbursing officer.

16. *Accounts and Notes Receivable.*—Report under this group accounts and notes receivable. Notes receivable under this item normally should include only those short-term notes that have been accepted in liquidation of open accounts as distinguished from loans made in connection with authorized lending programs which should be reported under "Loans Receivable." The itemization hereunder will show:

a. *Government agencies (line 13).*—Report on this line receivables due from other Government agencies, exclusive of advances which are to be reported on line 11 above.

b. *Other (line 14).*—Report on this line the amount of accounts and notes receivable due from other than Government agencies, exclusive of advances which are to be reported on line 12 above.

c. *Allowance for losses (line 15).*—Report on this line the estimated losses on "Accounts and Notes Receivable—Other."

17. *Inventories.*—Report under this group inventories purchased, produced or acquired by forfeiture of loan collateral or donation. The itemization hereunder will show:

a. *Commodities for sale, finished goods, etc. (line 16).*—Report on this line commodities, completed work not yet delivered or finished goods available for sale or delivery though sometimes used by the reporting agency.

b. *Work-in-process* (*line 17*).—Report on this line the value of work-in-process.

c. *Materials and supplies* (*line 18*).—Report on this line supplies or materials to be used in the manufacture of a finished product or charged to expense when used. (Supplies normally charged to expense at time of purchase shall not be included.)

d. *Allowance for losses* (*line 19*).—Report on this line the estimated losses which may be realized on the disposition of the above inventories.

18. *Accrued Interest Receivable.*—Report under this group accrued interest receivable. The itemization hereunder will show:

a. *On public debt securities* (*line 20*).—Report on this line the amount of accrued interest receivable on direct obligations of the United States issued by the Treasury. The accrual should be computed on the same basis that the Treasury Department computes the accrued interest liability, as set forth in Treasury Department Circular No. 300, Revised, dated April 30, 1955.

b. *On securities of other agencies* (*line 21*).—Report on this line accrued interest on securities of other Government agencies. This item would include interest on obligations issued by other Government agencies whether guaranteed or not guaranteed by the United States.

c. *Other* (*line 22*).—Report on this line all accrued interest receivable not reported on lines 20 and 21.

19. *Loans Receivable.*—Report in this group the balance of outstanding loans receivable made, purchased or acquired by rediscount. The amounts reported hereunder will include matured and unmatured principal; extensions, and advances to borrowers. Deposits of borrowers held subject to refund or disbursement on behalf of the borrowers will be reported under the group "Trust and Deposit Liabilities." The itemization hereunder will show:

a. *Government agencies* (*line 23*).—Report on this line loans to Government agencies, which will usually be evidenced by notes receivable or other similar obligations.

b. *Other* (*line 24*).—Report on this line loans to other than Government agencies made pursuant to authorized lending programs of the agency. The amount of other loans will be supported by supplemental Schedule 4, showing the following information:

(1) *Loans to aid agriculture.*—Report under this item loans to farmers and to institutions whose primary purpose is to aid agriculture. In this classification will be included loans to agricultural credit corporations; cooperative associations; crop, livestock, and commodity loans; farm mortgage loans; and similar loans.

(2) *Loans to aid homeowners.*—Report under this item loans to homeowners and to institutions whose primary purpose is to aid homeowners. In this classification will be included mortgage loans; reconditioning loans; loans to savings and loan associations; and similar loans.

(3) *Loans to aid industry.*—Report under this item loans to industrial and commercial enterprises. In this classification will be included loans to railroads, manufacturing con-

cerns, and public utilities; ship construction and reconditioning loans; and similar loans.

(4) *Loans to aid States, Territories, etc.*—Report under this item loans to public bodies, such as States, Territories, possessions, municipalities, and similar governmental subdivisions.

(5) *Loans to aid financial institutions.*—Report under this item loans to general financial institutions such as banks, insurance companies, loan companies, and other similar financial institutions.

(6) *Foreign loans.*—Report under this item loans to foreign governments and private entities in foreign countries.

(7) *Other loans.*—Report under this item loans which cannot be appropriately classified under any of the previous loan classifications.

c. *Allowance for losses (line 25).*—Report on this line the estimated losses on "Loans Receivable—Other" (line 24).

20. *Acquired Security and Collateral.*—Report under this item real estate and other mortgage property and pledged collateral acquired and held for sale, including real estate acquired subject to redemption. This acquired security or collateral should be reported net of prior mortgages or liens not assumed. Where the reporting agency has assumed any mortgages or liens in connection with the acquisition of security or collateral, the value of such assets will be reported gross and the mortgage or lien assumed will be reported under "Other Liabilities" (line 52 or 53).

a. *Real estate (line 26).*—Report on this line real estate, including improvements, acquired in the liquidation of loans.

b. *Other (line 27).*—Report on this line other types of security and collateral acquired in the liquidation of loans where the collateral acquired is not commingled in the accounts of the agency with similar items purchased.

c. *Allowance for losses (line 28).*—Report on this line the estimated losses on "Acquired Security and Collateral."

21. *Land, Structures, and Equipment.*—Report under this group the cost of real and personal property acquired by purchase, donation or other methods of acquisition. Residential and farm properties, and other real estate and improvements acquired through foreclosure incident to a lending operation or other Federal-aid projects will not be reported in this section but will be included on line 26. Real property shall be determined for lines 29, 30, and 31 in accordance with General Services Administration Circular No. 80, as supplemented, except that buildings, structures and facilities in process of construction shall be *included* whether or not "available for service" as of the reporting date.

Line 32 "Leasehold improvements" shall include the cost of easements, rights-of-way, and leasehold improvements to land, buildings, or structures, and facilities occupied by the Government as lessee. However, cost of Government-owned buildings, structures, and facilities located on leased land shall be included on lines 30 and 31 as appropriate.

Line 33 "Machinery and equipment" shall include the cost of machinery and processing equipment, motor vehicles, office machinery, furniture, etc.

Accumulated depreciation (line 34) should represent the amount of depreciation (including amortization of leasehold improvements) applicable to the properties listed which has been charged to costs or depreciation expense.

22. *Other Assets.*—Report under this group all other assets which cannot be properly classified under any of the previous asset groups. Real estate or instalment sales contracts, purchase money mortgages, and similar long-term paper acquired in the sale of acquired security or collateral or other owned property will be reported under this group.

a. *Deferred and undistributed charges* (*line 35*).—Report on this line prepaid expenses, unamortized discount on bonds or debentures issued and outstanding and other deferred charges applicable to the operations of future periods as well as debits arising from disbursements or other charges, the distribution or final disposition of which has not been made.

b. *Blank lines* (*lines 36 and 37*).—Report on these lines, with appropriate descriptive titles, any other assets which cannot be properly classified under any of the previous asset groups.

c. *Allowance for losses* (*line 38*).—Report on this line the estimated losses on "Other Assets."

REPORTING OF LIABILITIES

23. *Accounts Payable.*—Report under this group accounts payable consisting of amounts owed to creditors on open account (including voucher schedules not yet accomplished by disbursing officers). The itemization under this group will show:

a. *Government agencies* (*line 40*).

b. *Other* (*line 41*).

24. *Accrued Liabilities.*—Report under this group accrued interest and other accrued liabilities. Insofar as practicable, similar liabilities which have matured should be reported under "Accounts Payable." The itemization hereunder will show:

a. *Government agencies* (*line 42*).—Report on this line accrued liabilities due Government agencies including accrued interest due the Treasury.

b. *Other* (*line 43*).—Report on this line all other accrued liabilities, including interest on obligations issued to the public.

25. *Advances from.*—Report under this group the amount of unapplied advance payments received for goods or services to be furnished by the reporting agency. The itemization hereunder will show:

a. *Government agencies* (*line 44*).—Report on this line the amount due Government agencies for advance payments received, including any unliquidated liability for goods and services in connection with an advance of funds under section 601 of the Economy Act or similar legislation (regardless of the type of fund from which advanced).

b. *Other* (*line 45*).—Report on this line all other liabilities arising from advance payments for goods and services.

26. *Trust and Deposit Liabilities.*—Report under this group the liabilities for amounts held in trust or on deposit (including the unexpended balances of trust fund appropriations) covering such items as cash collateral, proceeds of loans held for the borrowers, time and demand deposits, withholding tax and United States savings bond

deductions, undeposited general fund receipts, and other deposits held subject to refund or application. The itemization hereunder will show:

a. *Government agencies (line 46).*—Report on this line the trust and deposit liabilities due Government agencies, including such items as withheld Federal taxes and undeposited general fund receipts.

b. *Other (line 47).*—Report on this line all other trust and deposit liabilities not recorded under line 46.

27. *Bonds, Debentures, and Notes Payable.*—Report under this group the par value of all outstanding bonds, debentures, notes, and other obligations of a similar character held by the public or other Government agencies (other than the Treasury). The itemization hereunder will show:

a. *Government agencies (line 48).*—Report on this line bonds, debentures, notes, etc., issued to other wholly owned Government corporations and agencies (other than the Treasury). Borrowings from the Treasury are to be reported under "United States Interest."

b. *Other (line 49).*—Report on this line bonds, debentures, notes, etc., issued to other than wholly owned Government corporations and agencies. All marketable obligations shall be reported here even though a portion may have been acquired by another Government agency.

c. *Supplemental Schedule 5.*—Information on the balances reported on these lines will be submitted as illustrated on supplemental Schedule 5 "Bonds, Debentures, and Notes Payable" showing the character, date of issue, the interest rate, the call and maturity dates, the par value of each issue outstanding and whether guaranteed by the United States. The fact that another Government agency may own marketable obligations issued to the public by the reporting agency need not be reported.

28. *Other Liabilities.*—Report under this group deferred and undistributed credits and on the blank lines provided, with appropriate descriptive titles, all liabilities which cannot be properly classified under any of the other liability groups.

a. *Deferred and undistributed credits (line 50).*—Report on this line deferred income, unamortized premium on bonds or debentures issued and outstanding and other credits applicable to operations of future periods as well as items arising from receipts or other credits, the distribution or final disposition of which has not been made.

b. *Accrued annual leave (line 51).*—Report on this line the amount of unpaid annual leave which has been charged to cost.

c. *Blank lines (lines 52 and 53).*—Items relating to loans receivable discounted with recourse, and guaranteed loans or other agreements of a guaranteed nature which are subject to redemption by the reporting agency at the option of the holder should be reported here. Any other liabilities which cannot be classified under any other liability group shall be reported here with appropriate descriptive title.

29. *Reserves.*—Report on blank lines 54 and 55 operating reserves established for deferred maintenance, liability reserves, reserves established for the benefit of equity holders and other similar special reser-

vations of earnings not classified as part of the "Accumulated net income or deficit" of the enterprise.

REPORTING OF NET INVESTMENT—PRIVATE INTEREST

30. *Private Interest.*—Report under this group the amount of capital provided from non-governmental sources and the accumulated income or deficit applicable thereto. The par value of the capital stock held by the public will be reported on line 57, and the accumulated net income or deficit, segregated as between reserved and unreserved, on lines 58 and 59.

REPORTING OF NET INVESTMENT—UNITED STATES INTEREST

31. *Interest-Bearing Investment.*—Report under this group capital stock, paid-in capital, paid-in surplus, advances from revolving funds, bonds, notes, or other capital items provided directly by the United States Treasury or through other Government agencies where interest is payable, without regard to earnings, to the Treasury or other Government agencies on such capital investment items. The itemization hereunder will show:

a. *Capital stock* (*line 60*).

b. *Borrowings from Treasury* (*line 61*).—Report on this line borrowings from Treasury represented by notes, bonds, or any other means of borrowing. The amount of unused borrowing authority remaining available shall be reported as a footnote.

c. *Blank line* (*line 62*).—Report on this blank line, with appropriate title, any additional items necessary to reflect the proper total interest-bearing investment of the United States Government, including advances from revolving funds, paid-in capital, paid-in surplus, etc. The title "Paid-in capital" or "Paid-in surplus" shall be used only for those items of Government investment specifically identified as such in the legislation authorizing the capitalization. Where a portion of the capital made available by Congress for an item reported on this line is retained by the Treasury in a separate revolving fund or other holding account, the gross amount remaining available shall be reported as a footnote.

32. *Non-interest-bearing investment.*—Report under this group capital stock, paid-in capital, paid-in surplus, advances from revolving funds, bonds, notes, appropriations, or other capital items, which are non-interest bearing, provided directly by the United States Treasury or through other Government agencies, including the capitalization of assets. The itemization hereunder will show:

a. *Capital stock* (*line 63*).

b. *Borrowings from Treasury* (*line 64*).—Report on this line borrowings from Treasury represented by notes, bonds, or any other means of borrowing. The amount of unused borrowing authority enacted by the Congress shall be reported as a footnote.

c. *Appropriations.*—Report under this group the cumulative amounts made available through congressional appropriations to finance the activity being reported upon, net of appropriation balances rescinded, transferred to "Payment of Certified Claims" or otherwise returned to the Treasury. Agencies operating from

other than revolving funds will show on blank lines 65 and 66 a segregation of appropriations as between the amounts expended and unexpended. Revolving fund enterprises may use blank line 66 for reporting the amount of appropriated funds repaid to the Treasury as a capital transfer in those instances where such presentation is required.

d. *Capitalization of assets (line 67).*—Report on this line the net amount derived through recognition of the capitalized value of property, inventory, and other assets on hand at the inception of the fund, donated to the reporting agency or charged to appropriations other than those included in amounts reported on line 65 or 66 above.

e. *Blank lines (lines 68 through 70).*—Report on these lines with appropriate titles any other segregation of the investment of the Government which by statute or otherwise is required for full disclosure, including advances from revolving funds, paid-in capital, paid-in surplus, etc. The titles "Paid-in capital" or "Paid-in surplus" shall be used only for those items of Government investment specifically identified as such in the legislation authorizing the capitalization. Where a portion of the capital made available by Congress for an item reported on this line is retained by the Treasury in a separate revolving fund or other holding account, the amount so retained shall be reported as a footnote.

33. *Accumulated Net Income or Deficit.*—Report under this group the accumulated earnings or losses applicable to the "United States Interest," segregated as between reserved earnings as required by statute or otherwise and unreserved earnings or deficit. The itemization hereunder will show:

a. *Non-revenue producing operations (line 71).*—Report on this line as a deficit (*) item the cumulative net expenses incurred for any programs set up by law to be non-revenue producing and not associated or identified with the regular revenue producing services provided by the agency.

b. *Reserved (line 72).*—Report on this line the reserves which are established by statute or otherwise from annual earnings. Normally direct charges should not be made to such reserves for losses incurred; such losses should be reflected in the income and expense statement.

c. *Unreserved (line 73).*—Report on this line the cumulative deficit or unreserved surplus resulting from operations.

34. *Deposit of General and Special Fund Revenues (line 74).*—Those enterprises which are not permitted to reuse or hold their receipts but are required to deposit their collections into the Treasury as miscellaneous receipts shall report the cumulative amount of such deposits on this line as a deduction from the investment of United States Interest. This will apply only to enterprises that are financed by other than revolving funds.

Personalty Inventory of the Architect of the Capitol as of June 30, 1959

Properties under the jurisdiction of the Architect of the Capitol are located in the U.S. Capitol Building, Senate Office Buildings, House Office Buildings, Capitol Grounds, Capitol Power Plant and Grounds, Library Buildings and Grounds, U.S. Supreme Court Building and Grounds, and U.S. Botanic Garden and Nursery.

Personal property

1. Office furniture, furnishings, and equipment	$1, 740, 975. 06
2. Mechanical equipment	715, 807. 60
3. Supplies and materials (including plant material at Botanic Garden and Nursery)	1, 358, 589. 93
4. Works of art	1, 460, 896. 73
Total personal property	5, 276, 269. 32

U.S. SENATE,
OFFICE OF THE SERGEANT AT ARMS,
Washington, D.C., December 7, 1959.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D.C.

DEAR CONGRESSMAN DAWSON: Enclosed is the inventory report of personal property under the jurisdiction of the Sergeant at Arms of the U.S. Senate as of June 30, 1959, according to your request.

Sincerely yours,

JOSEPH C. DUKE,
Sergeant at Arms, U.S. Senate.

PERSONALTY INVENTORY (UNDER THE JURISDICTION) OF THE SERGEANT AT ARMS OF THE U.S. SENATE AS OF JUNE 30, 1959

Cash held by disbursing officer	$308, 750. 00
Office supplies and equipment, furniture and carpets	481, 347. 77
Mechanical equipment	2, 119, 817. 30
Total personal property	[1] 2, 909, 915. 07

[1] These figures represent acquisition cost, actual or estimated, as of June 30, 1959.

OFFICE OF THE CLERK,
HOUSE OF REPRESENTATIVES,
Washington, D.C., December 2, 1959.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: In compliance with your request, I have the honor to submit herewith an inventory of personal property of the House of Representatives. This statement reflects the specific number of items in various classifications as well as the actual or approximate cost of a class of items, as nearly as possible obtainable, to the date of June 30, 1959. This inventory is classified in nine categories identified as schedules "A" through "I," inclusive, with totals as follows:

A. Furniture and carpet and drapes	1, 872, 574. 88
B. Supplies and material (for construction and repair of furniture, drapes, venetian blinds, rugs, etc.)	109, 678. 42
C. Machinery, tools, and accessories (for repair shops)	11, 612. 92
D. Cleaning and other supplies (for committees and offices in the Capitol)	5, 000. 00
E. Manual typewriters	252, 241. 71
F. Electrical and mechanical equipment	1, 638, 179. 27
G. Stationery room stock	67, 611. 36
H. Recording studios	71, 562. 22
I. Miscellaneous equipment	143, 000. 00
Total	4, 171, 460. 78

Sincerely yours,

RALPH R. ROBERTS,
Clerk, U.S. House of Representatives.

PERSONALTY INVENTORY OF THE OFFICE OF THE CLERK OF THE HOUSE OF REPRESENTATIVES AS OF JUNE 30, 1959

Cash held by disbursing officer	$339, 888. 72
Furniture, carpeting, and draperies	1, 872, 574. 88
Supplies and material (for construction and repair of furniture, drapes, venetian blinds, rugs, etc.)	109, 678. 42
Machinery, tools, and accessories (for repair shops)	11, 612. 92
Cleaning and other supplies (for committees and offices in the Capitol)	5, 000. 00
Manual typewriters	252, 241. 71
Electrical and mechanical equipment	1, 638, 179. 27
Stationery room stock	67, 611. 36
Recording studios	71, 562. 22
Miscellaneous equipment	143, 000. 00
Total personal property	4, 511, 349. 50

Personalty Inventory of the Library of Congress as of June 30, 1959

Cash held by disbursing officer		$65, 293. 67
Collections, equipment, supplies, furniture, miscellaneous		2, 334, 873, 370. 00
Total personal property		2, 334, 938, 663. 67

Report of personal property assets as of June 30, 1959

1. The Library of Congress collections		$2, 233, 965, 000
2. The card catalogs		97, 714, 000
3. Supplies and materials (exclusive of maintenance and engineering supplies to be reported by the Architect of the Capitol)		15, 435

REAL AND PERSONAL PROPERTY OF THE DEPARTMENT OF DEFENSE AS OF JUNE 30, 1959

REAL AND PERSONAL PROPERTY OF THE DEPARTMENT OF DEFENSE AS OF 30 JUNE 1959.

INTRODUCTION AND SUMMARY

Introduction

The National Security Act of 1947, as amended, requires the Secretary of Defense to report annually to the President and to the Congress on the property records on "- - - the fixed property, installations, and major equipment items, and stored supplies of the military departments maintained on both a quantitative and monetary basis - - -" (Section 410 of the National Security Act, as codified in Section 2710 of Title 10, United States Code).

This report showing the status of Department of Defense real and personal property as of 30 June 1959, has been designed to meet this statutory requirement and also to meet the requirement of the Committee on Government Operations of the House of Representatives for information of a similar type.

The values reflected in the report for land and buildings and for long-life equipment, such as ships, are priced at acquisition costs. Acquisition costs of ships as well as land and buildings are often substantially below current replacement values. Construction in progress is valued on the basis of cost of materials and labor incorporated in the projects under construction. The value of items in the supply system inventories, other than major equipment, is based upon standard prices, representing replacement or estimated purchase price. The value of major equipment is generally based on an average latest quantity production price.

The total value as reported is exclusive of: (1) properties and equipment of the National Industrial Plant and Equipment Reserve, which is under the custody of the General Services Administration; (2) supplies and equipment in overseas field Army depots; and (3) properties and supplies under the jurisdiction of the Civil Works Division, Office of the Chief of Engineers, Department of the Army.

Although some of the inventories of the Department of Defense contain details which, for reasons of military security, cannot be publicly released, detailed classified data will be made available to appropriate committees of the Congress from time to time, when required.

Department of Defense Summary

The value of Department of Defense real and personal property reported by the military departments as of 30 June 1959 was $150.7 billion. This is an increase of $1.2 billion over the total value reported at the end of the previous fiscal year. The value of Air Force property increased $3 billion during the fiscal year. The Navy (including Marine Corps) showed a decrease of $1.1 billion, and Army reports a decrease of $0.7 billion.

For the first time since the original issue of this report, the value of the personal property inventory showed a decrease from $119.7 billion at the end of the previous fiscal year to $117.7 billion as of 30 June 1959. This $2.0 billion decrease reflects a decline of $3.2 billion in value of supply system inventories, a decrease of $0.2 billion in production equipment, and a decrease of $0.1 billion in surplus and foreign excess property inventories held by Property Disposal Officers, partially offset by an increase of $1.5 billion in value of major equipment issued for use of the

military forces.

The reduction in value of supply system inventories is a result of (1) a vigorous program of disposal of items of equipment determined to be no longer required due to accelerated obsolescence and other factors arising from changes in strength, changes in strategic plans and organization of fire power, and (2) gross issues and sales of inventories in excess of new procurement. The number of items of major equipments (such as ships and aircraft) in use by the military forces was lower than the previous year; however, the replacing of older obsolete models with the more expensive modern weapons resulted in an increase in the dollar value of equipment in use.

During the fiscal year the cost of real property increased $2.8 billion which together with an increase of $0.4 billion in cost of construction work put-in-place more than offset the overall decrease in value of personal property.

Table 1 shows the geographic location of major type of property by military department as of 30 June 1959. Table 2 shows the total value by type and class of property held by each military department. Of the total of $150.7 billion of real and personal property, the Army holds $38.9 billion, the Navy and Marine Corps together hold $56.7 billion and the Air Force $55.1 billion. Real property accounts for $29.7 billion; construction in progress, $3.2 billion; equipment and supplies in the supply system, $44.5 billion; military and general equipment in use, $63.6 billion; production equipment, $5.3 billion; industrial fund inventories, $0.4 billion; and surplus and foreign excess personal

property $4.0 billion.

Geographically, the value of property in Continental United States is $113.0 billion, in Alaska, Hawaii and U. S. possessions is $5.3 billion, in foreign countries and afloat $31.3 billion and in-transit $1.1 billion.

DOD REAL AND PERSONAL PROPERTIES, BY MAJOR TYPE AND SERVICE

AS OF 30 JUNE 1959

PART I - MILITARY REAL PROPERTY

Section A - Inventory of Military Real Property

1. General

This section of the report presents a summary and a brief analysis of the inventory of military real property as of 30 June 1959. Detailed statistics on Civil Works property (river and harbor and flood control property under the jurisdiction of the Secretary of the Army) are not included in this report.

The real property under the control of the military departments is one of the most important assets of the Department of Defense. In order to achieve maximum defense at minimum cost, such real property must be administered in accordance with modern real property management principles. The real property inventory provides information required to achieve management objectives of better utilization, use of existing real property in lieu of new acquisitions, and reduction of real property holdings and maintenance costs by effecting prompt disposition of excess property.

The first inventory report of the military departments submitted under uniform instructions (Department of Defense Instruction 4165.14) covered an inventory of 1 January 1954 which was completed in November 1954. Data from this first report and each of the subsequent inventory reports have been used in the preparation of Congressional reports by the Department of Defense and the General Services Administration.

The inventory data covering military real property include land and improvements on such property including installed equipment such as fixed overhead crane runways, elevators, lavatories, plumbing and electrical

systems. Machine tools and production equipment at such installations, however, are not included, but are included under personal property, Part II.

2. Department of Defense Summary

(a) Cost of Property Controlled - The total cost to the United States Government of real property controlled by the three military departments as of 30 June 1959 was $29.7 billion, an increase of 10.4 percent over the $26.9 billion reported one year earlier. Of the $2.8 billion increase 63.3 percent, resulting primarily from new construction, was in properties of the Air Force, 19.9 percent in those of the Army and 16.8 percent in those of the Navy. Also, of the $2.8 billion increase 66.5 percent occurred in properties located in Continental United States, 19.1 percent in foreign countries, and 14.4 percent in Alaska, Hawaii and possessions. The distribution by military department is illustrated in Chart 3. Of the $29.7 billion total, $22.6 billion was in Continental United States, $3.3 billion in Alaska, Hawaii and possessions, and $3.8 billion in foreign countries friendly to the United States.

"Controlled," as used throughout this report, has reference to the right of directing the use of property. In connection with buildings, structures, or land, it includes (1) owned (acquired through purchase, condemnation, donation, transfer); (2) leased; (3) public domain (withdrawn permanently or temporarily by military departments); (4) temporary use (acquired through license or permit, temporary public land order, temporary executive or territorial order); (5) easements (utility, clearance, etc.); (6) foreign rights (base rights agreements, reciprocal aid, requisitioned, etc.).

Table 3.--Cost of Military Real Property Controlled, by Location 1/
as of 30 June 1959

DEPARTMENT OF DEFENSE

(Thousands of Dollars)

Location	Department of Defense	Army	Navy (Including Marine Corps)	Air Force
TOTAL.	$29,688,944	$9,371,330	$9,022,357	$11,295,257
Continental United States 2/	22,569,372	3/ 8,096,018	7,166,785	7,306,569
Alaska, Hawaii and Possessions 4/	3,322,918	629,786	1,386,716	1,306,416
Foreign Countries. . . .	3,796,654	645,526	468,856	2,682,272

1/ Does not include amount of rentals paid (see Table 12) nor the value of property under lease; does include costs of improvements on leased properties.

2/ Excludes Real Property in the amount of $4,239 million under the jurisdiction of the Civil Works Division, Office, Chief of Engineers, Department of the Army.

3/ Includes National Security Agency.

4/ Excludes Real Property in the amount of $7 million under the jurisdiction of the Civil Works Division, Office, Chief of Engineers, Department of the Army.

This $29.7 billion does not indicate present market value. Some of the land now owned by the military departments was donated, such as Governor's Island which was donated to the Army by the State of New York and some of the land was withdrawn from the public domain. There is no cost for public domain lands and in many instances no costs, or only nominal costs, for donated lands. Land and buildings in some cases were acquired a century or more ago when land prices and building costs were only a fraction of today's prices and costs. Cost data, in some instances, include estimates from old records, and are not always precisely accurate representations of original cost.

Offsetting this tendency to understate real property values is the fact that no allowance for loss of value as a result of depreciation is reflected. However, because the data represent an inventory as of a given date, they do not include costs of structures which were demolished prior to that date. As additional construction or acquisition is accomplished, it is written into the inventory at the cost to the Government. The original cost figure is of significance as an historical measure of the military real property holdings of the Department of Defense, and in the absence of current appraised valuations (which would be very costly and of doubtful utility), is the only monetary measure of the Federal proprietary interest.

The data on cost to the Government do not include amount of rentals paid nor the value of the property under lease. These data do include, however, costs of any improvements made and owned by the Government on the leased properties.

At the request of the House Committee on Government Operations, an estimate has been made of the current value of the donated land and of the public domain land which is controlled by the Department of Defense. These estimates for either public domain or donated lands are not included in the $151.4 billion book value total of the real and personal property ror military use or the $6.4 billion total for civil functions.

The estimates for public domain lands are shown in Tables 4 and 5. Table 4 shows total estimates for military and civil functions separately, and Table 5 distributes the estimates for military functions by military department.

Tne estimates for the lands donated to the Department of Defense are shown in Tables 6 and 7. Table 6 shows total estimates for military and civil functions separately, and Table 7 distributes the estimates for military functions by military department.

The types of activities on the donated lands used for military and civil functions include:

Military Functions

Reserve Training Centers
National Guard Training
Military Headquarters
Hospitals
Depots
Industrial College of the Armed Forces
Naval Air Stations
Naval Stations
Shipyards
Housing Annexes
Radio Ranges
Cemeteries

Civil Functions

Flood Control
Navigation
Harbors
Harbor and Port Terminals
Storage

1/ Less than $500.

(b) Real Property in Foreign Countries - The $3.8 billion investment in real property in friendly foreign countries represents the cost of that real property to the United States. It consists of troop and family housing, storage facilities, airfields, maintenance facilities, hospitals, and various other kinds of real property required by our armed forces overseas.

International agreements which make it possible to station our armed forces in friendly countries provide the basis for their occupancy of real property in those countries and United States investment in such real property. In recent years negotiation of such agreements has provided some recognition of the residual value of United States facilities constructed with appropriated funds. Occupancy, in effect, is on a term basis varying from month to month (revocable at the sole discretion of the host government) to a firm term of 99 years. Areas occupied vary from simple privately-owned space to large holdings of host governments.

In occupied territories some occupancies have been effected through the use of requisitions. These programs are financed by the governments of the occupied countries with their own currency, such as the Deutsch Mark financed properties improved or constructed in West Germany. (Notwithstanding the recently acquired sovereignty of West Germany, these arrangements are still in effect as an interim agreement.) This report includes only the cost, if any, to the United States of properties in occupied territories.

During the past few years, a number of properties in Japan, Korea and West Germany have been released by the Department of Defense to the governments of these countries.

In certain countries, title to improvements constructed by the Department of Defense is vested in the United States until termination of agreements by which occupancy was established. Upon expiration of such an agreement disposition of the property is accomplished in accordance with terms of the agreement. (Title may pass automatically to the host country or the property may be removed or sold by the United States or its ultimate disposition may be left open for further negotiations.) In other instances residual value clauses provide that, upon termination of agreements, the host government agrees to pay the residual value of the improvements constructed by the Department of Defense in such amounts as may be jointly agreed upon by the host government and the United States.

These facts emphasize the desirability of awareness that our real property in foreign countries is carried on the books of the Department of Defense and in this report at its cost to the United States. The physical facility represented by an investment in a foreign country may be identical with a facility within the United States owned by our Government but it represents a very different type of an investment. It is an investment arising from the world situation at the time it was made and the resulting national commitments of the United States.

The report does not include any investment by the United States for Infrastructure (the NATO common infrastructure program), which is a term used to identify the fixed military facilities needed to support effective combat operations by the integrated NATO forces. Construction costs for Infrastructure facilities are shared by all NATO nations. Actual construction is the responsibility of the nation in whose territory a project is located.

(c) Ownership and Status - The figures in Table 3 show that on a cost basis more than three-fourths (76.0 percent) of the military real property controlled is located within the Continental United States. Of the remainder, 11.2 percent is in Alaska, Hawaii and possessions and 12.8 percent in foreign countries. About one-third of the world-wide increase during the year was in properties outside Continental United States.

The distribution by military department of the world-wide military real property of the Department of Defense has continued to change slightly with the Air Force total moving up more rapidly than that for the other two military departments. A large part of this is accounted for by construction, which has been larger for the Air Force during recent years than for the other two military departments. As of one year ago, the proportions were 32.8 percent for Army, 31.8 percent for Navy and 35.4 percent for the Air Force. Corresponding proportions for 30 June 1959 were 31.6 percent Army, 30.4 percent Navy and 38.0 percent Air Force.

On a dollar cost basis, Army controlled the largest portion (35.9 percent) of the Department of Defense total within Continental United States, Navy has the largest part (41.7 percent) of properties in Alaska, Hawaii and possessions, and Air Force controls most of the Defense total (70.6 percent) in foreign countries.

It should be pointed out that from the standpoint of construction, Air Force installations are generally newer than those of either of the Army or Navy, and thus, their costs are generally fairer representatives of current value. Some of the facilities transferred to the

Air Force, however, would fall into the category of rather old structures for which original costs are not truly representative of current values.

The cost of properties in non-industrial installations (training centers, depots, hsopitals, command headquarters, ports, housing, etc.) were four-fifths of the cost of all properties on a world-wide basis. Reference to Table 8 shows that properties located at installations in an inactive or standby status on a world-wide basis cost $2.5 billion, 8.4 percent of all properties. This proportion in fiscal years 1958 and 1957 was 7.3 percent and 6.1 percent respectively.

(d) Types of Properties - Table 9 shows the military real property costs for the entire Department of Defense by broad geographical locations and by major facility groupings. Nearly one-fourth of the over-all total consists of utilities and ground improvements; the latter is made up mainly of roads and walks.

Table 10 shows the ten categories of real property, listed in order of cost, in which the Department of Defense has the largest dollar investment. These data are illustrated in Chart 4. These ten categories on a world-wide basis represent a total cost of $18.9 billion or almost two-thirds (63.8 percent) of the cost of all Defense-controlled real property. Troop housing continues to be the largest single category followed by airfield pavements and maintenance facilities. Comparable data are presented for each of the military departments in Tables 21 (Army), 25 (Navy) and 29 (Air Force).

The cost of land controlled by the Department of Defense represents only 2.3 percent of the total cost of all real property controlled

Chart 4

COST OF THE TEN LARGEST CATEGORIES OF DOD REAL PROPERTY WORLD-WIDE

AS OF 30 JUNE 1959

by the Department of Defense. Cost of buildings, on the other hand, represent 53.4 percent of the total costs of military real property controlled. Other improvements such as airfield pavements, utility systems, and roads and streets account for 44.3 percent. Table 11 shows these building costs by broad geographical areas and by military department. In the Continental United States total costs of buildings for the Army are highest, whereas, within the Alaska, Hawaii and possessions group and in foreign countries those for the Air Force are highest.

(e) Lease Rentals - The rental data in Table 13 indicate that rentals received, on a world-wide basis, represent 42.0 percent of the amount paid in rentals shown in Table 12. The total world-wide annual rental bill paid for properties used by the Department of Defense increased from $28 million on 30 June 1958 to $31 million on 30 June 1959. Rentals received from properties leased to others also increased from $9.0 million to $13.2 million.

(f) Acreage Controlled - The Department of Defense through the three military departments controlled a total of 31.3 million acres of land throughout the world on 30 June 1959 (Table 14), a decrease of 1.2 million acres or 3.7 percent from that reported a year earlier. This drop, together with the 2.5 million acre reduction during the preceding year, reflects current policy of releasing those lands no longer required.

During the year, Air Force acreage holdings decreased about 987 thousand, most of which (849 thousand) was the result of release of

1/ Excludes 4,848,361 acres under the jurisdiction of the Civil Works Division, Office, Chief of Engineers, Department of the Army.

2/ Excludes 539 acres under the jurisdiction of the Civil Works Division, Office, Chief of Engineers, Department of the Army.

public domain land in Idaho and Wyoming. Army holdings decreased 251 thousand acres and Navy increased about 24 thousand. An over-all reduction of 1,472 thousand acres was recorded in Continental United States during the year, while increases of 83 thousand and 175 thousand acres occurred in Alaska, Hawaii and possessions and in foreign countries, respectively.

The largest change recorded on a world-wide basis was in public domain, a decrease of 1.6 million acres. The other decrease on a world-wide basis was in leased lands which were reduced 481 thousand acres. These two decreases were partly offset by increases of 627 thousand acres in the other types of land (owned, easements, etc.). The distribution of world-wide acreage controlled by the Department of Defense is illustrated in Chart 5 and in Table 14.

Total holdings include land owned, from the public domain, used on a temporary permit, leased and various occupancy rights (easements and foreign rights of different types). Table 15 shows the type of occupancy of the land on a geographic basis.

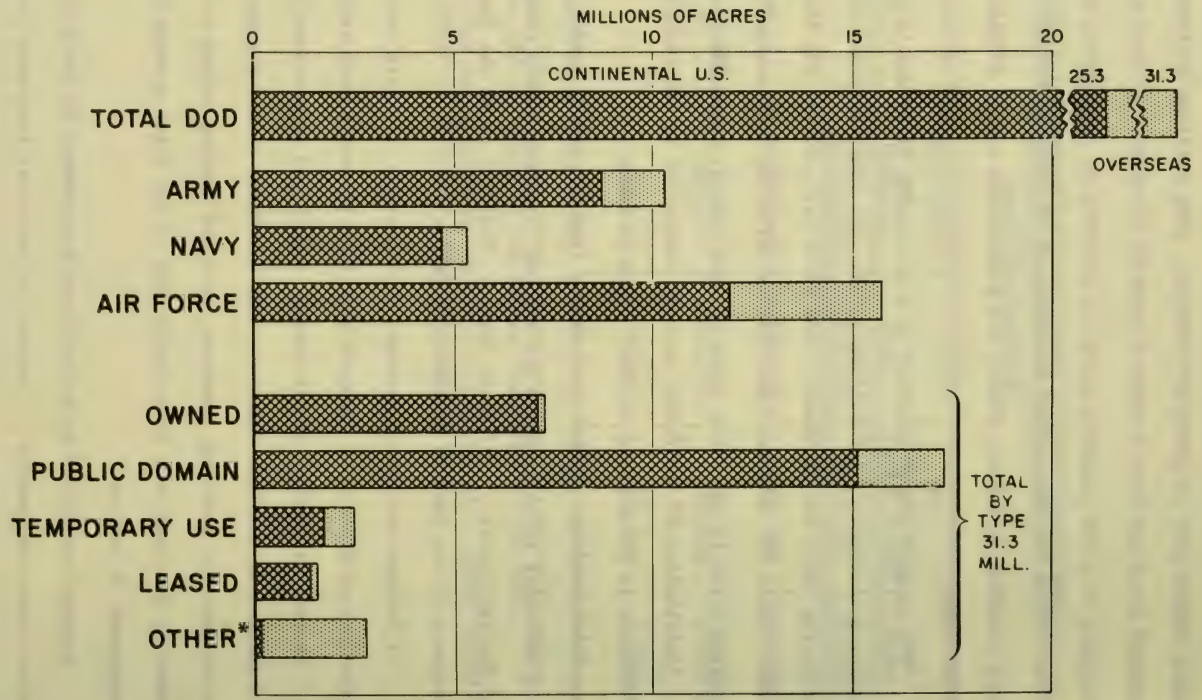

Of Defense-controlled acreage, 80.9 percent is within the Continental United States, as compared with 82.4 percent a year earlier, 11.1 percent is located within Alaska, Hawaii and possessions, and 8.0 percent in foreign countries. The Air Force need for space to accommodate air training, maneuver, test and bombing ranges is illustrated by the fact that it controls half of the total acreage of the Department of Defense.

Acreage controlled by the military departments in the Continental United States represents 1.3 percent of the total land area in the

48 States and the District of Columbia. The 25,324,292 acres owned or leased, or under permit, represent about 39,569 square miles. The relationship of the Defense-controlled lands to the total acreage in the Continental United States is shown in Table 16.

In each of five States within Continental United States the Department of Defense controls more than one million acres. The five are, in order of magnitude of acreage controlled, Nevada, California, Arizona, New Mexico and Utah. Total acreage in these five States under Department of Defense control is 17.8 million representing 70.4 percent of total Defense-controlled acreage in the Continental United States. Table 17 lists the States and the District of Columbia within Continental United States, showing for each the total cost and acreage included in Defense-controlled real property.

The five States in which the Department of Defense has the largest real property dollar investment in order of magnitude of investment are California, Texas, Virginia, New York and Florida. Florida now replaces Maryland as the fifth in magnitude of investment. Total costs of the military real property controlled in these five States represents 35.4 percent of the Continental United States total.

3. Department of the Army

Real properties owned and controlled on a world-wide basis by the Department of the Army on 30 June 1959 cost $9.4 billion, a 6.3 percent increase over the $8.8 billion one year earlier. Of the Army world-wide total, 86.4 percent was located within the Continental United States,

1/ Land and improvements.

6.7 percent in Alaska, Hawaii and possessions, and 6.9 percent in foreign countries. These were approximately the same proportions as during each of the two preceding years.

Annual rentals paid by Army for property it was leasing at 30 June 1959 were up from $20.5 million one year earlier to $22.2 million. One-fourth of the rental cost is offset by the $5.6 million Army receives in rentals for its property leased to other users. The increase in rentals paid during the year ending 30 June 1959 is due primarily to housing requirements at anti-aircraft defense sites in Continental United States and to housing and administrative requirements overseas. The Army annual rental bill for properties in foreign countries amounted to $6.0 million as of 30 June 1959. Since June 1955 the Army rental bill in foreign countries has been reduced more than one-half, as a result of termination of leases of properties no longer required.

Total world-wide acreage under Army control at 30 June 1959 was 10.3 million acres; 84.9 percent within the Continental United States, 10.2 percent in Alaska, Hawaii and possessions, and 4.9 percent in foreign countries. An over-all decrease of 2.4 percent occurred during the year ending 30 June 1959. A drop of 284 thousand acres in Continental United States was partly offset by an increase of 33 thousand acres in all other areas.

Military real property under Army control within the Continental United States as of 30 June 1959 had a total cost of $8.1 billion, an increase of 6.0 percent over the $7.6 billion for a year earlier. The proportion of Army installations in active status, on a dollar cost

basis, at the close of the year within Continental United States was 81.7 percent. This was down slightly from the 82.7 percent for a year earlier. Table 18 presents cost and rental data reported by the Army for the military real property under its control within the Continental United States on 30 June 1959.

On a basis of cost to the Government, Army's non-industrial installations within the Continental United States constituted 71.0 percent of the cost of all Army installations in Continental U. S. The dollar total of the industrial type installations remained at $2.3 billion. The Government operated 41.5 percent of the industrial type active installations on a cost basis, whereas 58.5 percent was operated by contractors.

Annual rentals paid by Army for property it leases in Continental United States, amounting to $16.0 million, was offset considerably by rentals received in the amount of $5.3 million. About 82 percent of the rentals received were from industrial properties.

The total acreage controlled by Army within the Continental United States is reported in Table 19 by status and by type of tenure and installations. In the year ending 30 June 1959, the Army-owned acreage within Continental United States decreased about 15 thousand acres, mostly at industrial installations. A drop of 298 thousand acres of land under permit resulted in part from release of acreage and in part from permanent withdrawal of certain acreages previously held on permit. Acreage held on lease was reduced from 578 thousand at 30 June 1958 to 421 thousand on 30 June 1959.

The acreage and cost to the Government of the military real property controlled by Army in each of the States and the District of Columbia within Continental United States is shown in Table 20. Six States, ranked in size by cost of Army real property, were Virginia, Texas, California, Maryland, New York and New Jersey. The cost of the properties in these States constituted 34.2 percent of Army's total Continental United States cost. The total acreage (5.7 million) controlled by Army in the six States each having over one-half million acres; i.e., New Mexico, California, Arizona, Texas, Utah and Georgia, constituted 65.8 percent of its Continental United States acreage. Virtually all (95.7 percent) of the public domain land under Army control was located in the four States of New Mexico, Arizona, California and Utah.

The ten categories of real property in which Army has the greatest dollar investment in Continental United States are presented in Table 21. They are illustrated in Chart 6 along with Navy and Air Force data. The total cost represented by the ten largest Army categories is $5.5 billion, 67.8 percent of the total Army Continental United States cost.

The production facilities as a functional group represents the largest category, on a cost basis, of properties held by the Army in this country. This category consists of the specific plants, shops and manufacturing enterprises which are in operation at non-industrial installations as well as those at industrial installations. With the acquisition of considerable Wherry housing and the completion of numerous units under construction, family housing moved during the year from eighth to fifth place on a cost basis.

Chart 6

COST OF 10 LARGEST CATEGORIES OF REAL PROPERTY

CONTINENTAL U.S.

AS OF 30 JUNE 1959

See Tables 21, 25 and 29.

Department of the Army real properties outside the Continental United States represented a cost of $1.3 billion on 30 June 1959, as compared with $1.2 billion one year earlier. Slightly more than half (50.6 percent) of the cost of properties outside Continental United States was in foreign countries.

Army retained a large block of Alaskan land under public domain withdrawal and temporary use permit. It also exercised base rights on 509 thousand acres in foreign countries, which was an increase of 26 thousand acres over last year.

Troop housing continued to comprise the Army's largest cost category in areas outside Continental United States. On a cost basis, 97.5 percent of the properties in areas outside the Continental United States were at active installations.

4. Department of the Navy

Real property controlled and used by the Navy on a world-wide basis cost $9.0 billion, an increase of 5.5 percent over that reported one year earlier. Of the $471 million increase, 41.2 percent was in Continental United States, 30.4 percent in Alaska, Hawaii and possessions, and 28.4 percent in foreign countries.

Annual rentals received by the Navy on a world-wide basis, as of 30 June 1959, amounted to $5.9 million as compared to rental payments of $3.6 million a year earlier. Rental receipts from the industrial properties increased sharply.

Navy's acreage controlled, on a world-wide basis, was 5.3 million acres; about one-half the amount of acreage under Army control and

one-third the acreage under Air Force control. During the year, Navy world-wide acreage increased 24 thousand acres.

On a cost basis, 79.4 percent of Navy-controlled property is located within the Continental United States. Table 22 presents data showing costs and rentals for Navy-controlled installations in the United States by non-industrial and industrial types.

Cost of Navy properties controlled within the Continental United States on 30 June 1959 amounted to $7.2 billion, an increase of 2.8 percent over that reported for 30 June 1958. Inactive properties in the Continental United States, on a cost basis, comprised 3.6 percent of the total Navy real properties as compared with 3.5 percent a year ago. On a cost basis, the Navy industrial facilities comprised 37.1 percent of the Navy real properties within Continental United States. Of the cost of Navy industrial properties within Continental United States, only 5.6 percent were in an inactive or standby status.

Of the total acreage Navy had under its control within the Continental United States on 30 June 1959, 27.1 percent, 1.3 million acres, was owned outright. During the year an adjustment occurred whereby a large amount of land was reclassified from the public domain (permanent withdrawal) to the temporary use category. The amount of land under lease dropped from 391 thousand acres on 30 June 1958 to 223 thousand on 30 June 1959. The data in Table 23 provide certain detail relative to Navy acreage by type of tenure and installation. Of total acreage controlled by the Navy in Continental United States, 97.9 percent is located at installations which were in an active status.

In Table 24 data are presented showing State detail as to total cost and acreage of the military real property controlled by Navy within Continental United States. On the basis of cost, 55.1 percent of Navy's total real property investment in the Continental United States is in the six States of California, Virginia, Pennsylvania, Maryland, Florida and New York. The States are ranked in order of amount invested. The heavy concentration of naval activities in the State of California is well illustrated by the fact that 24.8 percent of the Continental United States total cost is represented by California installations which have an acquisition cost of $1,775 million. In terms of acreage, 54.8 percent of the Navy Continental United States total was California land. The next largest amount was in Nevada, which represents 23.8 percent of Navy Continental U. S. total. About 95.8 percent of the Navy public domain was in California and Nevada.

The ten categories representing the greatest cost to Navy are shown in Table 25 and are illustrated in Chart 6. In total, they constituted 59.7 percent of the over-all Navy real property costs in the Continental United States, as compared with 60.0 percent one year earlier. The broad diversification of Navy activities in the country is illustrated by the data in Table 25. While shipbuilding is one of the Navy's leading peacetime activities and accounts for a large part of Navy's industrial activity, there are numerous other activities of importance within the industrial field, namely, ordnance plants, various test stations(underwater laboratories, torpedo, radar,

3/ Piers and wharves; excludes seawalls, bulkheads and other waterfront facilities.
4/ Feet Berth

electronics, ballistics, etc.), powder factories, ammunition depots, and other munitions type production. Within Continental United States, the largest Navy amount is invested in the maintenance facility category.

Of the Navy real property total, 20.6 percent ($1.8 million) was outside Continental United States. Of this total, $1,387 million was in Alaska, Hawaii and possessions and $469 million was in foreign countries as of 30 June 1959. The Navy controlled 309 thousand acres in Alaska, Hawaii and possessions and 321 thousand in foreign countries on 30 June 1959. The ten largest categories of real property in Alaska, Hawaii and possessions represent a cost to the U. S. Government of $959 million, and in foreign countries, $324 million.

5. Department of the Air Force

World-wide real property under Air Force control on 30 June 1959 cost the Government $11.3 billion. This represented, as indicated earlier in the report, 38.0 percent of the Department of Defense total. A part of the 18.6 percent increase ($1.8 billion) over that of one year earlier was attributable to completion and transfer to inventory of properties constructed during recent years. About 68 percent of the total increase was recorded in properties within Continental United States.

Air Force annual rentals paid for property world-wide increased during the year ending 30 June 1959 from $5.0 million to $5.6 million. Reductions in rentals paid within Continental United States were more

than offset by increases in foreign countries. About 31 percent of the world-wide rental bill is offset by receipts from properties leased to others in the amount of $1.7 million.

Land controlled by the Air Force all over the world totaled 15.7 million acres on 30 June 1959, a drop of 5.9 percent from the 16.7 million acres reported a year earlier. Part of the 1.1 million acre reduction within Continental United States was offset by an increase of 96 thousand acres in foreign countries.

The data in Table 26 show that Air Force controlled military real property within the Continental United States represented a cost to the Government of $7.3 billion, as compared with the $6.1 billion a year earlier. Of the total world-wide Air Force investment, about two-thirds covered installations within Continental United States.

Of the Continental U. S. total investment, 5.3 percent is at inactive and standby installations. Industrial activities under Air Force control, all of which are contractor operated, constituted 10.3 percent of the Continental United States total Air Force property cost. On a dollar basis, 18.2 percent of the Air Force industrial investment was covered by inactive and standby plants.

Air Force-controlled acreage within the Continental United States was approximately 12 million acres on 30 June 1959. The over-all decrease of 1.1 million acres within Continental United States during the year was largely reflected in reductions of 930 thousand acres of public domain land and 152 thousand acres of leased land. Of the 15.1 million acres withdrawn from public domain for Department of

1/ Land and Improvements.
2/ Includes excess and standby.

Defense use within Continental United States, the Air Force controlled 60.5 percent. Much of this land is used for missile ranges and advanced fighter bomber training. Table 27 provides additional detail on categories of lands held by the Air Force.

Land at inactive installations constituted only 1.4 percent of the total Air Force-controlled lands within Continental United States as compared to 5.0 percent one year ago.

The State pattern of military real property controlled by the Air Force is shown in Table 28. Some degree of concentration is suggested by the fact that the cost of the properties controlled in the five States of California, Texas, Florida, New York and Ohio constituted 38.7 percent of the Air Force's United States total. The Air Force had more than $300 million invested in each of these States.

The acreage of land controlled in four States, each with over one million acres -- Nevada, Arizona, New Mexico and Utah -- comprised 75.0 percent of the total Air Force-controlled acreage in this country. Nearly 92 percent of the Air Force controlled acreage in these four States was land from the public domain.

On the basis of cost, Table 29 presents the ten largest categories of Air Force-controlled real property. The comparisons are shown in Chart 6. The total cost of these ten major categories represented 69.2 percent of the Air Force total cost within this country. Airfield pavements accounted for 17.5 percent of the total Air Force investment within Continental United States. Maintenance facilities was the second largest category followed closely by troop housing.

2/ Excludes liquid fuel, ammunition, and cold storage.
3/ Includes operating plants and distribution lines.

Air Force-controlled properties outside the Continental United States, on the basis of cost, amounted to $4.0 billion at 30 June 1959 as compared with $3.4 billion at the previous year end. The overseas amount was 35.3 percent of the world-wide Air Force real property cost. Of Air Force properties outside Continental United States 67.2 percent was located in foreign countries. About 71 percent of the Department of Defense investment in real property in foreign countries was under Air Force control.

Air Force-controlled properties in many foreign countries represented leases of relatively small acreages. Foreign base rights of varying types in 32 different countries involved 1.7 million acres of land. Acreage controlled by Air Force in Alaska, Hawaii and possessions amounted to 2.1 million acres. Airfield pavements constituted the single largest Air Force investment outside the Continental United States. Troop housing was next in cost.

Section B - Construction in Progress

The cost of work in place, as reported by the military departments, on construction projects which had been started but not completed and transferred to the inventory is shown by geographical area in Table 30. The cost reported represents the cost of labor and materials incorporated on the construction projects. The Federal Government has a property interest in these projects -- most of them are being build on Government-owned land.

Against this property interest the military departments have made cash payments in the form of progress payments to the contractors and

2/ Excludes $6 million cost of work in place on Civil Works projects.

3/ Includes facilities completed but not yet transferred to real property inventory.

the unpaid balance due for the work completed by the contractor is carried as accounts payable.

Upon satisfactory completion of the project and acceptance by the military department, the total cost of the completed project is added to the Real Property Inventory Account of the respective department.

PART II - MILITARY PERSONAL PROPERTY

Section A - Inventory of Military Equipment and Supplies in the Consolidated Supply Systems and in Stock Funds

1. General

This section of the report deals with the inventories in the supply systems of the military services. For each of the four military services, dollar data are presented in terms of the major purposes for which the supplies and equipment are held, e.g., peacetime operating stock, mobilization reserve stock, economic retention stock, contingency retention stock, excess stock not yet transferred to property disposal, and claimant stock. The inventories are also subclassified into broad commodity categories representing families of similar kinds of items.

Inventories are accounted for in the supply systems of the military services from the time of acceptance by the service until they have been issued to a using unit. The supply system inventories are those being held in the storage or warehousing facilities of the military service for issue to the consumer. They constitute that segment of the over-all materiel supply system which is defined in the Joint Chiefs of Staff dictionary as the "phase of military supply which extends from receipt of finished supplies by the military services through issue for use or consumption".

The stocks are physically located at depots, posts, camps, stations and bases in the Continental United States, Alaska, Hawaii and possesions, and in foreign countries. They are stored in warehouses, open storage spaces, ammunition dumps, fuel tanks, etc.

Supply items which have been issued to the consuming military units,

such as divisions, air-wings and most ships, are not considered as assets of the supply system. These items are in the hands of the ultimate user and as such are carried as station properties or in the individual unit inventories where they remain until consumed, destroyed, captured, lost or otherwise disposed of. Part II, Section B, of this report presents data on inventories which have been issued from the supply system to the ultimate users. If such an item in a military unit becomes unserviceable, it is normally replaced by a serviceable item from the supply system. The unserviceable item is returned to the supply system where it may be repaired and put back in supply channels or declared excess and disposed of.

Also not included in the supply inventory totals is the value of surplus personal property which has been turned over to property disposal officers and is awaiting disposition. Table 44 in Part II, Section D, shows the value of such property. This surplus property represents excess transferred from the supply system, and transfers from equipment in use and from industrial funds.

Stock Funds - Stock funds do not constitute a separate supply system. They are operational and financial devices employed by the military services principally to facilitate financial control over consumption-type supply items for which there is recurring demand. The stock fund mechanism permits the military services to handle inventories of such continuous demand items on a replacement basis much as private business firms do when they replace stocks depleted by sales with new stocks purchased with the proceeds from such sales. Because of the widespread interest in stock fund operations as a means of improving supply and fiscal management and of controlling

of inventories, data representing stock fund inventories for each military service are shown separately in this section. The stock fund inventories are also included in the over-all totals for the entire supply system of each military service.

Reporting of Categories and Inventory Accounts - Data representing the dollar value of inventories in the aggregate supply system, both the items which are financed by stock funds and those financed from appropriated funds, are shown for each of the military services in the tables in this section.

Each of these tables show the dollar amount of inventories in each major commodity category (groupings of similar kinds of supplies and equipment) and in each strata (groupings according to the purpose for which the supplies are retained).

The stratification accounts in use by the military services are uniform, and are (1) Peacetime Operating, (2) Mobilization Reserve, (3) Economic Retention, (4) Contingency Retention, (5) Excess,and (6) Claimant stocks. In addition, stocks in-transit and stocks in hands of contractors are also accounted for and reported by the Army and Navy. These inventory accounts are defined as follows:

a. Peacetime Operating Stocks are stocks in depots and posts, camps and stations held for issue to using units to equip and train the planned peacetime United States Forces.

b. Mobilization Reserve Stocks are stocks held for the account of that portion of the Mobilization Reserve Materiel Requirement for which procurement is authorized. They include the prepositioned stocks held in

specific locations in condition for immediate shipment or use.

c. Economic Retention Stocks are stocks in long supply which are being retained to meet future requirements since it is more economical to retain them than it is to dispose and later have to purchase them.

d. Contingency Retention Stocks are stocks in long supply for which there is no programmed requirements but which should be retained for military or defense contingencies. Only military type items, that is, items not ordinarily produced commercially for civilian consumption, may be placed in the contingency retention category.

e. Excess Stocks are stocks classified as excess to the needs of a military service but not yet disposed of or, as in the case of the Army, stocks excess to the needs of an Army Command but not necessarily excess to the Army supply system. In this year's report, all the stocks that have been determined to be surplus or foreign excess (the designation of surplus stocks in overseas areas) that have been transferred to property disposal officers for sale or other dispostion, are shown on Table 44 and are no longer included in the supply systems tables.

f. Claimant Stocks are stocks on hand in a military service which are being held for another service or government agency (such as Atomic Energy Commission). Stocks held for reserve components are not carried in this claimant classification but are combined with those of the military service.

In-transit stocks are those to which title has passed to the military service, which are enroute (a) from manufacturers or suppliers, but which have not been physically received; (b) from Continental United States

depots to overseas commands or vice versa; (c) from Continental United States depots to Continental United States commands or vice versa; and (d) among Continental United States depots which have not been reported as received by the consignee depots.

2. Department of Defense Summary

The total value of Department of Defense supply system inventories was reduced by $3.2 billion during Fiscal Year 1959, from $47.7 billion on 30 June 1958 to $44.5 billion as of 30 June 1959. This reduction was composed of a decrease in value of Stock Fund inventories of $0.8 billion and a decrease in value of Appropriated Fund inventories of $2.4 billion. Of the $3.2 billion decrease, Army accounted for $1.6 billion, Navy and Marine Corps for $1.2 billion, and Air Force for $0.4 billion.

Table 31 shows that Army held the largest part of the total value of supply system inventories, $18.6 billion or 41.9 percent, Navy and Marine Corps together accounted for $13.6 billion (30.4 percent), and Air Force for $12.3 billion (27.1 percent).

The total value of Stock Fund inventories was $8.2 billion, compared to $36.3 billion in Appropriated Fund inventories. More than two thirds (67.5 percent) of the value of Stock Fund inventories were held by Army including all Department of Defense wholesale stocks of subsistence and clothing and textiles; Navy and Marine Corps including all the Department of Defense wholesale stocks of medical and dental materiel accounted for 27.1 percent; and Air Force accounted for only 5.4 percent. Of the Appropriated Fund inventories, 36.1 percent belonged to Army; 31.2 percent to Navy and Marine Corps; and 32.7 percent to the Air Force. These data are presented in Chart 7.

Table 31.--Supply System Inventories - by Source of Funds and Military Service
As of 30 June 1959

DEPARTMENT OF DEFENSE

Air Force	12,320	437	11,883

1/ Includes $263 million Shipboard Supplies not included in Navy Supply System inventory data.

Chart 7

DOD SUPPLY SYSTEM INVENTORIES BY SERVICE

AS OF 30 JUNE 1959

a/ Includes $263 million Shipboard Supplies not included in chart of Navy Supply System Inventories.

Table 32 shows that, as of 30 June 1959, 37.2 percent of the value of the distributed portion of the supply system inventories were classified as Peacetime Operating; 28.0 percent Mobilization Reserve; 15.3 percent Economic and Contingency Retention; 17.4 percent Excess; and 2.1 percent Claimant Stocks.

Major differences in the percentage distribution of inventories and that of the previous year were a reduction of 6.2 percent in Excess stocks and increases in Peacetime Operating and Claimant stocks of 4.3 percent and 1.2 percent respectively.

3. Army Supply System Inventories

The data in the summary table (Table 33) representing Army inventories cover all depot inventories and all significant-sized station inventories (all stations with financial inventory accounting). More than one third of Army's over-all total was in the Ordnance Corps categories of ammunition, guided missiles, and related parts. Other large categories, each with inventories of over a billion dollars were: (1) Vehicle Parts; (2) Tanks; (3) Quartermaster Clothing and Textile Materiel (wholesale single manager stocks); and (4) Signal Corps items.

The total reduction in inventories of $1.6 billion during fiscal year 1959 was accounted for by a decrease of $0.6 billion in Stock Fund inventories and a decrease of $1.0 billion in Appropriated Fund inventories.

As of 30 June 1959, 25.9 percent of the distributed portion of Army's supply system inventories were classified as Peacetime Operating stock; 40.6 percent Mobilization Reserve; 7.8 percent Economic Retention; 21.3

Undistributed Inventories	361,951	2/ 361,951	---	---	---	---	---	---

1/ Excludes $332 million "Stocks in Hands of Property Disposal Officers" included in Table 44.
2/ Not stratified as of 30 June 1959.
3/ Stock excess to one Army Command but not necessarily excess to Army Supply System.

percent Excess; and 4.4 percent Claimant stocks. Chart 8 shows the Army supply system inventories by these major classifications.

Major differences in percentage distribution of inventories from that of the previous year were a reduction of nearly 10 percent in Excess stocks and increases of 3.4 percent Mobilization Reserve, 3.0 percent Claimant, and 2.7 percent Peacetime Operating stock.

Army Stock Fund Inventories - Included in the $18.6 billion inventories shown in Table 33 are $5.5 billion carried in the Army Stock Fund. This $5.5 billion of stock fund inventories in the Army represented 29.6 percent of the total inventories reported by the Army in its supply system.

About 41.9 percent of the Army Stock Fund inventories was in the Quartermaster Corps category, which includes the stocks of the single managers of subsistence, clothing and textiles. The Ordnance Corps group of categories amounted to $1.9 billion representing 34.5 percent of the total Army Stock Fund.

Of the distributed portion of the Army Stock Fund inventories on 30 June 1959, 24.3 percent was classified as Peacetime Operating; 35.6 percent Mobilization Reserve; 9.1 percent Economic Retention; 27.5 percent Excess; and 3.5 percent Claimant stocks.

4. Navy Supply System Inventories (excluding Marine Corps)

For inclusion in this report, Navy's supply system inventories are grouped into 29 major categories. In addition, the inventories are stratified into six accounts, other than undistributed stocks, to indicate the broad retention groups into which the Navy inventories are divided.

1/ Excludes $211,466 thousand "Stocks in Hands of Property Disposal Officers" included in Table 44.

2/ Not stratified as of 30 June 1959.

3/ Stocks excess to one Stock Fund Division or a Stock Fund Branch, but not necessarily excess to the Army Supply System.

A brief review of the data in Table 35 indicates that the category of Major Ordnance Equipment and Explosives, totaling $4.7 billion, constituted the largest single supply category (39.3 percent) of the Navy supply system inventory. The only other category of inventory valued at over a billion dollars was Aeronautical Material which totaled $2.5 billion. These two inventory categories together constituted 60.4 percent of the total Navy supply system inventories on 30 June 1959.

The total amount reported for the Navy's supply system inventories when compared with the amount reported in last year's report will show that the total inventories decreased $59 million. However, included in the Navy's supply system inventory data in this year's report was $742 million in aircraft spare engines and $206 million of production equipment in the supply system which were excluded from supply inventory data in last year's report. Navy inventories other than aircraft spare engines and production equipment showed a reduction of about $1.0 billion from the previous year.

Peacetime Operating stocks increased $237.1 million during the fiscal year and Contingency Retention stocks increased $617.8 million. Mobilization Reserve stocks decreased $79.5 million; Economic Retention stocks decreased $766.3 million; Excess stocks decreased $209.9 million; Claimant stocks decreased $27.9 million; and the Undistributed stocks increased $169.2 million with the inclusion of production equipment. Peacetime Operating and Mobilization Reserve stocks together represented 68.2 percent of the total distributed Navy stocks. Navy supply system inventories are presented in Chart 9.

Chart 9

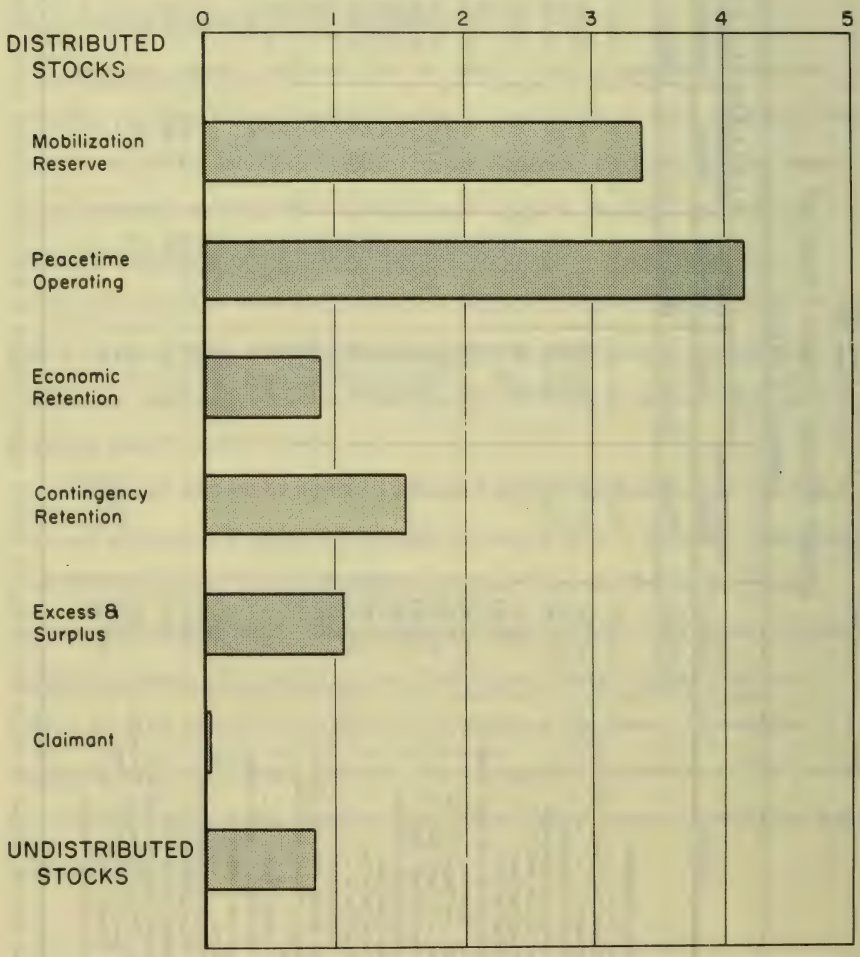

SUPPLY SYSTEM INVENTORIES

(Including Stock Funds)

DEPARTMENT OF THE NAVY

AS OF 30 JUNE 1959

BILLIONS OF DOLLARS

As of 30 June 1959, 37.6 percent of the distributed portion of the Navy's supply system inventories were classified as Peacetime Operating; 30.6 percent Mobilization Reserve; 7.9 percent Economic Retention; 14.0 percent Contingency Retention; 9.5 percent Excess; and 0.4 percent Claimant stocks.

A comparison with fiscal year 1958 show that in percent of total distributed stocks, Peacetime Operating stocks increased about 3 percent and Contingency Retention stocks increased 5.8 percent, whereas Economic Retention stocks and Excess stocks decreased 5.7 percent and 1.7 percent respectively. Mobilization Reserve and Claimant stocks show small percentage decreases.

Navy Stock Fund Inventories (exclusive of the Marine Corps) - Table 36 shows the category and stratification classification of the Navy (exclusive of the Marine Corps) Stock Fund. The Navy Stock Fund carried $1.8 billion or 15.4 percent of the total inventories reported in the Navy supply system.

About 25.1 percent of the Navy Stock Fund inventories was in the Ship's Repair Parts category. Other large categories of stock were General Stores Material (20.0 percent) and the Single Manager Medical Materiel stocks (16.2 percent).

Of the distributed portion of the Navy Stock Fund inventories on 30 June 1959, 29.4 percent were classified as Peacetime Operating; 41.6 percent Mobilization Reserve; 13.9 percent Economic Retention; 7.7 percent Contingency Retention; 6.9 percent Excess; and 0.5 percent Claimant stocks.

5. Marine Corps Supply System Inventories

The Marine Corps supply system inventories are grouped in Table 37 into 11 major categories. In addition, the inventories are stratified into

1/ Excludes $14,918 thousand "Stocks in Hands of Property Disposal Officers" included in Table 44.
2/ Stocks in Transit and Stocks in Hands of Contractors (GFM) - other than those in the Stock Fund - are not available from the Marine Corps Inventory Accounting System or Supply Management Reports.

five accounts, other than undistributed stocks, to show the broad retention groups into which the Marine Corps inventories are divided.

A brief analysis of the Marine Corps supply system data shows that 47.2 percent of the total was represented by the category of Ammunition and Guided Missiles. Other large categories of material were: (1) Ordnance - Tank - Automotive stocks; (2) Communication - Electronic, Electric, and Guided Missile stocks; and General Supply stocks.

The total amount reported for the Marine Corps supply system inventories when compared to the amount reported in last year's report shows that the total supply system inventories decreased $323 million.

The total reduction in inventories was accounted for by a decrease of $13 million in Stock Fund inventories and a decrease of $310 million in Appropriated Fund inventories.

Peacetime Operating stocks and Mobilization Reserve stocks together represented 72.0 percent of the total distributed portion of the Marine Corps stocks. Inventories are presented graphically in Chart 10.

As of 30 June 1959, 14.8 percent of the distributed portion of the Marine Corps supply system inventories were classified as Peacetime Operating; 57.2 percent Mobilization Reserve; 5.7 percent Economic Retention; and 22.3 percent Excess stocks.

A comparison of this distribtuion with that of fiscal year 1958 indicates increases in Peacetime Operating stocks from 10.2 percent to 14.8 percent of total distributed stocks and in Excess stocks from 19.7 percent to 22.3 percent, whereas Mobilization Reserve and Economic Retention groups decreased by 5.4 percent and 1.8 percent respectively.

Chart 10

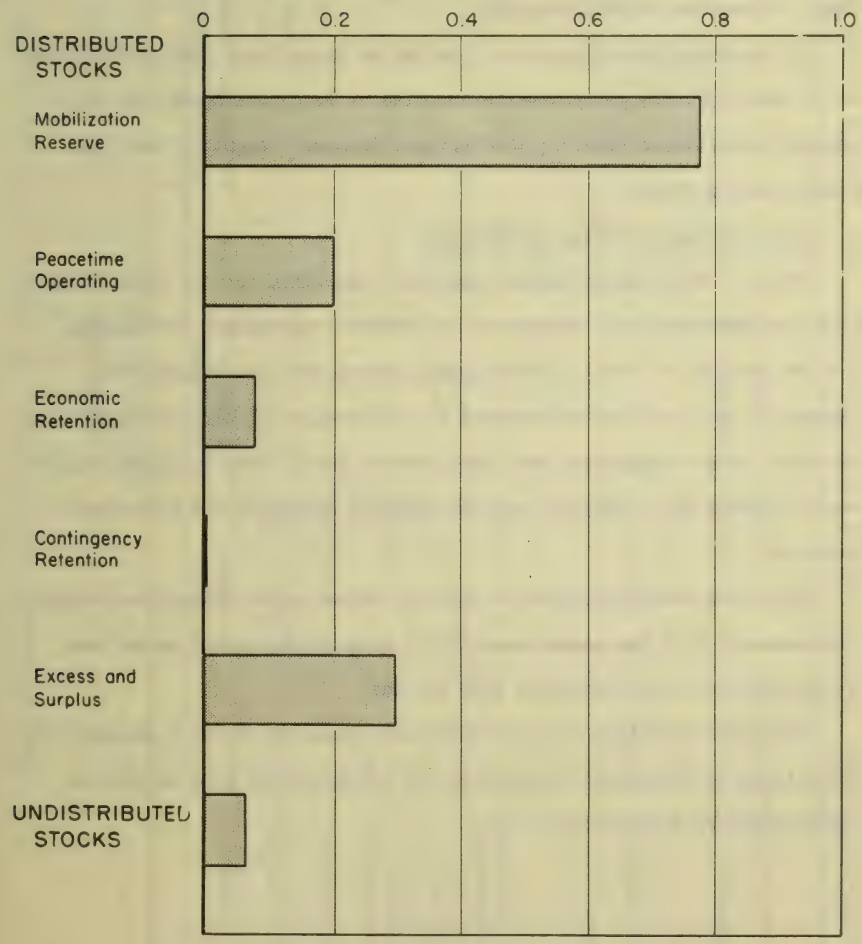

SUPPLY SYSTEM INVENTORIES

(Including Stock Funds)

MARINE CORPS

AS OF 30 JUNE 1959

BILLIONS OF DOLLARS

Marine Corps Stock Fund - Included in the $1.4 billion inventories shown in Table 37 are $392 million carried in the Marine Corps Stock Fund. This $392 million of stock fund inventories represented 27.6 percent of the total inventories reported by the Marine Corps in its supply system.

Approximately 29.5 percent of the Marine Corps stock fund inventories was in the General Supply stocks category and 27.3 percent in the Ordnance - Tank - Automotive stocks category.

Of the distributed portion of the Marine Corps Stock fund inventories on 30 June 1959, 8.3 percent was classified as Peacetime Operating; 21.3 percent Mobilization Reserve; 16.8 percent Economic Retention; and 53.6 percent Excess Stock.

6. Air Force Supply System Inventories

The Air Force supply system inventory, including the Air Force Stock Fund, is presented in 17 categories, or material groupings, in Table 39. A brief analysis of the Air Force supply system data shows that 47.4 percent of the total was represented by the category of Aircraft Components. Two other large categories, each with inventories of over a billion dollars were: Aircraft Spare Engines, and the Weapons, Ammuniton and Propellants category.

The total amount reported for the Air Force supply system inventories when compared with the amount reported in last year's report shows that the total inventories decreased $400 million.

The total reduction in inventories was accounted for by a decrease of $68 million in Stock Fund inventories and a decrease of $332 million in Appropriated Fund inventories.

1/ Excludes $1,336,966 thousand "Stocks in Hands of Property Disposal Officers" included in Table 44.

2/ Includes $21,363 thousand of Stock Fund Items (see Table 40) and $253,470 thousand of Spare Engines in Transit.

3/ Stocks in Transit - other than those of Spare Engines and Stock Fund - and Stocks in Hands of Contractors (GFM) are not available from the Air Force Accounting System or Supply Management Reports.

As of 30 June 1959, 57.2 percent of the distributed portion of the Air Force supply system inventories were classified as Peacetime Operating; 2.4 percent Mobilization Reserve; 21.8 percent Economic and Contingency Retention; 18.3 percent Excess; and 0.3 percent Claimant stocks. Chart 11 shows the Air Force supply system inventories by these major classifications.

A comparison with fiscal year 1958 shows that in percent of total distributed stocks, Peacetime Operating stocks increased about 7 percent whereas Excess stocks decreased by 5.4 percent and Mobilization Reserve stocks by 1.3 percent.

Air Force Stock Fund - Included in the $12.3 billion inventories shown in Table 39 are $437 million carried in the Air Force Stock Fund. This $437 million of stock fund inventories in the Air Force represented 3.5 percent of the total inventories reported by the Air Force in its supply system. About 53.9 percent of the Air Force Stock Fund inventories was in the Aviation Fuels category of stock.

Of the distributed portion of the Air Force Stock Fund inventories, 42.0 percent was classified as Peacetime Operating; 42.8 percent Mobilization Reserve; 10.8 percent Economic Retention; 0.3 percent Contingency Retention; and 4.1 percent Excess Stocks.

Section B - Military and General Equipment Issued for Use (Including Production Equipment)

1. General

Quantitative records are maintained by the military departments of equipment taken from the supply system and issued to units for use. Except for major classes of equipment (recoverable and non-expendable

type items) such as aircraft and ships. Data are not available by specific categories for stock or equipment in the possession of using units or troops. The monetary accounting reports of both Navy and Air Force show a total value only for such stocks. Army does not include its issued stocks and equipment in its monetary accounting system but it does use a periodic statistical report of the quantities of the major items to develop estimates of monetary values.

The total value of equipment in use reported by the military departments as of 30 June 1959 amounted to $63.6 billion, an increase of $1.5 billion over that reported as of 30 June 1958. All of this increase was in Air Force equipment. A slight increase of $100 million in Army equipment is offset by a similar decrease in Navy equipment in use.

2. Office of the Secretary of Defense

Within the Office of the Secretary of Defense, major items of equipment in use as of 30 June 1959 represented a cost of $2.0 million. Office equipment and furniture accounted for 98 percent of this total.

3. Army - Major Military and General Equipment in Use

Army estimates that the value of major items of equipment in possession of Army troops and National Guard units was $6.2 billion as of 30 June 1959. This equipment consisted of combat and support materiel such as artillery, small arms, chemical weapons, tanks, other combat vehicles, tactical and support vehicles, Army aircraft, guided missiles, and other major equipment.

4. Navy - Military and General Equipment in Use

The acquisition cost of Navy's equipment in use was estimated at $30.4 billion as of 30 June 1959. Of this total, $21.5 billion represented the

cost of 2,512 ships, both active and inactive. This was a decrease of $0.3 billion and of 59 ships during the year.

Service craft, such as Utility Land craft, Minesweeping Boats, Open Lighters, Floating Derricks and Harbor Tugs totaled 1,763 as of 30 June 1959. These were valued at approximately $969 million.

Navy program aircraft totaled 11,597 as of 30 June 1959 which included 7,562 operating aircraft, 2,087 logistical support aircraft and 1,948 aircraft in reserve stock. These aircraft were reported as costing $6.1 billion. During the year there was a net decrease of 327 aircraft but a net increase of $0.2 billion in the value of aircraft inventory as a result of replacing old, less expensive models with modern, more expensive ones.

Items of equipment other than production equipment in use at shore installations had an acquisition cost of $1.8 billion.

5. Air Force - Military and General Equipment in Use

The 30 June 1959 figure representing Air Force cost of equipment in use was $27.0 billion. Its 23,015 aircraft together with guided missiles (excluding guided rockets) were valued at $22.7 billion, with all other in use equipment valued at $4.3 billion. The aircraft total included 2,409 airplanes in the custody of the Air National Guard, and 779 in the custody of the Air Force Reserve. The aircraft are valued at average costs for each type of aircraft regardless of the contractor or fiscal year of procurement, without reflecting engineering changes and modification costs subsequent to approval of the basic contract. There was a reduction of 2,149 aircraft in inventory during the fiscal year.

6. Inventory of Production Equipment

The acquisition cost of production equipment under Department of Defense control as of 30 June 1959 was reported as $5.3 billion which is $0.2 billion less than that reported as of 30 June 1958. Production equipment includes metal working machinery and other allied industrial equipment such as metal heat treating furnaces, transformers, hardness testing machines, balancing machines, etc.

Metal working equipment located within the Continental United States and controlled by the Department of Defense had an acquisition cost of $2.7 billion on 30 June 1959 (see Table 41). This was a decrease of $123 million from the amount reported one year earlier. The cost of the various individual categories of metal working equipment is shown in Table 42.

The total number of metal working equipment items in the Department of Defense on 30 June 1959 was 226,861, a decrease during the year of about 20,000 items. About 3,248 of these machine tools are in Navy use in overseas areas. Other items of production equipment controlled by the military departments totaled 266,864, a decrease of about 6,000 items. Of this latter equipment, about 5,447 items were located outside Continental United States.

In addition to the 82,307 machine tools, costing $930 million, the Army reported that it had 170,896 other items of production equipment in use and in reserve which were used in the manufacture of various military end items and components. This production equipment, other than metal working, had an acquisition cost of $1,794 million. All of the Army

3449 Miscellaneous	10,364	7,738	1,194	1,432

production equipment was within Continental United States.

Included in the Navy production equipment totals (apart from any production equipment in the Supply System data) are 78,257 machine tools, costing $816 million, and 66,972 other items of production equipment such as railroad transportation, electrical distribution, materials handling, and construction and excavating equipment. The 66,972 items of production equipment other than metal working had an acquisition cost of $365 million.

In addition to 66,297 machine tools, totaling slightly over one billion dollars, the Air Force had 28,996 other production equipment items such as welding, materials handling, and heat treating equipment. These latter items cost at acquisition $185 million. The Air Force also reports 38,547 items of capital plant equipment with an acquisition cost of $185 million. None of the above are included in the Air Force Supply System data.

Section C - Inventories Held in Industrial Funds

Working capital funds are authorized by Section 405 of Title IV of the National Security Act, as amended. The use of industrial funds permits the financing of industrial or commercial type activities and the development of production costs to be used as a basis for charging the appropriations of customers for the products or services furnished to them by the activity financed by the Fund.

As of 30 June 1959, 58 activities in the Department of Defense were operated under industrial fund charters. The Army had 25; the Navy 30, one of which is a printing activity located in 19 separate plants; the Air Force three (one of which is a printing activity located in nine different plants, another is a laundry and dry cleaning activity

operated at 48 installations, and the third is the newly chartered Military Air Transport Service).

The total inventories, consisting of raw materials, supplies, and work-in-process, held in all industrial funds in the Department of Defense amounted to $371 million on 30 June 1959. This is an increase of $18 million during the year.

The industrial fund inventories for each group of activities within each Department are shown in Table 43.

Section D - Surplus Personal Property in Hands of Property Disposal Officers

As of 30 June 1959 the value of the world-wide surplus and foreign excess personal property inventory of the Department of Defense amounted to $4,027 million of which $3,533 million, or 87.7 percent was domestic (covering Continental United States, Alaska, Hawaii, Puerto Rico and Virgin Islands) and $494 million, or 12.3 percent was foreign excess (Table 44). This total of $4,027 was approximately $175 million less than the total a year earlier.

Of the total amount of surplus and foreign excess property inventories held by property disposal officers the Army reported $1,356 million or 33.7 percent; Navy (including Marine Corps) $1,334 million or 33.1 percent; Air Force $1,337 million or 33.2 percent.

The Army reported that 71.1 percent of their total surplus and foreign excess inventories held by property disposal officers was domestic while 28.9 percent was in foreign countries. The Navy surplus and foreign excess inventories held by property disposal officers were

Table 44.--Surplus and Foreign Excess Property Inventories
Held by Property Disposal Officers
as of 30 June 1959

DEPARTMENT OF DEFENSE

(Thousands of Dollars)

Military Department	Total Inventories	Domestic	Foreign
Department of Defense - Total	$4,027,061	$3,533,359	$493,702
Army	1,356,234	964,729	391,505
Navy (including Marine Corps)	1,333,861	1,317,015	16,846
Air Force	1,336,966	1,251,615	85,351

reported as 98.7 percent domestic and only 1.3 percent foreign. Air Force reports that 93.6 percent of their surplus and foreign excess inventories was domestic and 6.4 percent foreign.

Section E - National Industrial Reserve

1. General

Public Law 883, 80th Congress, the "National Industrial Reserve Act of 1948," provides for establishing "adequate measures whereby an essential nucleus of Government-owned industrial plants and a national reserve of machine tools and industrial manufacturing equipment may be assured for immediate use to supply the needs of the Armed Forces in time of national emergency or in anticipation thereof."

The properties still owned by the Government are managed by the General Services Administration (as successor to the Federal Works Agency) under general policies established by the Secretary of Defense. Since the Department of Defense has a contingent claim and production priority rights in all the National Industrial Reserve plants, including those which GSA has disposed of or leased with a National Security Clause, data on these are included in this section of this report. However, none of the properties in this Reserve has been included in the totals for real property (Part I) or metalworking equipment (Part II, Section B) of this report because they are held by GSA.

2. Plant Reserve

The National Industrial Plant Reserve contained 24 facilities as of 30 June 1959. This was a reduction of 59 facilities, 49 of which were Air Force sponsored plants, since the end of last year. The spon-

soring military department and status of these plants at the end of fiscal year 1959 were:

Sponsor	Total	Sold With Recapture Clause	Under Lease or Contract
Total	24	21	3
Army	13	10	3
Navy	11	11	--
Air Force	--	--	--

In keeping with Department of Defense policy to release as many Reserve Plants as possible to private corporations, 21 of the 24 plants have been sold subject to appropriate restrictions and recapture clauses, and three are being operated under lease or contract agreement.

The net residual acquisition cost (original cost of construction and acquisition of entire plant less portions previously disposed of) of the 21 plants in the Reserve which have been sold was $420 million. The original cost of the three plants still owned by the Government was $34 million.

The status of the 24 plants by category of product is shown in Table 45. Of the three plants still owned by the Government, one produces tank components, one produces gun components, and one produces jewel bearings.

3. Equipment Reserve

The total number of items of production equipment in the National Industrial Equipment Reserve on 30 June 1959 was 4,021 as compared with 4,900 one year ago. The original acquisition cost of the 4,021 items

Table 45.--National Industrial Reserve Plants - by Status and Category of Product as of 30 June 1959

Category of Product	Total	Sold (with Recapture Clause)	Lease or Contract
ALL PLANTS	24	21	3
Aluminum	2	2	--
Chemical	2	2	--
Guns and Ammunition	3	2	1
Iron and Steel	6	6	--
Magnesium	1	1	--
Shipbuilding and Components	5	5	--
Tank and Automotive	2	1	1
Miscellaneous 1/	3	2	1

1/ Includes pipeline facilities.

was $31.1 million.

Of the total of 4,021 items in the Reserve, 3,753 were carried in the central inventory of the Production Equipment Redistribution Group. These are available for lease to overcome production shortages of qualified contractors engaged in defense-supporting production. The remaining 268 equipment items were held in reserve for additional defense support and essential civilian production in the event of mobilization.

PART III - PROGRESS IN RECORDING AND REPORTING PROPERTIES

Section A - Office of the Secretary of Defense Published Directives and Instructions and Current Projects Pertaining to Property Accounting and Reporting.

A digest of the principal regulations, directives, and instructions which provide for the recording or reporting of inventory data which have been issued by the Office of the Secretary of Defense since the enactment of Title IV of the National Security Act and were in effect as of 30 June 1959 is presented in this part of the report. These current directives and instructions, in some instances, supersede or revise earlier directives and instructions on the subject of property accounting and reporting.

1. Military Assistance Program Supply Performance Report (DOD Instruction 2110.27), issued 10 June 1958.

This Instruction prescribes procedures for the preparation of summary quantitative data which will serve as the basis for official reports of the Department of Defense under the Military Assistance Program. The summary data show the value of current month deliveries, approved programs, undelivered balances, and the redistribution of materiel between recipient countries under the MAP Grant Aid Program.

2. Method of Financing, Funding, Accounting and Reporting for Mutual Security Military Sales to Eligible Foreign Governments or International Organizations (DOD Instruction 2110.29), issued 7 April 1959.

The purpose of this Instruction is to prescribe uniform procedures to be followed in financing, funding, accounting and reporting with respect to all sales of military equipment, materials, and services made under the authority of the Mutual Security Act of 1954, as amended.

3. Aircraft Inventory Record Series (DOD Instruction 3232.3), issued 23 March 1956.

This Instruction establishes a uniform Aircraft Inventory Record Series within the Department of Defense in order to ensure that an accurate accountability and inventory record control of components installed in aircraft may be maintained. This requirement is applicable to all aircraft including those subject to inter-department transfer, maintenance cross-servicing, and utilization by National Guard Units, Reserve Training Units and the Mutual Defense Assistance Program.

4. Summary Reports of Dollar Value of Deliveries by Procurement (Claimant) Program (DOD Instruction 4000.3), issued 12 November 1954, with subsequent amendment.

This Instruction establishes reports of the dollar value of supplies and equipment delivered to the military departments and military construction put in place. This Instruction provides a comprehensive measure of progress and trends in military deliveries and construction to be used as a basis for measuring impacts on the national economy and for forecasting materials, manpower, or other requirements of military programs for planning use by Department of Defense and other government agencies.

5. Basic Regulations for the Military Supply System (DOD Directive 4000.8), reissued 5 January 1957.

These basic regulations set forth important objectives in the field of supply which are to be implemented by the military departments and

redefine the relationships between the basic regulations and other Department of Defense directives regulating supply management. They specifically require that "all supply accounting at depot, post, camp, station, base and installation level will be developed to achieve integration and uniformity on a quantitative and monetary basis, except for supplies and property with troop units and afloat, where periodic quantitative inventories only will be required, and that prescribed stock levels shall be uniform among military departments where similar conditions exist."

6. Inventory of Commercial and Industrial Type Manufacturing Facilities (DOD Instruction 4100.19), issued 3 February 1955.

This Instruction provides for the taking of an inventory by the military departments of commercial and industrial type manufacturing facilities, which are owned and operated by the Department of Defense and which produce products for its use.

7. Reports on Single Manager Operations (DOD Instruction 4100.31), issued 22 July 1958.

This Instruction prescribes quarterly statistical reports required by the Office of the Secretary of Defense relative to the operations of the Single Managers in their respective areas of assigned responsibility. These reports provide significant data upon which effective management policies and decisions can be formulated. In the supply area, the following single manager assignments are being reported upon: Airlift Service, Ocean Transportation, Subsistence, Traffic Management within the United States, Clothing-Textiles, Medical Materiel, and Petroleum.

49199 O-60—12

8. Reports on Military Procurement (DOD Instruction 4105.1), reissued 19 August 1958.

This Instruction provides for recurring reports on military procurement actions. All procurement actions of each military department and procurement agency against appropriated funds, contract authorizations and revolving funds which are replenished from appropriated funds are to be reported. These reports furnish information on the participation of small business firms in all military prime contract procurement and in experimental and development contracts, the use of formally advertised and negotiated contracts, the use of fixed price, cost-plus-fixed-fee, and other types of contracts, the distribution of prime contracts by state and labor surplus area, and on other aspects of military procurement.

9. Individual Procurement Action Report (DOD Instruction 4105.44), reissued 20 May 1958, with subsequent amendments.

This Instruction prescribes the use of a uniform format for reporting all procurement actions of $10,000 or more entered into by the military departments. This format is designed to provide essential procurement records and statistics through a single uniform reporting program as a basis for required recurring and special reports. It also provides the military departments with a wide variety of significant data for procurement policy and management control purposes.

10. Monthly Procurement Summary by Purchasing Office (DOD Instruction 4105.51), issued 20 May 1958.

This Instruction provides a form for the use by purchasing offices

of the military departments to report procurement actions of less than $10,000 on a uniform basis.

11. Requirements for Contractors to Price Deliveries of Military Supply Items (DOD Instruction 4110.1), issued 7 April 1959.

The purpose of this Instruction is to provide for the furnishing of unit prices by contractors on materiel inspection and receiving reports for shipments of materiel procured by the military departments. The unit price data furnished on materiel inspection and receiving reports will be used by the military departments in developing departmental standard prices and for financial and supply accounting.

12. Development and Maintenance of the Federal Catalog System Within the DOD (DOD Directive 4130.2), reissued 11 March 1959.

This Directive states the mission and objectives of the Federal Cataloging Program, the scope and policies of the Federal Catalog System, and assigns the responsibilities within the Department of Defense.

13. Inventory Management Policies (DOD Directive 4140.1), issued 12 October 1956 and subsequent amendments, and a series of DOD Instructions: (a) Management of Mobilization Reserve Stocks (Instruction 4140.2), issued 28 July 1954, and subsequent amendment; (b) Management of Materiel in Long Supply (Instruction 4140.3), issued 11 January 1956 and subsequent amendment; (c) Management of Materiel Pipeline, including Levels of Supply (Instruction 4140.4), issued 3 September 1954; (d) Acquisition of Materiel from GSA Stores Depots (Directive 4140.5), issued 15 April 1955, and subsequent amendment; (e) Interservice Supply Support (Directive 4140.6), issued 5 July 1955; (f) Control, Supply and Positioning of

Materiel (Instruction 4140.7), issued 20 July 1955, and subsequent amendment; and (g) Inventory Management Report for Materiel in the Military Supply Systems (Instruction 4140.9), issued 27 April 1956, and subsequent amendments.

Directive 4140.1 establishes the Department of Defense basic policy for the management of materiel inventories and uniform definitions. It calls for a physical inventory of materiel and reconciliation of records at least once a year, and requires that each item of materiel, both for military or industrial use within a military service, shall be under the cognizance of only one inventory control point. These supply and inventory control points are required to maintain records, make reports, channel the transportation of materiel in the most economical manner, review the inventory status in relation to current and future requirements, determine and declare Service-wide excess stocks, and schedule rebuilding of economically repairable stocks. Instruction 4140.2 establishes the policies regarding the retention, storage, care and preservation of mobilization reserve stocks and their stock record accounting, reporting and control. Instruction 4140.3 establishes policies, criteria and procedures requiring the optimum use of materiel in long supply within the Department of Defense. Instruction 4140.4 prescribes definitions to be used for identifying the levels of supply in the materiel pipeline. Directive 4140.5 prescribes the policies and procedures governing Department of Defense acquisition of materiel from General Services Administration. Directive 4140.6 sets policies, criteria and procedures to facilitate optimum interservice use of available materiel within the Department

of Defense. Instruction 4140.7 provides procedures, criteria and guidance governing the control, supply and positioning of materiel within Defense. Instruction 4140.9 prescribes semi-annual and annual reporting as to the status, condition, purposes and activity of the materiel inventories of the military departments.

14. Policies for the Transfer of DOD Supply System Inventories (DOD Directive 4140.13), issued 27 January 1959.

This Directive establishes uniform policies within the Department of Defense for the transfer of materiel in inventories between inventory managers of the military supply systems. These policies provide for the most effective repositioning of materiel for the promotion of military readiness and for the maximum economical utilization of supply system inventories in support of approved plans and programs.

15. Materials Handling Equipment Utilization (DOD Instruction 4145.11), reissued 23 June 1959.

This Instruction (a) establishes uniform criteria for determining quantitative requirements and allowances for the principal items of materials handling equipment, (b) provides a means for determining the quantities of such equipment required by an installation and (c) prescribes reports and data pertinent to the effective application of criteria and analyses of equipment utilization.

16. Policy and Procedures Relating to Nonexcess Personal Property to be Sold or Exchanged for Replacement Purposes (DOD Instruction 4160.1), issued 14 July 1955.

This Instruction establishes Department of Defense policy relating

to the exchange or sale of personal property for replacement purposes where the proceeds of the sale are applied to acquire similar items. It also prescribes policy and procedures affecting the utilization screening of such property before sale or exchange.

17. Policy Governing the Utilization Screening of Excess Personal Property Under Control of DOD (DOD Instruction 4160.9), reissued 25 September 1958.

This Instruction establishes Department-wide policy and procedures for reporting personal property under Department of Defense control, which is excess to the needs of the organization holding such property. It routes notifications of excess personal property so that all elements of the Department of Defense may be informed of its existence and character. Provision is made for notifying all other elements of the Federal Government of excesses remaining after Department of Defense needs are met. Finally, the Instruction provides for disposal of such excesses which are not absorbed by the Federal Government.

18. Reporting Requirements for DOD World-Wide Excess, Foreign Excess and Surplus Materiel (DOD Instruction 4160.17), reissued 13 January 1959.

This Instruction reissues the basic requirements for a Department of Defense reporting system for excess, foreign excess and surplus materiel and the quarterly submission of specific information relating to the utilization and disposal of excess and surplus personal property.

19. DOD Facility Classes and Construction Categories (DOD Instruction 4165.3), issued 11 March 1955, and subsequent amendments.

This Instruction provides a standard numerical code for the identification and classification of facility classes and construction categories

to permit uniform identification and classification of real property in planning, programming, budgeting, accounting and reporting; exclusive of the Civil Works activities of the Army Corps of Engineers, or emergency construction in direct support of combat operations for any of the military departments.

20. Real Property: Acquisition, Management and Disposal (DOD Directive 4165.6), issued 15 September 1955; Program for Management of Real Property Maintenance Activities (DOD Instruction 4165.9), issued 23 June 1955.

Directive 4165.6 states the Department of Defense policy relative to the acquisition, management and disposal of real property and delegates the authority to accomplish these actions within each of the military departments to the respective Secretary. Instruction 4165.9 outlines a program for uniformly effective management of real property maintenance activities.

21. Inventory of Military Real Property (DOD Instruction 4165.14), reissued 20 February 1958.

This Instruction provides a unform procedure to be followed by the military departments for the establishment and maintenance of a world-wide inventory of real property (land and improvements) and for the preparation of an abridged inventory in summary form. Specific instructions are contained in this Instruction as to the categories, physical units of measure, the data, maps, and descriptive information which are to be kept on the records in the military departments and those that are to be summarized and reported to the Office of the Secretary of Defense. The military departments are required to keep their records current at all times and to submit summary reports annually.

22. Utilization and Retention of Real Property (DOD Directive 4165.20), reissued 29 August 1958, and (DOD Instruction 4165.35), issued 29 August 1958, with subsequent amendments.

Directive 4165.20 establishes Department of Defense policy governing the retention of real property by the military departments, establishes criteria by which such property will be retained or reported excess and provides for a review of real property holdings within the military departments. Instruction 4165.35 provides uniform reporting procedures for making studies of real property holdings and for submission of reports on this program.

23. Preparation of Materiel Planning Study, DD Form 764, (DOD Directive 4200.1), reissued 11 February 1959.

This Directive provides for a uniform presentation of demand and supply data from which the Office of the Secretary of Defense and the military departments can discharge their responsibilities in the field of requirements and supply management. World-wide assets on hand and their general location are shown. The Directive is record-keeping in nature and studies of major items currently being procured are requested by separate memoranda as required - usually semiannually. A list of items was developed for which a materiel planning study was requested from the military departments. This original list of items has been revised periodically for the purpose of adding or deleting items as they increase or decrease in importance.

24. Production/Delivery Status and Progress Reporting Between Military Departments (DOD Instruction 4200.4), issued 11 October 1955, and subsequent amendment, and Materiel Program Control - Principal Items (DOD Instruction 4200.6), issued 14 December 1955, and subsequent amendment.

Instruction 4200.4 establishes a requirement for, and a method to accomplish, the exchange of information between two or more of the military departments relative to Production/Delivery Status and Progress Reporting in connection with basic items procured or produced by one military department for another as the result of a single procurement assignment agreement. Instruction 4200.6 establishes the criteria for determining end items of major importance and provides for the accumulation of data, the regular publication of studies and the interchange of information between the military departments relative to those major items.

25. Recording and Utilization of Idle Production Equipment (DOD Directive 4215.9), issued 7 August 1957, and subsequent amendment.

This Directive prescribes the policies and procedures for reporting and redistributing idle machine tools and certain other related production equipment owned or controlled by the Department of Defense.

26. Inventory of DOD Owned Machine Tools and Other Production Equipment (DOD Directive 4215.12), reissued 25 April 1957.

This Directive provides for the preparation and maintenance of adequate inventory records of Department of Defense owned machine tools and other production equipment in the Departmental Industrial Equipment Reserves. Reports on inventories are obtained by memorandum request as required,usually on an annual basis.

27. Reporting of Certain Fiscal Data with Regard to Machine Tools (DOD Instruction 4215.16), issued 29 July 1958.

This Instruction establishes an annual report designed to reflect the number and dollar value of machine tools having an acquisition cost in excess of $500 approved for procurement during the past fiscal year. It also includes the number and dollar value expected to be procured during the current fiscal year.

28. Petroleum Products Status and Program Report (DOD Instruction 4220.1), issued 20 January 1956, and subsequent amendments.

This Instruction provides for quarterly reports from the military departments showing the procurement program and deliveries, consumption, sales, issues, inventories and analyses of the reported data for selected petroleum products along with dollar values for the procurement program and deliveries.

29. Military Public Works Basic Record Keeping Requirements (DOD Instruction 4270.3), reissued 13 October 1955.

This Instruction provides for the maintaining of basic records, relative to military public works construction activities, at the headquarters of each of the military departments, from which summary data may be extracted as required.

30. DOD Motor Vehicle Uniform Reporting System (DOD Instruction 4500.7), reissued 15 October 1958.

This Instruction establishes standard terminology, definitions and reporting of motor vehicle inventories. The system provides data on utilization, operating and maintenance costs.

31. Responsibility for Application of Automatic Data Processing Systems to Business Procedures (DOD Directive 5105.11), issued 2 January 1957.

This Directive defines the responsibility of the military departments and the Office of the Secretary of Defense in the application of automatic data processing systems (ADPS) to business procedures; such as inventory accounting, etc.

32. Policies for Implementation of Single Manager Assignments (DOD Directive 5160.12), issued 31 January 1956 and subsequent amendments, and a series of DOD Directives: (a) Single Manager Assignment for Airlift Service (DOD Directive 5160.2), reissued 7 December 1956, and subsequent amendments; (b) Single Manager Service Assignment for Ocean Transportation (DOD Directive 5160.10), reissued 28 May 1956, and subsequent amendments; (c) Single Manager Assignment for Subsistence (DOD Directive 5160.11), reissued 3 May 1956, and subsequent amendments; (d) Single Manager Service Assignment for Traffic Management Within the United States (DOD Directive 5160.14), issued 1 May 1956, and subsequent amendments; (e) Single Manager Assignment for Clothing-Textiles (DOD Directive 5160.15), issued 4 May 1956, and subsequent amendments; (f) Single Manager Assignment for Medical Materiel (DOD Directive 5160.16), issued 4 May 1956, and subsequent amendment; (g) Single Manager Assignment for Petroleum (DOD Directive 5160.18), issued 24 July 1956, and subsequent amendments.

Directive 5160.12 establishes the basic pattern of organization and procedures for Single Manager assignments for common use items or common service activities, identifying the primary objective of the

Single Manager assignments as being the elimination of duplication and overlapping of effort between and among the military departments and the improvement of effectiveness and economy in supply and service operations throughout the Department of Defense. Directive 5160.2 creates a Single Manager Assignment for Airlift Service, designating the Secretary of the Air Force as the Single Manager. Directive 5160.10 creates a Single Manager Assignment for Ocean Transportation designating the Secretary of the Navy as the Single Manager. Directive 5160.11 creates a Single Manager for Subsistence designating the Secretary of the Army as the Single Manager. Directive 5160.14 creates a Single Manager Assignment for Traffic Management within the United States, designating the Secretary of the Army as the Single Manager. Directive 5160.15 creates a Single Manager Assignment for Clothing-Textiles, designating the Secretary of the Army as the Single Manager. Directive 5160.16 creates a Single Manager Assignment for Medical Materiel, designating the Secretary of the Navy as the Single Manager. Directive 5160.18 creates a Single Manager Assignment for Petroleum, designating the Secretary of the Navy as the Single Manager.

33. Regulations Governing the Use of Project Orders (DOD Directive 7220.1), reissued 27 September 1958.

This Directive prescribes the regulations governing the use of project orders and the basis upon which the performing establishment will be reimbursed. A project order is a specific, definite and certain order issued for the manufacture of materials, supplies and

equipment, or for other work or services, which, when placed with and accepted by a Government-owned and operated establishment, serves to obligate appropriations in the same manner as orders or contracts placed with commercial enterprises.

34. Accounting and Reporting on Expenses and Disposition of Proceeds from Sale of Scrap, Salvage, Surplus or Foreign Excess Personal Property (DOD Instruction 7310.1), reissued 5 January 1959.

This Instruction sets forth the policies with respect to accounting and reporting on disposition of proceeds from sale of scrap, salvage, or surplus materials, including foreign excess personal property of the Department of Defense, except (a) proceeds from sale of such material held by working capital funds of the military departments (these are handled in accordance with Regulations Governing Stock Fund and Industrial Fund Operations) and (b) proceeds from sale of such material held for the Material Assistance Program.

35. Regulations Governing Industrial Fund Operations (DOD Directive 7410.4), reissued 17 July 1958, and subsequent amendments.

This Directive provides for the establishment of three Industrial Funds - one in each military department. It also establishes the policy for the initial transfer of funds, inventories, and properties to the Industrial Funds, the handling of project and other work orders and reimbursements for such work, provision for accounting and cost accounting systems, authorization to incur obligations and expend funds, budgetary control, reporting on operations, and auditing.

36. Regulations Governing Stock Fund Operations (DOD Directive 7420.1), reissued 19 December 1956, and subsequent amendments: (a) Authorized Donations of Surplus Materiel from Working-Capital Funds to Health, Education and Welfare; (Instruction 7420.3), issued 9 June 1955, and subsequent amendments; (b) Constructive Methods of Billing for Stock Fund Sales (Instruction 7420.4), reissued 2 July 1957; (c) Principles to be Observed Determining Materiel to be Included in Stock Funds (Instruction 7420.5), issued 26 November 1956.

Directive 7420.1 provides for establishement of a Stock Fund in each of the four services setting up procedures for the issuance of charters, initial transfer of funds, inventories, and other assets, pricing policy, management policy, sales of stocks, accounting, authority to obligate and expend funds, budgetary control, reporting, and auditing. Instruction 7420.3 provides for establishment of accounts in each industrial fund and departmental stock fund and division thereof to reflect the authorized donations of surplus materiel for health, education and welfare purposes. Instruction 7420.4 provides for the establishment of sales and accounts receivable at the time delivery of goods to a common carrier is made. Instruction 7420.5 clarifies the criteria for inclusion and exclusion of materiel for stock fund financing.

37. Financial Reports for Department of Defense Stock Funds (DOD Instruction 7420.6), issued 10 June 1957.

This Instruction provides the financial reports and budget forms to meet requirements of the Office of the Secretary of Defense in overall

financial review, for use in the preparation of reports to the Congress and other Government agencies, and in financial control actions under the budget process.

38. Reimbursement by Single Manager Stock Fund Divisions for Retail Inventory Losses (DOD Instruction 7420.7), issued 7 January 1958.

This Instruction prescribes uniform procedures for reimbursement by Single Manager stock fund divisions to the retail stock fund divisions of the military services for net inventory losses of the corresponding retail category or division of assigned material estimated to be recovered in surcharges established by the Single Manager.

39. Report on Real and Personal Property and Financial Assets (DOD Instruction 7500.1), issued 8 July 1958.

This Instruction prescribes uniform reporting formats and criteria to the military departments for the recurring annual submission of narrative, accounting and statistical material required by the Office of the Assistant Secretary of Defense (Comptroller) for the preparation of a consolidated Department of Defense report to the Congress and the President on property records maintained under Section 410 of the National Security Act. It also prescribes the instructions and reporting format for the financial assets of each military department exclusive of real and personal property, required annually by the Chairman of the Committee on Government Operations, House of Representatives.

40. Uniform Pricing Policy for Materials, Supplies and Equipment Financed by Military Appropriated Funds (DOD Directive 7510.1), issued 31 December 1956 and subsequent amendment.

This Directive provides the basic policies and criteria pertaining to pricing materials, supplies and equipment in the supply distribution system other than those inventories financed under working capital funds.

41. Use of Source Documents and Source Records in Quantitative and Financial Inventory Accounting (DOD Instruction 7510.2), issued 2 July 1957.

This Instruction defines the type of basic source documents and source records to be used in the military departments to ensure that the inventory accounting and reporting systems provide for the accumulation of both quantitative and financial data from original transaction documents and stock records.

Section B - Department of the Army

Reduction in Size of Supply Inventory

The Army's $18.6 billion supply inventory, as of 30 June 1959, still contained many items obtained during World War II and the Korean War which are now excess to its needs. The Army is eliminating these items from the supply system as rapidly as possible in a systematic manner. "Operation ELIMEX" was implemented with the objective of determining total Army and Military Assistance Program requirements, isolating and declaring excess all stocks not applicable to those programs, and expediting the physical disposal of all excess stocks revealed in the process, all on a greatly accelerated basis from previous programs. As a result of the continued emphasis placed on this operation, over $2.7 billion of obsolete and worn out materiel was eliminated from the Army supply system in fiscal year 1959, making a total of over $6 billion eliminated since this program was implemented.

Reduction in Number of Line Items

Approximately 146,000 line items were removed in fiscal year 1958 and 369,600 line items were removed from the supply system during fiscal year 1959.

There were approximately 861,622 cataloged items as of 30 June 1959. These figures include standard commercial-type items which are cataloged but not stocked. Currently, the Army has 691,000 items stocked in the supply system as compared with 828,853 items at the beginning of fiscal year 1959.

The Accelerated Item Reduction Program is a project sponsored by the Armed Forces Supply Support Center. This program was initiated in

fiscal year 1959 to effect the maximum reduction of items in the military supply system in the shortest possible time; to increase the common use of items among the military services; and to provide for centralized recording and reporting of items added to the system, items eliminated, and the status of the items retained in the system.

The Army Accelerated Item Reduction Program developed a short cut standardization program for 24 Federal Supply Classes, containing housekeeping and administrative type items. Six of the 24 Federal Supply Classes were assigned to the Department of the Navy. The remaining 18 Federal Supply Classes were assigned to the Department of the Army, and in turn to the Quartermaster General. Accomplishments made were as follows:

1. Approximately 5,100 items were reviewed and the determination made whether these items were standard, non-standard, or could be eliminated. Standardization actions required, in many cases, just "common sense" decisions by the cataloging and inventory management personnel.

2. Five of the 18 Federal Supply Classes reviewed were determined to be impracticable for standardization. Of the remaining 13 Classes reviewed, 20% of the items were determined to be standard and 80% non-standard. The items determined to be non-standard will be eliminated from the supply system as stocks are exhausted and only those determined to be standard will be authorized for new procurement.

3. The program was completed on 30 April 1959, two months ahead of schedule.

Automatic Data Processing

Gradually, automatic data processing with its accompanying system of rapid communications, is being installed throughout the Army's logistic system. As of 30 June 1959, automatic data processing equipment had been installed at each National Inventory Control Point in the following technical services: Signal, Quartermaster, Engineers and Transportation; and was also installed at three of the eight Ordnance National Inventory Control Points. Automatic data processing equipment has contributed to improving the accuracy of records and reports for item accounting and monetary accounting at the National Inventory Control Points and at the thirteen depots where this equipment is used. The principal benefit from this equipment is the rapid computation and transmission of timely data concerning requirements, stock status, and the processing of requisitions which results in more rapid supply to troops units and contributes to the reduction of the number of line items in overseas depots.

ZI Installation Division Stock Fund

On 2 April 1959, a charter for the operation of the ZI Installations Division, Army Stock Fund, without apportionment of the obligational authority, was approved. This division became operative on 1 July 1959 at nine CONUS stations in the Third U. S. Army area on a test basis. An evaluation of this test will be made by Army staff agencies and a determination will be made as to further installation of this type of stock fund organization.

The system is designed for the purpose of testing basic policy and operational concepts, within prescribed channels of commands consistent with the organizational structure of the Department of the Army, as follows:

1. To assure financing and maintenance of approved inventory levels of operating stocks, authorized reserves, and related on order and shipping time quantities necessary to satisfy troop issue demands and mission materiel requirements at the installation level.

2. To provide a system of sound financial and supply management decentralized to the installation level.

3. To provide a system sufficiently flexible to insure effective and timely responsiveness to supply requirements.

4. To provide a system based on simplification of accounting and reporting operations.

Army anticipates that this type organization will eliminate many of the defects and accounting and reporting problems associated with the extension of the stock funds of the several technical service divisions to station levels. Generally, the organization places the ownership and responsibility for station stocks with the Army Commander, who has the authority to make inter-station transfers and turn-ins without loss of funds and make only one divisional report in lieu of nine separate reports to the technical service divisions and subdivisions. The Army Commander will procure stock from any of the technical service divisions as needed. Theoretically, this organization

will provide more flexibility in the operation of a station level stock fund.

Modernization Program

The Army Obsolescence and Modernization Program instructions, revised as of 3 November 1958, state the policy and assign the responsibility for the type classification of items and assembly of material used in or supplied by the Department of the Army. The new instructions have eliminated modernization coding as a management tool. Inappropriate classifications have been deleted and the total number of possible classifications has been reduced. A definitive break now exists between operationally acceptable items and those that are unacceptable. Preferred items have been clearly identified and items held in the Military Assistance Program accounts have been set apart. The total impact of this revision has been to modernize the applicable inventory and to simplify the type classification of materiel.

Real Property

In accordance with revised Army regulations a physical inventory is made of all real property at least once every three years. Where the real property is such as to make a complete inventory at one time a difficult job, the inventory is taken on a cycle basis so arranged that a complete inventory is accomplished every three years. Visual inspections are made to insure that items are correctly recorded and any additions to or deletions from the original structures are properly recorded. Detailed measurements other than those necessary to correct obvious errors are

not taken during inventories. At the close of the inventory a statement that the physical check of real property is made and property records adjusted accordingly is prepared. This statement is then filed with the real property records.

The procedure for recording the acquisition and disposal of such property is set forth in these revised Army regulations. Posting is made to property records within 48 hours of the complete transfer, disposition, or adjustment action.

Section C - Department of the Navy

Reduction in Size of Supply Inventory

During fiscal year 1959 the Navy continued to give priority attention to the disposal of excess and surplus materiel. A total of $2.6 billion was generated during the year, with $3.3 billion being disposed of. The inventory of excess and surplus material at the close of the fiscal year was valued at $1.3 billion. The volume of property disposed of during the fiscal year establishes a new high for the Navy and it is anticipated that the current rate of disposal will remain at approximately the same level for fiscal year 1960.

Inventory control points were directed during the fiscal year to determine the circumstances in which supply items under their direct control would not be accepted for retention in the supply system when such items were returned by using units. As a result, all supply items returned to the supply system will be identified by codes indicating the type of repair action required and, where appropriate, an economical repair limit will be established. The full implementation of this policy

will reduce the surplus stock build-up and administrative costs on roll-back materiel.

Reduction in Number of Line Items

During fiscal year 1959 the Navy continued its program of refining operations under the Defense cataloging program. The number of items of supply which have been identified and cataloged remained at approximately 1,400,000 for the fiscal year. However, all inventory supply managers are currently using only the new cataloging data. The Accelerated Item Reduction Program (AIR) continued to receive careful attention and the range of items was reduced in accordance with schedules established by the Armed Forces Supply Support Center. During fiscal year 1959 approximately 101,500 Navy Federal Stock Numbers were eliminated in reviews made under this program. During the same period, approximately the same number of new items were added.

Interservice Supply Support

During fiscal year 1959 the Navy made significant progress in the internal management of its supply system and interservice supply relations. A plan for the more effective utilization of interservice supply resources was developed and implemented. A program for reviewing the detail operations of several inventory managers was initiated with the result that supply management and Navy-wide supply policy was improved and simplified.

Management Responsibilities

The elimination of duplicate management of materiel inventories received particular emphasis during the fiscal year. Some items of aeronautical electronic equipment had been under the management control of both the Bureau of Aeronautics and the Bureau of Ships. The requirements

for this equipment were in the basic programs of each of these bureaus. After careful study it was determined that the Bureau of Aeronautics had the primary responsibility for this equipment and the management control was assigned to that bureau. The Bureau of Ships will obtain its requirements for this equipment from the Bureau of Aeronautics.

A clearer delineation of bureau inventory management responsibilities was initiated during the fiscal year. The various bureaus and offices developed cognizance standards and uniform materiel definitions. These were used to screen individual stock items for primary application within the operating programs and the necessary management realignments were made between the bureaus and offices where required.

In order to improve aviation supply support for the Navy aviation program, the 43 specific recommendations made by a special review board of qualified officers and civilians during the fiscal year was reduced to a 17 point program to meet the most pressing supply problems. Some of the most important problems solved under this program were: (1) clarification of management responsibilities of the Aviation Supply Office, (2) development and refinement of a comprehensive inventory control program for repairable equipment, (3) increased management attention to high cost items and decreased attention to the low cost items managed by wholesale methods, (4) improved reporting of contractor performance, (5) improved stock status reporting.

Plant Property

The Navy initiated a comprehensive program to improve inventory control and management of plant property during fiscal year 1959. A

significant reduction in costs should result from the adoption of contractor accounting techniques, inventory schedules and management methods. A simplified procedure was established for reporting changes to the financial and inventory records. These changes will expedite the periodic updating and reporting of the physical condition of industrial plant equipment and contribute to the greater utilization of existing production equipment. The standardization of interservice property administration procedures and the establishment of a single service administration of government property, where more than one military service is represented in a contractor's plant, will reduce contract administration costs.

During 1959 the Navy began using magnetic tape in its accounting process for real property. This change has resulted in a more refined report, produced in less time than in prior fiscal years.

Section D - Department of the Air Force

Reduction in Size of Inventory

During fiscal year 1959, Air Force supply system inventories decreased $400 million. Property originally valued at $2.5 billion was disposed of during the year, a 38 percent increase over the $1.8 billion disposed of in the previous fiscal year. Property originally costing $3.2 billion was declared excess or surplus to Air Force needs, 30 percent more than in fiscal year 1958. The large increases in both dispositions and generations are the result of a large number of propeller-driven aircraft becoming excess to requirements and to the increased effectiveness of the surplus property program.

During fiscal year 1959 the Air Force effected many improvements

in the field of inventory management. During this period only 20 percent of the flyaway cost of aircraft went for initial spares as compared to 23.5 percent for the previous year. The Air Force achieved this reduction in inventory investment by buying fewer initial spares and deferring the purchase of a significant portion of the number needed until a later date. While this deferral will increase the number and cost of replenishment spares, it will be possible during the intervening period to determine requirements for those items more accurately in the light of actual experience in their use and new and revised operational programs. Decreases in the cost of initial spares should, therefore, more than offset the increased cost of replenishment spares.

Another measure taken to reduce inventory investment was the adoption of a new procedure for computing requirements for high-value and long-lived spares. Previously, computations were based on the number of equipment failures per 1,000 flying hours, and no distinction was made between a six-month-old aircraft and a three-year-old one. Now the age of individual components is taken into consideration.

The Economic Order and Stockage Program was refined during this period. Mathematical formulas, based on scientific computational techniques, were developed and approved. Flow charting and machine programming is now underway, preliminary to the actual application of these formulas to the requirements computation. The Air Force has recognized the dollar impact of fast moving, low cost items and has implemented within this program a refined management technique applicable to these high volume items. Special management attention is given to these

items in an effort to achieve greater effectiveness in supply support and economy. This includes a re-evaluation of data input and a detailed review of factors which might influence requirements, such as descending programs, possibility of obsolescence, and reduction in future utilization or population of the end items supported.

Interservice Supply Support

Air Force Regulation 67-22, Policy and Procedures for the Transfer of Supply System Inventories, was prepared and published during fiscal year 1959. This regulation implements DOD Directive 4140.13, dated 27 January 1959, on the same subject. It provides for a revision of retention levels for supply system inventories and the transfer of materiel above the revised levels for use by all services without charge. Materiel received as a result of transfers from other services will be used in lieu of new procurement, and instances of concurrent buying and selling by the services should be sharply reduced or eliminated.

Automatic Data Processing

Study of the use of modern electronic data processing equipment in base supply inventory control has indicated that the responsiveness in the requirements of a modern supply system in support of combat forces can be adequately met, and the dollar value of base inventories reduced. As of the end of fiscal year 1959, medium scale electronic data processing equipment has been installed at four Strategic Air Command bases and two Air Defense Command bases. The system is mission oriented and has demonstrated through service tests the capability to provide immediate and positive response to the demands of the customer. Transactions are pro-

cesssed as they occur and records are current as of the last transaction. The system provides immediate availability of all interchangeable assets; immediate requisitioning of items not in stock; automatic stock replenishment requisitioning; continuous adjustment of stock levels; automatic notification of excesses; and weapons system accounting.

Federal Supply Classification and Cataloging

As of 31 December 1958, the Air Force had converted all of its items of supply to Federal Item Identifications, with minor exceptions which were due to delays in publication and distribution of supply catalog change notices. Those conversions have now been accomplished. Reports have been obtained through command channels from all Air Force bases, to guarantee that the objectives and schedules of the Federal Cataloging Program were observed. All Air Force logistics records, reports, and transactions today identify materiel in terms of Federal Stock Numbers, and assignment of logistics responsibility is determined on the basis of Federal Supply Classes.

The Rapid Wire Transmission System, employing coded description patterns of punched tapes, was developed and implemented by the Armed Forces Supply Support Center and the military departments to provide rapid, accurate transmittal of catalog data over telephone toll lines, replacing slower and less satisfactory methods of communication. After several months of planning, procurement of equipment, and installation of terminal facilities, the initial operation within the Air Force began at Dayton Air Force Depot on 16 March 1959. By 15 June 1959,

six other Air Materiel Areas and Air Force Depots had also activated their portions of the system, which could ultimately link all cataloging activities in all the military departments with one another and with the Armed Forces Supply Support Center.

PART V

REALTY INVENTORY OF (1) EXECUTIVE AGENCIES, OFFICES, AND ESTABLISHMENTS OF THE UNITED STATES GOVERNMENT; (2) DEPARTMENT OF DEFENSE; AND (3) ARCHITECT OF THE CAPITOL, LOCATED IN CONTINENTAL UNITED STATES, AS OF JUNE 30, 1959

Realty Inventory—Executive Agencies, Offices, and Establishments of the U.S. Government, Including the Department of Defense, in Continental United States, as of June 30, 1959

[Cost in thousands of dollars]

Civilian executive agencies, offices, and establishments	14, 337, 523
Department of Defense: [1]	
Civil functions, Corps of Engineers	4, 239, 535
Department of the Army	8, 096, 000
Department of the Navy (including Marine Corps)	7, 167, 000
Department of the Air Force	7, 307, 000
Total	41, 147, 058

[1] Includes original cost of all property owned and/or controlled by the Department of Defense. These figures include leasehold improvements, easements, and permits as noted on DOD-GSA cost reconciliation table.

Note.—Important: Data for Department of Defense covering real property located in Alaska not included in the above figures. Alaska realty figures appear in the "Territories and Possessions of the United States and in Foreign Countries" portion of this inventory report.

GENERAL SERVICES ADMINISTRATION,
Washington, D.C., December 11, 1959.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to your letter of February 24, 1959, enclosed are three summary tabulations of real property owned by the Federal Government throughout the world, together with a statement on coverage.

The other summary table requested, "Federal Real Property in the United States, by State," is now being prepared and will be submitted as soon as completed.

For the first time, the inventory shows Alaska as part of the United States. The Department of Defense, however, furnished only overall summary figures on total acres and total costs for its military functions located in U.S. Territories and possessions and in Alaska. Consequently, data for military functions in Alaska are included as part of Defense's summary data for U.S. Territories and possessions.

The Federal Government owned real property throughout the world with an acquisition cost of $49.2 billion as of June 30, 1959. The Department of Defense accounts for $33.9 billion, or 69 percent, while civil agencies account for $15.3 billion, or 31 percent of the total.

Sincerely yours,

FRANKLIN FLOETE, *Administrator.*

INVENTORY OF REAL PROPERTY OWNED BY THE UNITED STATES THROUGHOUT THE WORLD AS OF JUNE 30, 1959

AUTHORITY

An inventory of real property owned by the United States throughout the world, as of June 30, 1959, is being compiled by the General Services Administration pursuant to the request of the chairman of the House Committee on Government Operations in a letter dated February 24, 1959.

SCOPE

This inventory includes all real properties owned by the U.S. Government throughout the world. It is based on detailed inventory reports submitted by the participating agencies as prescribed by General Services Administration Circular No. 80, revised, dated June 6, 1958.

Inventory data are presented in three major geographical location groupings: (1) United States, (2) U.S. Territories and possessions, and (3) foreign countries. For the first time, the inventory shows Alaska as part of the United States. The Department of Defense, however, furnished only overall summary figures on total acres and total costs for its military functions located in U.S. Territories and possessions and in Alaska. Consequently, data for military functions in Alaska are included as part of Defense's summary data for U.S. Territories and possessions.

The inventory does not include any lands owned by the sovereign governments of the various U.S. Territories and possessions. Neither does this inventory cover any lands which are administered by the United States under trusteeship by authority of the United Nations.

Real property declared to be excess to the needs of the holding agency or surplus to the needs of the U.S. Government are included in the inventory. Data with respect to buildings, structures, and other facilities in process of construction are included only if they were available for use as of June 30, 1959.

The inventory excludes residential and farm properties acquired by the Federal Government through foreclosure incident to a lending operation or other Federal aid project. It also excludes property owned by the District of Columbia government.

The inventory excludes machinery, processing equipment, demountable and movable structures, and furniture and special use items which are not considered part of realty.

Properties managed by the Architect of the Capitol and those held in trust by the U.S. Government are not included in the summary tabulations.

Cost figures shown are the actual acquisition costs, when available, and estimated costs (as of date of acquisition) when actual costs are not available. Costs include all capital improvements and such items as plumbing, elevators, heating and lighting fixtures, and air-conditioning systems, which are normally required for the functional use of a building. In addition, costs include such items as safes and vaults which are built into the structure or are permanently affixed thereto.

No costs have been included in this inventory for (1) unreserved public domain; (2) public domain reserved for national parks, national forests, military installations, and other purposes; and (3) historical sites, when such sites have been acquired by methods other than by purchase. However, the acreage for such lands is included in the inventory.

GENERAL SERVICES ADMINISTRATION,
Washington, D.C., June 6, 1958.

GENERAL SERVICES ADMINISTRATION CIRCULAR NO. 80, REVISION NO. 3

To: Heads of Federal Agencies.
Subject: Annual Reports on Federal Real Property Holdings.

1. General

This circular prescribes annual reports necessary for the maintenance and publication of an inventory of Federal real property holdings covering real property owned by and leased to the United States Government as of June 30 each year. It also prescribes forms with detailed instructions for the preparation and submission of these inventory reports to the General Services Administration.

2. Authority

The inventory reports are prescribed pursuant to the authority contained in the Federal Property and Administrative Services Act of 1949 (63 Stat. 377), as amended.

The inventory of Federal real property was initiated and is being continued at the request of the Senate Committee on Appropriations.

The House Committee on Government Operations has also requested data on all federally owned real property for inclusion in its real and personal property inventory reports.

3. Purpose

The real property inventory provides a centralized source of information covering all Federal real property throughout the world. Some of the principal purposes to be served by the real property inventory are as follows:

(*a*) To achieve the most effective and economical governmentwide utilization of available property.

(*b*) To facilitate disposal of surplus property.

(*c*) To provide a basis for the intelligent evaluation and appraisal of budgetary requirements.

(*d*) To establish a ready reference for answering inquiries from the Congress; the press; trade associations; educational institutions; Federal, State and local government agencies; and the general public.

4. Reporting agency

Reports on federally owned real property shall be submitted by the agency responsible for the maintenance of real property records as prescribed in GAO Accounting Systems Memorandum No. 32, i. e., the agency which has control of and the authority to assign and reassign the use of property or any portion thereof.

The agency which currently administers the lease and makes rental payments to the lessor will be responsible for reporting leased property, regardless of which agency executed the original lease or is currently using the property.

5. Coverage

The inventories prescribed by this circular shall cover land, buildings, and other structures and facilities throughout the world which are owned by or leased to the United States Government, or wholly owned Federal Government corporations.

(*a*) *Owned property.*—The annual reports of real property owned by the United States Government shall include (1) unreserved public domain; (2) public domain reserved for national forests, national parks, military installations or other purposes; (3) property in which the United States Government has a life interest; and (4) property acquired by purchase, construction, donation, and other methods of acquisition. They shall also include all buildings or structures owned by the Federal Government, whether or not located on Government-owned land. Separate annual reports shall also be submitted for real properties held in trust by the Federal Government.

For purposes of this inventory, buildings being acquired under the "public buildings purchase contract program" or "lease-purchase agreements," Public Law 519, 83d Congress, as amended, shall be treated as "owned" property.

Items to be excluded from the annual reports are (1) properties acquired through foreclosure, confiscation, or seizure to be liquidated in settlement of a claim or debt to the Federal Government; (2) rights-of-way and easements granted to the United States Government; (3) machinery and processing equipment which are not part of the realty; (4) sovereign-owned land of the governments of the various United States Territories and possessions; and (5) lands administered by the United States under trusteeship by authority of the United Nations.

(*b*) *Leased property.*—The annual report of real property leased to the United States Government shall include all property leased from private individuals, organizations, and municipal, county, State, and foreign governments, as evidenced by a written agreement involving a monetary consideration and a landlord-tenant relationship. It shall also include right of use and occupancy obtained under eminent domain proceedings or equivalent procedures.

Items to be excluded from the annual reports are (1) real property occupied under permit or other arrangements with other Federal Government agencies or wholly owned Federal Government corporations; (2) leasehold improvements (but Government-owned buildings or structures located on leased land shall be reported as federally owned); (3) rights-of-way and easements; and (4) real property leased rent free or for nominal rent, unless the property is significant.

Examples of properties to be excluded are (1) building space and/or land made available to the Federal Government, rent free, or for nominal payment, such as rooms in courthouses, county buildings, universities, and (2) land upon which the Government has been granted an easement, right-of-way, or permit to place power transmission lines, gaging stations, fire lookout towers, and revetments. Determination as to whether the item is significent and is rent free or for nominal rental is the responsibility of the reporting agency. 35 Comp. Gen. 713 is suggested as a guide to help resolve questions pertaining to the definition of "nominal payment."

6. Reports to be submitted

(*a*) *Inventory of real property owned by the United States Government.*—Each agency shall prepare, in accordance with the instructions in attachment 1a and submit to the General Services Administration, a separate report on GSA Form 1166: Annual Report of Real Property Owned by United States Government (attachment 1), for (1) each newly acquired installation; (2) each installation with increases or decreases of $1,000 or more affecting any line item or the total for the installation, or any change in acreage, irrespective of costs, which have occurred since the submission of the previous report; (3) each installation which has been declared excess, in whole or in part; and (4) each installation for which a revision of an entry on the previous report is required.

In the case of changes under "(2)" and "(4)" above, an adjusted report shall be submitted covering the entire installation. This adjusted report shall be a complete restatement giving effect to all installation changes such as acquisitions, dispositions, construction, and corrections of errors or omissions in the previous report.

Each agency shall also prepare and submit to the General Services Administration, for each bureau or other major organizational unit, a report on GSA Form 1209: Summary of Number of Installations Owned by United States Government (attachment 2), regardless of whether or not changes have occurred since the previous report. Separate reports on GSA Form 1209 shall be submitted for properties (1) in the United States, and (2) outside the United States.

The annual inventory reports (GSA Forms 1166 and 1209) shall be submitted as of June 30 each year. An original and one copy of these reports shall be submitted to the General Services Administration, Office of the Comptroller, Washington 25, D. C., not later than September 1 of each year.

Whenever possible, data reported shall be based on detailed real property records and related documents in the reporting agency's files. When such records or documents are not available, estimated data, so identified, may be used. However, as soon as practicable, detailed real property records (and related documents) shall be established and maintained on a current basis by the reporting agencies.

(*b*) *Inventory of real property leased to the United States Government.*—Each agency shall prepare and submit to the General Services Administration a report of its leased real property holdings as of June 30 each year on GSA Form 1166A: Annual Report of Real Property Leased to United States Government (attachment 3), in accordance with the instructions in attachment 3a.

Each agency shall also prepare and submit to the General Services Administration, for each bureau or other major organizational unit, a report on GSA Form 1209A: Comparative Summary of Properties Leased to United States Government (attachment 4). Separate reports on GSA Form 1209A shall be submitted for properties (1) in the United States, and (2) outside the United States. Instructions for the preparation of this form are set forth in attachment 4a.

An original and one copy of each report shall be submitted annually to the General Services Administration, Office of the Comptroller, Washington 25, D.C., not later than October 1 of each year.

(*c*) *Optional reporting method.*—Agencies which have electrical accounting machine equipment may make arrangements with the General Services Administration, Office of the Comptroller, to furnish detailed machine listings, together with the supporting punchcards, in lieu of GSA Forms 1166, 1209, 1166A, and 1209A.

7. Supplies of forms.

GSA Forms 1166, 1209, 1166A, and 1209A may be obtained from the General Services Administration, Printing and Publications Branch, Seventh and D Streets SW., Washington 25, D.C., telephone: Republic 7–7500 (Government dial code 181), extension 6453.

8. Agency liaison

Each reporting agency shall designate an official to serve as agency representative on this real property inventory. The same representative may be designated, if desired, for the United States Government-owned and the leased real property inventories. The General Services Administration, Office of the Comptroller, Washington 25, D.C., shall be advised in writing of the names of all such representatives or any changes in such designation.

9. Inquiries

For additional information regarding the content of this circular, or any questions or problems relating thereto, agency representatives may communicate with the General Services Administration, Office of the Comptroller, Washington 25, D.C., telephone: Executive 3–4900 (Government dial code 183), extension 4131.

FRANKLIN FLOETE, *Administrator.*

ATTACHMENT 1A

INSTRUCTIONS FOR THE PREPARATION OF GSA FORM 1166: ANNUAL REPORT OF REAL PROPERTY OWNED BY UNITED STATES GOVERNMENT

1. General instructions

(a) *Preparation of reports.*—GSA Form 1166: Annual Report of Real Property Owned by United States Government, shall be prepared each year, as of June 30. A complete report covering the entire installation shall be submitted for—

(1) Each newly acquired real property installation.

(2) Each transfer of an installation from another Federal agency which is not merged with an existing installation.

(3) Each installation previously reported having an increase or decrease of $1,000 or more, affecting any line item or total cost for the installation; or for a change in acreage, irrespective of cost. A report shall also be submitted for significant changes in the number of buildings, floor area, method of acquisition, and usage categories.

In the case of item (3) above, the adjusted report shall be a complete restatement, giving effect to all realty changes involving the installation, such as, acquisitions, dispositions, new construction, and correction of errors or omissions in the previous report.

A report, requiring no entries for Blocks 11 through 25 on GSA Form 1166, shall be submitted for—

(1) Disposition of a complete installation.

(2) Transfer of a complete installation to another Federal agency.

(3) An installation declared excess or surplus, in whole or in part (see (*c*) below).

(4) Revision of the name of an installation or of the date of acquisition of land and/or buildings.

An appropriate notation regarding the above transactions or revisions shall be made in block 26, "Remarks."

Reports shall not be submitted for installations having no changes since submission of the previous reports.

(*b*) *Reporting agency.*—Reports on federally owned real property shall be submitted by the agency responsible for the maintenance of real property records as prescribed in GAO Accounting Systems Memorandum No. 32, i. e., the agency which has control of and the authority to assign and reassign the use of property or any portion thereof. For purposes of this inventory, the above rule shall apply regardless of the manner of acquisition or which agency is now using the property. Examples of a reporting agency follow:

(1) For an office building or warehouse occupied by a Federal agency or agencies, upon determination by GSA, and for which GSA is responsible for elevator and guard service and for cleaning and maintenance, GSA is the reporting agency.

(2) In case of special purpose buildings, such as Coast Guard stations, military reservations, hospitals, and prisons, those agencies or bureaus thereof having control of building management and operations, including authority to assign or reassign space in such buildings, will be considered as the reporting agencies.

(*c*) *Excess and surplus real properties.*—GSA Real Property Management Regulations, title 2, require that each holding agency having control of excess and surplus real property shall retain accountability therefor until official written notice is received of the transfer or sale of such property. For purposes of this inventory, the holding agency of excess or surplus property shall report the various transactions and changes thereto in accordance with the instructions for reporting real property as set forth in this circular.

In reporting excess and surplus property or changes thereto, reference shall be furnished in block 26, "Remarks," to the GSA number assigned to SF 118: Report of Excess Real Property. (See GSA Reg. 2–IV–201.00.)

(*d*) *Installation.*—An installation, such as a national forest or park, military reservation or hydroelectric project, shall be considered as an individual reporting entity and shall be the subject of a single report, except for those installations located in more than one State. In the case of an installation located in more than one State, the portion located in each State shall be made the subject of a separate report, and thus shall be treated as a separate installation for purposes of this inventory. Each such report shall include all land, buildings, and other structures and facilities of an installation within a State.

In other cases, where a building and the site thereof, such as an office building, courthouse, post office, or warehouse, are all that comprise an installation, the property shall be considered as an individual reporting entity and shall be the subject of a single report. This same procedure shall be followed in the case of individual areas of improved or unimproved land.

(*e*) *Construction in process.*—Buildings, structures, and other facilities in process of construction shall be reported only if "available for service" as of the reporting date. However, sites acquired for such purposes, or for new projects, shall be reported regardless of whether or not the buildings, structures, or facilities are available for service. The usage classification of such sites shall be based on the intended use of the construction, whether or not in process.

(*f*) *Temporary buildings.*—A temporary building (not demountable) on a concrete foundation shall be reported. However, temporary buildings set up expressly for construction purposes shall not be reported.

(*g*) *Public buildings purchase contract program—Lease-purchase agreements.*—Buildings being acquired under Public Law 519, 83d Congress, as amended, shall be reported upon completion of construction and the execution of the purchase contract or lease-purchase agreement with the financing contractor.

(*h*) *Fixtures and equipment.*—For purposes of this report, the cost of buildings, structures, and other facilities shall also include the cost of such fixtures and equipment as are normally required for the functional use of the facility. For example, include plumbing, heating, and lighting fixtures, elevators, air-conditioning systems, as well as items such as safes and vaults, which are built into the structure or are permanently affixed thereto, the removal of which would materially damage the structure. However, the cost of all machinery and processing equipment, as well as furniture, laboratory equipment, and special use items which are not part of the realty, shall be excluded.

(*i*) *Easements and leasehold improvements.*—The cost of easements and rights-of-way, as well as improvements to land, buildings, or structures and facilities occupied by the Government as lessee, shall be excluded. However, the cost of federally owned buildings and/or structures and facilities located on leased land shall be included.

(*j*) *Utility systems.*—Where federally owned utility systems, such as gas, water, electric (power and light), sewer, etc., serve a single building, which is reported separately, the cost of such utility systems shall be included in the cost of the building. Where these systems (including water treatment, sewage-disposal plant, etc.) serve several buildings and structures, their cost shall be reported under other structures and facilities.

2. Specific instructions for preparation of GSA Form 1166

(*a*) *Date, agency, ana property identification.*

Block 1. Enter the effective date of the report.

Block 2. *Agency control No.*—For identification purposes, each reporting agency may assign an agency control number to each installation for which a separate report is submitted.

Block 3. *GSA control No.* —The GSA control number consists of two parts, separated by a dash. The first part, comprised of 4 digits, is the agency bureau code, while the second part, comprised of 5 digits, is the installation number. These control numbers are assigned by GSA.

If the report is for an installation previously reported, the reporting agency shall fill in the "GSA Control Number" for that installation, using the same control number shown on the GSA machine listing of installations as of the latest inventory furnished to each reporting agency by the General Services Administration. Use all nine digits, e. g., 1413–07984; not 1413–7984. It is essential that this GSA control number be filled in by the reporting agency so that the current report can be identified with the corresponding report previously submitted.

When an installation is reported for the first time, this block shall *not* be filled in by the reporting agency.

Block 4. *Name of installation.*—Enter the name assigned to the installation being reported such as United States customshouse, Fort Bragg, and Rock Island Arsenal. In case an installation is located in more than one State, a separate report is required to cover the portion of the installation located in each State.

Abbreviate the name of the property, when necessary so that it will not exceed, 23 letters (count each space between numbers or words as a letter). For example, "Yellowstone National Park," which has 25 letters, should be abbreviated to "Yellowstone Nat Park".

Block 5. *Reporting agency.*—Enter the name of the reporting agency; that is, the department, commission, administration, or authority. For example: Department of Commerce, Atomic Energy Commission, Veterans' Administration or Tennessee Valley Authority.

Block 6.—*Bureau or other major organization.*—Enter the name of the reporting bureau or comparable major organizational unit within the reporting agency. For example: National Bureau of Standards.

(*b*) *Location.*

Block 7.—*State or country.*—Enter the name of the State, United States Territory or possession, or foreign country in which the real property is located. When an installation is located in more than one State, a separate report shall be submitted to cover the portion of the installation located in each State.

Block 8.—*City or town.*—Enter the name of the city or town in which or near which the property is located, provided the nearby city is located in the same State and county (blocks 7 and 9). Otherwise, do not fill in this block.

Block 9.—*County.*—Enter the county, counties, parish, or parishes in which the property is located. (Separate reports for each county are not required). If space is insufficient, complete the list under "Remarks," block 26, or on the reverse of the form.

Block 10.—*Street address.*—Enter the street address, rural free delivery, route number, or other local designation.

Geographical code.—Enter the appropriate numerical code for the location of the installation as shown in blocks 7, 8, and 9 in the following sequence: State or continent (2 digits), city (4 digits), county or country (3 digits). (Example: Cape Canaveral, Brevard County, Fla., will be shown as 09–0453–009.)

Codes may be obtained from the publication, "Geographical Location Codes," issued by the Office of the Comptroller, General Services Administration. (See GSA Circular No. 146, dated November 4, 1957.) It may also be found in the latest GSA detailed inventory tabulation furnished to each reporting agency. Do not fill in this space if the geographical location code is not known.

When the location of the installation cannot be identified with any city (block 8), the code under "City" shall be reported as 9999. When the installation is located in more than one county (block 9), the code under "County" shall be reported as 999.

(*c*) *Land.*—Include all land areas or sites owned by the Government as of the reporting date. In the case of an installation comprised of both Government-owned and trust lands, separate reports on GSA Form 1166 shall be prepared for each.

Block 11. *Usage code and classification.*—Enter in this block the present predominant use and related code (see below) of the land area or site being reported. Sites acquired for new projects or on which construction is in process shall be classified for its eventual use. A breakdown of secondary usages is not required. If there are significant secondary usages, mention thereof should be made under "Remarks."

Enter one of the following usage codes and classifications in blocks 11 (A) and 11 (B), respectively, as appropriate:

Code	*Classification*	*Code*	*Classification*
01	Agricultural	16	Reclamation and irrigation
04	Grazing	18	Flood control and navigation
07	Forest and wildlife	19	Vacant
08	Parks and historic sites	20	Institutional
10	Office building locations	30	Housing
11	Military (except airfields)	40	Storage
12	Airfields	50	Industrial
13	Harbor and port terminals	80	Other land
15	Power development and distribution	99	Trust land

The above usage codes and classifications shall be used exclusively by all agencies for purposes of reporting land on GSA Form 1166.

If the report covers only Government-owned buildings and/or structures and facilities, but the land is (1) leased, (2) held under permit, or (3) jointly held and another agency is reporting such land, so state in this block. Give additional details in block 26, if necessary. However, no entries shall be made in blocks 12–16 when land is held under these conditions.

Block 12. *Acquisition code.*—Enter the code number for each method of acquisition of the land being reported. The codes to be entered in this block are as follows:

Code No.	*Method of acquisition*
1	Public domain (applicable only for installations in United States and Alaska).
2	Purchase, donation, exchange, etc.
3	Life interest (applicable only for installations in the Canal Zone and foreign countries).

Include under code 1 all public-domain lands including those withdrawn from public domain. Include under code 2 any land acquired by purchase, donation, exchange, and other methods of acquisition (other than public domain and life interest.) Include under code 3 all real property in which the United States Government has a life interest, such as those acquired by treaty or long-term lease, (e. g., 99 years, in perpetuity) and which the reporting agency, as a matter of policy, considers as the equivalent to ownership by the United States.

Block 13. *Date(s) acquired.*—Enter the year in which the land was originally acquired by the Federal Government for each method of acquisition set forth in block 12. For public domain land withdrawals, show the date of the Executive order or the public land order as the date of acquisition. If various portions were acquired at different dates, indicate the range of dates thereof, such as "1910–21."

Blocks 14 and 15. *Area, urban and rural.*—Entries shall be made to the *nearest 10th of an acre.* If acreage to be reported is a whole figure, enter "0" to the right of the decimal, e. g., 10.0.

Urban.—For purposes of this report, land shall be classified as urban when (1) located in an incorporated place of 2,500 or more, (2) in a densely settled unincorporated place of 2,500 or more, or (3) in a densely settled urban fringe area around cities of 50,000 or more. (Reference: United States summary and maps in vol. I of the 1950 Population Census which lists urban places in each State.)

Enter in this block the area of urban land, to the nearest 10th of an acre, acquired by each method of acquisition reported in block 12.

Rural.—Classify as rural all properties not classified as urban. Enter in this block the area of rural land, to the nearest 10th of an acre, for each method of acquisition reported in block 12.

Block 16. *Cost.*—Enter the cost of land to the Federal Government, *rounded to the nearest thousand dollars,* for each entry in block 12, except for (1) properties held in trust, (2) unreserved public domain, (3) public domain reserved for national forests, national parks, military installations, or other purposes, and (4) land acquired for historical sites other than by purchase.

Costs need not be reported for acquired lands which are intermingled with public-domain lands and which constitute a relatively minor portion thereof.

The cost of sites for monuments, memorials, and statues shall be reported, except for sites of the types described in the two preceding paragraphs.

The cost of items incidental to the acquisition or preparation of land for use, should generally be included in the cost of the land. For example:

Appraisal	Legal fees and expenses
Clearing	Plats and surveys
Damage to property of others	Removal and relocation of the property of others as part of purchase contract
Drainage	Removal of structures or facilities purchased, but not used
Grading	
Landscaping	

However, the above land improvements when applied to public domain lands shall be reported as costs under Code 80: "Other Structures and Facilities," blocks 23 and 24, and identified as such in "Remarks," block 26; rather than as costs under "Land."

If cost is less than $500, enter cost as "0." Costs of $500 or over should be reported to the nearest thousand dollars. For example: if records indicate a cost of $500, round to "1"; similarly, enter "1" for cost of $1,200. If records for acquisition costs are not available, report estimated costs and enter "E" after the amount. Such estimates shall be based on costs at date of original acquisition by the Government, adjusted for subsequent capital changes.

Estimate, if not known, the "cost" of property acquired through donation, devise, forfeiture, or judicial process. The estimated "cost" should represent the amount the Government would have had to pay for the land if purchased at the date of original acquisition.

(d) *Buildings.*—For purposes of this report, include buildings completed and available for service as of the reporting date.

In the case of an installation comprised of both Government-owned and trust buildings, a separate report on GSA Form 1166 shall be prepared for each. With regard to buildings held in trust by the reporting agency, blocks 20, 21, and 22 shall not be filled in.

For purposes of this inventory, include buildings being acquired under the "Public Buildings Purchase Contract Program or Lease-PurchaseAgreements," Public Law 519, 83d Congress, as amended. Buildings shall be reported upon completion of construction and the execution of the purchase contract or lease-purchase agreement with the financing contractor.

Block 17. *Usage code and classification.*—For purposes of this report, the *predominant use* of a building, as of the effective date of the report, shall govern its classification on the basis of the following categories:

(10) *Office.*—When the largest segment of the total area of a building is used for office space.

(21, 22, 23, and 29) *Institutional.*—Buildings devoted to institutional uses, such as hospitals, prisons, schools, libraries, chapels, and museums. Do not include minor emergency or health rooms, chapels, and libraries which constitute only a small portion of a building used primarily for other purposes. Report information on lines 21, 22, 23, and 29, respectively, designated for hospitals, prisons, schools, and "Other institutional buildings." The latter shall include institutional buildings, such as libraries and museums.

(30) *Housing.*—Buildings used primarily for dwelling purposes, such as apartment houses, single or row houses, and barracks. Includes public housing, housing for military personnel, housing for institutional personnel, and housing built primarily for personnel in various Federal agencies.

(40) *Storage.*—Buildings used for storage purposes, such as warehouses, ammunition storage, and cover sheds. Also include in this category garages used primarily for storage of vehicles or materials. Do not include such facilities as water reservoirs and oil storage tanks, which are to be reported as "Other structures and facilities," blocks 23 and 24.

(50) *Industrial.*—Buildings specifically designed and used primarily for production, manufacturing, or developmental purposes. Include in this category buildings used for the production or manufacture of ammunition, aircraft, ships, vehicles, electronic equipment, chemicals, aluminum, and magnesium. Also include in this category laboratories used for industrial purposes. Exclude laboratories of a nonindustrial nature.

(60) *Service.*—Buildings used in connection with service activities, such as maintenance and repair shops, laundry and dry cleaning plants, post exchanges, stores, garages (used primarily for vehicle maintenance and repair), and airport hangars.

(80) *All other.*—Buildings which cannot be classified elsewhere. Whenever this classification is utilized, give a brief description of use in "Remarks" block.

(99) *Trust buildings.*—All buildings held in trust by the reporting agency.

Block 18. *Number of buildings.*—Enter the number of buildings for each applicable usage classification printed in block 17.

Block 19. *Date(s) acquired.*—Enter the date the building was originally acquired by the Federal Government. In cases where several buildings of the same classification were acquired at different dates and are being reported on a single line, indicate the range of dates, such as "1930–42."

Block 20. *Gross floor area, total square feet.*—Enter the total gross floor area (applies to outer dimensions of the building) in square feet, for each class of building reported. However, floor area shall not be reported for buildings held in trust. Include the total floor area of the building(s), regardless of any secondary usages or occupancy by another agency.

Block 21. *Gross floor area, percent occupied.*—Enter the estimated percentage of occupancy or use for each applicable class of building printed in block 17. However, percent occupied shall not be reported for buildings held in trust by the reporting agency.

For buildings which are outleased 100 percent, enter the letters "OL" in this column. When only a portion of a building is outleased, the percent occupied shall be the percentage used by the Federal Government. A brief statement regarding the outlease shall be included in the "Remarks" block.

Block 22. *Cost.*—Enter in this block the total cost to the Federal Government, *reported to the nearest thousand dollars,* for each class of building reported. However, cost shall not be reported for buildings held in trust by the reporting agency. Costs shall include the cost of any capital improvements (additions or betterments) incurred subsequent to date of original acquisition by the Government. Costs for Government-owned buildings on leased land shall also be included.

If the cost is less than $500, enter cost as "0." Enter other cost entries to the *nearest thousand dollars* as described for block 16, above.

In the absence of any recorded data as to costs, they shall be estimated and noted by "E" after the amount. Estimates shall be based on costs at date of original acquisition by the Government, adjusted for subsequent capital changes.

Estimate, if not known, the "cost" of the buildings acquired through donation, exchange, devise, forfeiture, or judicial process. The estimated "cost" should represent the amount the Government would have had to pay for the buildings if purchased at the date of original acquisition.

The cost of buildings being acquired under the "Public Buildings Purchase Contract Program or Lease-Purchase Agreements," Public Law 519, 83d Congress, as amended, shall be recorded at purchase price (total amount of principal payments), plus all other capitalized costs: such as drawings and specifications; architectural, engineering and inspection fees; and miscellaneous project costs. For identification purposes, the letter "P" should be inserted after the amount and a brief explanation given in block 26, "Remarks."

(*e*) *Other structures and facilities.*—

Block 23. *Usage code and classification.*—The various usage categories are preprinted in this block. The coverage of each of these usage categories follows:

Code	*Classification*
13	*Harbor and port facilities.*—Include docks, piers, jetties, and breakwaters situated on federally owned land.
15	*Power development and distribution.*—Include hydroelectric and other power development projects which produce power for resale (generally consisting of dams and powerhouses). Transmission lines which are an integral part of Federal power development systems shall also be included even though the power is produced by another Federal agency.
16	*Reclamation and irrigation.*—Include canals, laterals, pumping stations, storage and diversion dams.
18	*Flood control and navigation.*—Include river improvements, revetments, dikes, docks, and navigational aids situated on federally owned land.
40	*Storage (other than buildings).*—Include storage tanks, silos, igloos, underground vaults, and open storage areas (improved only).
50	*Industrial.*—Include facilities other than buildings used for production, manufacturing or developmental purposes, such as sliding shipways, retaining basins, and pipelines.
71	*Utility systems (heating, sewage, water, and electrical systems).*—Under this category, heating, sewage, water, and electrical systems are reported when they serve several buildings and structures of an installation. When they serve a single building which is reported separately, the cost of such utility systems shall be included in the cost of the building. The usage category for "utility systems" includes heating plants and related steam and gas lines; sewage disposal plants, storm and sanitary sewer lines; water treatment plants, wells, pumphouses, reservoirs, and pipelines; and electrical substations, standby or auxiliary powerplants, lighting structures, and conduits. Structures and facilities utilized by an installation in the production of its own power requirements (not for resale) shall be included in this category.
72	*Communication systems.*—Include telephone and telegraph lines and radio towers.
76	*Roads and bridges.*—Include federally owned highways, roads, related culverts, and connecting bridges. Also include roads within national parks and forests and other Federal installations.
77	*Railroads.*—Include tracks and bridges, tunnels, fuel and water stations servicing railroads.
78	*Monuments and memorials.*—Include all Federal monuments, memorials, and statues.
79	*Miscellaneous military facilities.*—Include all structures and facilities of the Department of Defense (military functions) not included in any other classification.

80 *Other.*—Include sidewalks, parking areas, fences, and trails, which cannot be readily classified under the above categories. Include, also, improvements to public domain lands; such as drainage, grading, and landscaping.

Block 24. *Costs.*—Enter in this block the total cost to the Federal Government, *to the nearest thousand dollars,* opposite each applicable usage category printed in block 23.

Costs shall include the cost of any capital improvements (such as additions or betterments) incurred subsequent to the date of acquisition.

The cost of Government owned structures and facilities located on leased land shall be included.

Costs shall not be reported for (1) other structures and facilities held in trust and (2) historic structures, monuments, memorials, and statues donated to the Federal Government.

In the absence of any recorded data, costs shall be estimated and noted by "E" after the amount. Estimates shall be based on costs at date of original acquisition by the Government, adjusted for subsequent capital changes.

Estimate, if not known, the "cost" of structures and facilities acquired through donation, exchange, devise, forfeiture, or judicial process. The estimated "cost" should represent the amount the Government would have had to pay for the structures or facilities if purchased at the date of original acquisition.

Block 25. *Total cost: Land, buildings, other structures and facilities.*—Enter the sum of the totals of blocks 16, 22, and 24.

(f) *Remarks.*—

Block 26. If it is necessary to clarify or expand any entries beyond the space provided in the various blocks, make such notations in this block or on the reverse of the form.

Indicate in this block whether the installation being reported is being used by other than the reporting agency. In the event that an installation being reported on GSA Form 1166 is considered as excess, in whole or in part, to the needs of the reporting agency, suitable notation shall be made in this block. This notation should indicate whether such installation, or portion thereof, has been or is being reported as excess to the General Services Administration, or has been determined to be surplus in accordance with the provisions of GSA regulations, title 2 on Real Property Management. The GSA Control Number assigned to SF 118: Report of Excess Real Property, should be furnished when practicable.

(g) *Type of transaction.*—

Block 27. *Type of transaction.*—Check the appropriate box in block 27 to reflect the nature of the real property change for each installation between the current and the prior inventory report. When practicable, include in "Remarks" a short notation giving an explanation of the change. Descriptions of the various types of transactions follow:

Code No.	*Description*
1	*New acquisition.*—Include newly acquired installations obtained by purchase, construction, or other means. Do not include transfers from other Federal agencies or additions to installations previously reported.
2	*Omission.*—Include only complete installations erroneously omitted from the inventory for the prior fiscal year.
3	*Transfer in.*—Include only installations transferred from other Federal agencies which are not merged with existing installations. Transfers-in which become part of an existing installation shall be coded *6.*
4	*Disposal.*—Include only complete installations disposed of by the Federal Government through sale, donation, exchange, or other disposition to private citizens and organizations or to State and local governments. Do not include transfers to other Federal agencies.
5	*Transfer out.*—Include only complete installations transferred to other Federal agencies.
6	*Revision.*—Include all changes not covered by one of the above codes. These changes include additions to installations previously reported, disposition of a part of an installation previously reported, capital improvements, writeoffs, and corrections to prior years reports.

(h) *Signature and date.*—

Block 28. *Prepared by.*—Type in the name and title of the official responsible for the preparation of this report.

Block 29. *Signature.*—The official designated in block 28 shall sign his name in this block.

Block 30. *Date.*—Enter date on which the report was prepared.

ATTACHMENT 2a

INSTRUCTIONS FOR PREPARATION OF GSA FORM 1209, SUMMARY OF NUMBER OF INSTALLATIONS OWNED BY UNITED STATES GOVERNMENT

1. General instructions

The Summary of Number of Installations Owned by United States Government, shall be prepared on GSA Form 1209 by each reporting agency for each bureau or other organizational unit, whether or not such agency is required to submit GSA Form 1166 for its real property.

The GSA Form 1209 is intended to provide a reconciliation between the number of installations previously reported and the number of installations as of the new inventory date to avoid omissions or duplications in the inventory.

A separate GSA Form 1209 shall be prepared, as of June 30 of each year, for each bureau or other comparable major organizational unit covering (*a*) properties in the United States, and (*b*) properties outside the United States. An original and one carbon of these forms shall be submitted to the General Services Administration by September 1, accompanied by the related GSA Forms 1166, when appropriate.

2. Specific instructions for the preparation of this summary follows:

(*a*) *Summary identification.*—Enter the effective date of the report. Place a check mark in the appropriate box to indicate whether the accompanying GSA Forms 1166 cover properties in the United States or outside the United States.

(*b*) *Reporting agency.*—Enter in this block the name of the reporting agency; that is, the department, commission, administration, or authority. For example: Department of Commerce, Atomic Energy Commission, Veterans' Administration, or Tennessee Valley Authority.

(*c*) *Bureau or other major organizational unit.*—Enter on this line the name of the bureau or other comparable major organizational unit within the reporting agency. For example: National Bureau of Standards or Bureau of Land Management.

(*d*) *Items.*—

Item A. Enter the number of installations previously reported as of the end of the prior fiscal year. This number must agree with that shown in the detailed electrical accounting machine listings of the previous inventory reports, copies of which have been furnished by the General Services Administration to each reporting agency.

Item B. Enter (in both columns) the number of newly acquired installations not previously reported by the present reporting agency. Do not include transfers from other Federal agencies.

Item C. Enter (in both columns) the number of complete installations erroneously omitted from the inventory in the prior fiscal year.

Item D. Enter (in both columns) the number of reports representing transfers of either complete or partial installations from other Federal agencies. Transfers-in which become a part of an existing installation shall be reported as item G.

Item E. Enter (in both columns) the number of complete installations disposed of by the Federal Government. Transfers to other Federal agencies shall be reported separately as item F.

Item F. Enter (in both columns) the number of reports representing the transfer of complete installations to other Federal agencies.

Item G. Enter the number of reports affecting installations previously reported and still in the inventory for which changes have occurred during the fiscal year. Include all revised reports not specifically provided for in items B through F, above.

Item H. Enter the sum of items A, B, C, and D less the sum of items E and F. This figure represents the total number of installations controlled by the reporting agency as of the inventory date.

Item I. Enter the sum of items B, C, D, E, F, and G. This figure represents the total number of GSA Forms 1166 currently being submitted.

(*e*) *Remarks.*—Give a brief résumé of major changes since the last inventory or of any significant trends which may be included in a report to the Congress to present the agency's viewpoint on real property changes.

(*f*) *Signature and date.*—

Prepared by: Type in the name and title of the official responsible for the preparation of the report.

Signature: The official designated as responsible for the preparation of the report shall sign his name in this block.

Date: Enter date on which the report was prepared.

Attachment 3a

Instructions for the Preparation of GSA Form 1166A: Annual Report of Real Property Leased to United States Government

1. GENERAL INSTRUCTIONS

a. Preparation of reports

GSA Form No. 1166A: Annual Report of Real Property Leased to United States Government, shall be prepared annually by all reporting agencies, covering their leased real property as of June 30 of each year. This report shall include all real property leased to the United States Government from private individuals and organizations, and from municipal, county, State, and foreign governments, as evidenced by a written agreement involving a monetary consideration and a landlord-tenant relationship. It shall also include right of use and occupancy obtained under eminent domain proceedings or equivalent procedures.

Items to be excluded from the annual reports are (1) real property occupied under permit or other arrangements with other Federal Government agencies or

wholly owned Federal Government corporations; (2) leasehold improvements (but Government-owned buildings or structures located on leased land shall be reported as federally owned); (3) rights-of-way and easements; and (4) real property leased rent free or for nominal rent, unless the property is significant.

Examples of properties to be excluded are (1) building space and/or land made available to the Federal Government, rent free, or for nominal payment, such as rooms in courthouses, county buildings, universities, and (2) land upon which the Government has been granted an easement, right-of-way, or permit to place power transmission lines, gaging stations, fire lookout towers, and revetments. Determination as to whether the item is significant and is rent free or for nominal rental is the responsibility of the reporting agency. 35 Comp. Gen. 713 is suggested as a guide to help resolve questions pertaining to the definition of "nominal payment."

b. Reporting agency

For purposes of the inventory of leased properties, the reporting agency is the one currently administering the lease and making rental payments to the lessor, regardless of which agency made the original lease or is currently using the property.

c. Reporting entity

An individual report shall be submitted for a lease or combination of leases covering (1) buildings and portions thereof, (2) buildings with land, and (3) land only. Real property leased to the United States shall be reported as follows:

(1) *Buildings and portions thereof.*—Leases for buildings or portions of buildings shall be reported, as follows:

(a) *Annual rental of $2,000 or more.*—Each lease executed for a single building, a portion of a building, such as an office building, post office, or warehouse, with an annual rental of $2,000 or over, shall be the subject of a separate report.

(b) *Annual rental less than $2,000.*—At the discretion of the agency, a lease executed for a single building or portion thereof, for which the annual rental rate is less than $2,000, may be combined with similar leases to form a single report, providing the location of the buildings is in one of the following categories:

(*1*) Major city in the United States (only cities listed in attachment 5).

(*2*) State (excluding leases for buildings or portions of buildings in major cities).

(*3*) United States Territory or possession, or foreign country.

(2) *Buildings with land.*—Leases covering one or more buildings with land, such as a supply depot or a consulate, shall be the subject of an individual report.

At the discretion of the agency, a lease covering both buildings and land with an annual rental rate of less than $2,000 may be combined with similar leases to form a single report, providing the location of the property is in one of the following categories:

(*a*) Major city in the United States (only cities listed in attachment 5).

(*b*) State (excluding land and buildings in major cities).

(*c*) United States Territory or possession, or foreign country.

(3) *Land only.*—Leases covering land only may include unimproved lands, as well as land upon which federally owned buildings or other improvements have been constructed or are under construction. (The Federal agency controlling buildings and other structures owned by the U.S. Government on leased land shall report them on GSA Form 1166). These leases shall be reported as follows:

(*a*) *Annual rental of $500 or more.*—Leases for land only with an annual rental of $500 or over shall be the subject of a separate report.

(b) *Annual rental less than $500.*—At the discretion of the agency, a lease for land with an annual rental rate of less than $500, may be combined with similar leases to form a single report, providing the location of the land is in one of the following categories:

(*1*) Major city in the United States (only cities listed in attachment 5).

(*2*) State (excluding land in major cities).

(*3*) United States Territory or possession, or foreign country.

When leases have been combined to form a single report, supporting detailed information for each lease shall be available in the files of the reporting agency.

In no case shall a report cover real property in more than one State. When a lease covers property in more than one State, a separate report shall be prepared for the property in each.

49199—60——16

2. SPECIFIC INSTRUCTIONS

a. Date, agency, and property identification

Block 1. Enter effective date of the report.

Block 2. *Agency control number.*—For purpose of identification, each agency may assign a control number for each report submitted.

Block 3. *GSA control number.*—Leave this space blank. For use by General Services Administration only.

Block 4. *Name of property.*—Enter the commonly used name for the property being reported, such as United States Post Office, American Embassy or Wilkins Building. When a building has no name use the street address or other local designation. For consolidated reports covering more than one lease insert the word "Consolidation" in this block.

Abbreviate the name of the property, when necessary, so that it will not exceed 23 letters (count each space between numbers or words as a letter). For example, "First National Bank Building", which has 28 letters, should be abbreviated to "First Nat Bank Bldg."

Block 5. *Reporting agency.*—Enter the name of the agency currently administering the lease and making rental payments to the lessor, regardless of which agency made the original lease or is currently using the property. For example: Department of Commerce, Atomic Energy Commission, or Tennessee Valley Authority.

Block 6. *Bureau or other major organization.*—Enter the name of the reporting bureau, or comparable major organizational unit, within the reporting agency; for example, National Bureau of Standards.

b. Location

Block 7. *State or country.*—Enter the name of the State, United States Territory or possession or foreign country in which the real property is located. When an installation is located in more than one State, a separate report shall be submitted to cover the portion of the installation located in each State.

Block 8. *City or town.*—Enter the name of the city or town in which or near which the property is located, provided the nearby city is located in the same State and county (blocks 7 and 9). Otherwise, do not fill in this block.

Block 9. *County.*—Enter the county, counties, parish, or parishes in which the property is located. (Separate reports for each county in the same State are not required.) If space is insufficient, complete the list under "Remarks," block 24, or on the reverse of the form.

Block 10. *Street address.*—Enter the street address, rural free delivery, route number, or other local designation. When the street address is the same as the building name, this block may be left blank.

Geographical code: Enter the appropriate numerical geographical code for the location of the property as shown in blocks 7, 8, and 9 in the following sequence: State or continent (2 digits), city (4 digits), county or country (3 digits). (Example: Cape Canaveral, Brevard County, Fla., will be shown as 09–0453–009).

Codes may be obtained from the publication Geographical Location Codes, issued by the General Services Administration. (See GSA Circular No. 146, dated November 4, 1957.) It may also be found in the latest GSA detailed inventory tabulation furnished to each reporting agency. Do not fill in this space if the geographical location code is not known.

When the location of the property or properties cannot be identified with a single city (block 8), the code under "City" shall be reported as 9999. When the property or properties cannot be identified with a single county (block 9), the code under "County" shall be reported as 999.

c. Land

Land shall be reported only when specifically provided for in the lease. Easements, rights-of-way, and encroachments shall not be reported.

Block 11. *Usage code and classification.*—Enter the predominant use and related code of land area or site as of the effective date of the report. A breakdown of secondary usages is not required.

Leased land shall be classified on the same basis as federally owned land except for post offices. Land leased in conjunction with a post office and used predominantly as a general service and access area shall be reported as Code 14. Post Office Land. Applicable definitions of all usage categories, other than post office land, are contained in attachment 1a of this circular.

Blocks 12 and 13. *Area, urban and rural.*—Enter the total acreage for every usage code reported in block 11, rounded to the nearest 10th of an acre. If acreage to be reported is a whole number, enter "0" to the right of the decimal, e. g., 10.0. A minimum report shall be one tenth of an acre, e. g., 0.1.

Urban: For purposes of this report, land shall be classified as urban when (1) located in an incorporated place of 2,500 or more, (2) in a densely settled unincorporated place of 2,500 or more, or (3) in a densely settled urban fringe area around cities of 50,000 or more. (Reference: United States Summary and Maps in Volume I of the 1950 Population Census, which lists urban places in each State). Enter in this block the total acreage of urban land acquired for each usage category reported in block 11.

Rural: Classify as rural all properties not covered under "urban" as defined above. Enter in this block the total acreage of rural land for each usage category reported in block 11.

d. Buildings

Block 14. *Usage code and classification.*—For purposes of this report, the predominant use of the space in each leased building location, as of the effective date of the report, shall govern its classification. Every entry in this block requires a square footage entry in block 16.

Leased buildings shall be classified on the same basis as federally owned buildings, except for post offices. Buildings or portions of buildings leased for use as post offices should be reported as Code 14. Post Office.

Applicable definitions of all usage categories, other than post offices, are contained in attachment 1a of this circular.

Block 15. *Number of locations.*—Enter the number of building locations for each applicable usage classification printed in block 14.

Block 16. *Floor area leased—Total square feet.*—Enter the square feet of floor area under lease for each class of building reported. Include the total floor area under lease, regardless of any secondary usages or areas used by other occupying agencies under permit or other arrangements.

e. Other structures and facilities

Block 17. Place a check mark in the space provided in block 17 if the lease provides for the rental of any structures or facilities.

Block 18. Enter the usage classification and a brief description of leased structures or other facilities. The usage classification applicable to the federally owned real property, as defined in attachment 1a, shall also be used exclusively for reporting leased structures and facilities in this block.

f. Lease terms

When the report covers a single lease, entries shall be made in blocks 19 through 23.

When a consolidated report is made covering leases within the same installation, State, country, or city, entries shall be made only in block 19 and block 23.

Block 19. *Number of leases.*—Enter the number of leases included in this report.

Block 20. *Effective date.*—Enter the numerical designation, using six digits, for the month and year that the current lease became effective, e. g., 06–1941 for June 1941.

Block 21. *Expiration date.*—Enter the numerical designation for the month and year that the current lease will terminate, e. g., 12–1959 for December 1959. If any option has been exercised, the expiration date of the extended period shall be used. In no case shall this date be prior to the effective date of this report. When the expiration date of the lease is indefinite, such as in a month-to-month or year-to-year lease, enter 99–9999.

Block 22. *Period renewal option.*—When the agreement provides that the United States Government may renew the lease beyond the expiration date of the current lease, enter the remaining renewal period to the nearest whole year using two digits, e. g., (3 years) 03. Enter an "X" in this block if one of the following conditions exists: (1) the lease contains no renewal provision; (2) the renewal option is for less than 6 months; (3) the expiration date of the lease is indefinite.

Block 23. *Annual rental rate.*—Enter the annual rental rate for the leased property to the nearest whole dollar. When the rental period is less than 1 year or the rental is paid on a monthly, daily, or other than an annual basis, convert the rate to an annual basis. If the rental is nominal or free, but the lease provides for payments to the lessor for utilities and/or services, enter the annual rental rate as specified in the lease. The other amounts paid to the lessor shall not be included in the rental figure. If the agency wishes to report such payments, they shall be entered in the "Remarks" block.

g. Remarks

Block 24. *Remarks.*—If it is necessary to clarify or expand any entries beyond the space provided in the various blocks, make such notations in this block and continue, as necessary, on the reverse of the form.

h. Signature and date

Block 25. *Prepared by.*—Type in the name and title of the official responsible for the preparation of the report.

Block 26. *Signature.*—The official designated in block 25 shall sign his name in this block.

Block 27. *Date.*—Enter the date on which the report was prepared.

INSTRUCTIONS FOR THE PREPARATION OF GSA FORM 1209A: COMPARATIVE SUMMARY OF PROPERTIES LEASED TO UNITED STATES GOVERNMENT

1. GENERAL INSTRUCTIONS

The "Comparative Summary of Properties Leased to United States Government," shall be prepared on GSA Form 1209A by each reporting agency, for each bureau or comparable major organizational unit. A separate GSA Form 1209A shall be prepared, as of June 30 each year, covering leased real property (*a*) in the United States, and (*b*) outside the United States. An original and one copy of this form, together with the related GSA Forms 1166A, shall be submitted to the General Services Administration by October 1.

The GSA Form 1209A is intended to provide (*a*) control over individual inventory reports on leased properties submitted on GSA Form 1166A for the current year, and (*b*) a comparison between data previously reported and the current report to show changes in leases between inventory reports.

2. SPECIFIC INSTRUCTIONS

a. Summary identification

Check the applicable block in the upper right-hand corner of the form to indicate if the summary is for real property located (*a*) in the United States, or (*b*) outside the United States. Enter the effective date of the report.

b. Agency and bureau identification

Reporting agency.—Enter in this block the name of the reporting agency, that is, the controlling department, commission, administration, or authority. For example: Department of Commerce, Atomic Energy Commission, Veterans' Administration, or Tennessee Valley Authority.

Bureau or other major organization.—Enter in this block the name of the bureau, or comparable major organizational unit, within the reporting agency; for example, National Bureau of Standards.

c. Summary data

Column (c) current GSA Forms 1166A.—This column shall contain a summarization and consolidation of statistics included in the Annual Reports of Real Property Leased to United States Government, GSA Forms No. 1166A, submitted for the current inventory. Data for each line of this column shall be entered as described below.

Line 1. Enter the number of GSA Forms No. 1166A submitted in the current report.

Line 2. Enter the total number of leases in effect on the inventory date by adding the entries in block 19 of all GSA Forms 1166A submitted.

Line 3. Enter the total acreage leased by adding the totals of blocks 12 and 13 of all GSA Forms 1166A submitted.

Line 4. Enter the total number of building locations leased by adding the totals of block 15 on all GSA Forms 1166A submitted.

Line 5. Enter the total square feet of floor area leased by adding the totals of block 16 of all GSA Forms No. 1166A submitted.

Line 6. Enter the total annual rental reported for leased real property by adding the entries in block 23 of all GSA Forms 1166A submitted.

Column (d) prior GSA Forms 1166A.—This column shall not be completed for the first year an agency submits its report. Data for completion of this column shall be obtained from the previous year's detailed listing of leases furnished to each agency by the General Services Administration.

Column (e) difference.—Enter on each line the result of column (c) minus column (d). Enter negative quantities in parentheses, e. g., (312). Column (e) shall not be completed for the initial report submitted by an agency.

d. Signature and date

Prepared by.—Type in the name and title of the official responsible for the preparation of the report.

Signature.—The official designated as responsible for the preparation of the report shall sign his name in this block.

Date.—Enter date on which the report was prepared.

e. Remarks

Significant changes in leases between the prior and current report shall be explained or commented on in this block. When as a result of a new program, or termination of an old program, an agency's leasing activity changes, the cause thereof shall be noted. Property management activities of a bureau or other major organization which result in net economies to the Government shall be explained. Program plans which will affect future leasing operations shall also be noted. All items which the bureau believes would interest the Congress, regulatory executive agencies, or the general public shall be described in this block.

Realty Inventory of the Architect of the Capitol as of June 30, 1959

[Current estimated evaluation of real property]

Land	$90, 839, 759
Buildings and improvements	276, 752, 556
Total real property	[1] 367, 592, 315

[1] Estimated present-day evaluation.

Note.—Properties included are: U.S. Capitol Building, Old and New Senate Office Buildings, Old and New House Office Buildings and Grounds, site of an additional Senate Office Building, site for an additional House Office Building and appurtenant facilities for the House of Representatives, Legislative Garage, Capitol Power Plant, Main and Annex Library of Congress Buildings and Grounds, U.S. Botanic Garden and Nursery, U.S. Supreme Court Building and Grounds, and U.S. Court of Claims Building.

REPORT OF FEDERAL REAL PROPERTY AS OF JUNE 30, 1959

U.S. Capitol buildings and grounds

Properties under legislative branch of the Government, occupied by the Congress.

Land:

Acquired by purchase.
Acquired: 1791 to 1959.
Area: 157 acres.
Cost: $22,013,271.
(Includes site acquired in 1949–59 for additional office building for U.S. Senate and in 1956–57 for additional office building and appurtenant facilities for U.S. House of Representatives.)

Buildings:

U.S. Capitol, Senate, and House Office Buildings and Legislative Garage.
Constructed: 1793 to 1959.
Floor area: 2,735,000 square feet.
Cost: $92,000,000 (to June 30, 1959).

1. Occupancy and use of these buildings and grounds controlled by the Congress.
2. Assignment and reassignment of space in Capitol under Speaker of House of Representatives and Senate Committee on Rules and Administration; in Senate Office Building under Senate Committee on Rules and Administration; in Old and New House Office Buildings under House Office Building Commission; in Legislative Garage under Vice President and Speaker of the House.
3. Architect of the Capitol has the physical care of these properties.

Capitol Power Plant

Property under the legislative branch of the Government. Supplies heat and air-conditioning refrigeration for the Capitol, Senate, and House Office Buildings; heat for the Library of Congress Buildings, U.S. Botanic Garden, U.S. Supreme Court Building, Legislative Garage, Government Printing Office, Washington City Post Office, and Folger Shakespeare Library.

Land:

Acquired by transfer.
Acquired: 1904.
Area: 6 acres.
Cost: Transferred without cost by act of Congress.

Buildings:

Main powerplant building: 244 by 117 feet, with maximum height of 85 feet.
Annex powerplant building: 90 by 50 feet, 2 stories high.
Refrigeration plant building: 123 by 80 feet, height approximately 38 feet.
Walk-through tunnels, containing steam and chilled water distribution lines.
Constructed: 1904 to 1954.
Cost: $17,800,000 (to June 30, 1959).

1. Architect of the Capitol has the physical care and operation of plant.
2. Plant under control of the House Office Building Commission.

Library of Congress buildings

Properties under legislative branch of the Government, occupied by the Library of Congress.

Land:

Acquired by purchase.
Acquired: 1886 to 1932.
Area: 15 acres.
Cost: $1,496,779.

Buildings:

Main and annex buildings, Library of Congress.
Constructed: 1889 to 1938.
Floor area: 1,600,000 square feet.
Cost: $20,938,800 (to June 30, 1959).

1. Occupancy and use of buildings and grounds controlled by the Congress.
2. Architect of the Capitol has structural and mechanical care of these properties.
3. All other care, including assignment and reassignment of space, under the Librarian of Congress.

U.S. Botanic Garden

Properties under legislative branch of the Government, occupied by the U.S. Botanic Garden, including Poplar Point Nursery.

Land:

Acquired by purchase, transfer, and public domain.
Acquired: 1851 to 1946.
Area: 33 acres.
Cost: $981,140.

Buildings:

Conservatories, greenhouses, office, storage and potting sheds.
Constructed: 1873 to 1933.
Floor area: 89,000 square feet.
Cost: $1,135,300 (to June 30, 1959).

1. Architect of the Capitol serves as Acting Director of U.S. Botanic Garden.
2. Botanic Garden under control of Joint Committee on the Library.

U.S. Supreme Court building

Property under the Chief Justice of the United States, occupied by the U.S. Supreme Court and the Administrative Office of the United States Courts.

Land:

Acquired by purchase.
Acquired: 1929–30.
Area: 8 acres.
Cost: $1,768,741.

Building:

U.S. Supreme Court Building.
Constructed: 1931–35.
Floor area: 392,737 square feet.
Cost: $10,575,800 (to June 30, 1959).

1. Occupancy and use of building and grounds controlled by the Congress.
2. Architect of the Capitol has structural and mechanical care of building.
3. All other care under Marshal of the Court, except assignment and reassignment of space which is under the Court.

U.S. Court of Claims buildings

Property occupied by and under the control of the U.S. Court of Claims.

Land:

Acquired by purchase.
Acquired: 1901–02.
Area: One-half acre.
Cost: $100,000.

Buildings:

U.S. Court of Claims buildings.
Acquired in 1902.
Floor area: 37,000 square feet.
Cost: $245,000 (to June 30, 1959).

1. Occupancy and use of building and grounds controlled by the Congress.
2. Architect of the Capitol has structural and mechanical care of the buildings.
3. All other care, including assignment and reassignment of space, under the court.

PART VI

INVESTMENTS IN RELATED AREAS (REALTY) OF THE EXECUTIVE AGENCIES, OFFICES, AND ESTABLISHMENTS OF THE UNITED STATES GOVERNMENT, INCLUDING THE DEPARTMENT OF DEFENSE, COVERING INVESTMENTS NOT INCLUDED IN OVERALL REPORT, AS OF JUNE 30, 1959

THE ASSISTANT SECRETARY OF COMMERCE,
Washington, D.C., October 27, 1959.

Hon. WILLIAM L. DAWSON,
House of Representatives, Washington, D.C.

DEAR MR. DAWSON: This is in response to your letter of March 9, 1959, in which you asked for a report by November 1, 1959, of Department of Commerce acreage listed at "no value" or recorded at $1 for accounting purposes.

The desired information is as follows:

Location	Usage	Number of acres	Estimated present-day evaluation
Surrey Mountain, N.H.	Secular chain station, magnetic repeat program.	7.2	$3,600
Outwood, Ky.	do	3.90	500
Fairbanks, Alaska	Apartment site	.4	8,700
Silvertip, Alaska	Road maintenance site.	20	2,000
Total		31.50	14,800

Sincerely yours,

GEO. T. MOORE, *Administration.*

Department of Defense

Washington, D.C.

At the request of the House Committee on Government Operations, an estimate has been made of the current value of the donated land and of the public domain land which is controlled by the Department of Defense. These estimates for either public domain or donated lands are not included in the $151.4 billion book value total of the real and personal property for military use or the $6.4 billion total for civil functions.

The estimates for public domain lands are shown in tables 4 and 5. Table 4 shows total estimates for military and civil functions separately, and table 5 distributes the estimates for military functions by military department.

The estimates for the lands donated to the Department of Defense are shown in tables 6 and 7. Table 6 shows total estimates for military and civil functions separately, and table 7 distributes the estimates for military functions by military department.

The types of activities on the donated lands used for military and civil functions include:

MILITARY FUNCTIONS

Reserve training centers
National Guard training
Military headquarters
Hospitals
Depots
Industrial College of the Armed Forces
Naval air stations
Naval stations
Shipyards
Housing annexes
Radio ranges
Cemeteries

CIVIL FUNCTIONS

Flood control
Navigation
Harbors
Harbor and port terminals
Storage

TABLE 6.—*Acreage and estimated present-day valuation of donated land used for military and civil functions—by location as of June 30, 1959*

[Thousands of dollars]

Location	Military functions		Civil functions

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE,
Washington, D.C., September 24, 1959.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D.C.

DEAR MR. DAWSON: Attached are the data concerning acreage of real property listed at zero value as requested in your letter of February 16, 1959.

Should you need further assistance, we will be happy to serve you.

Sincerely yours,

RUFUS E. MILES, Jr.,
Director of Administration.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

GSA WASH DC 58-15317

GSA FORM 1166 MAY 1958

DEPARTMENT OF JUSTICE,
Washington, D.C., August 10, 1959.

Hon. WILLIAM L. DAWSON,
Chairman, Executive and Legislative Reorganization Subcommittee of the Committee on Government Operations, Washington, D.C.

DEAR CONGRESSMAN DAWSON: This is in further reply to your letter of February 25, 1959, requesting that your committee be furnished direct estimated present-day evaluation of acreage which is presently listed at zero value. The data has now been collected and is tabulated below:

Immigration and Naturalization Service

Location	Number of acres	Use	Estimated evaluation
Nighthawk, Wash	3.0	Border station (trailer)	$60
El Centro, Calif	4.6	Border patrol pistol range	1,610
Do	5.0	Border patrol sector headquarters and detention facility.	11,500
Eagle Pass, Tex	.69	Border patrol office	3,800
Carrizo Springs, Tex	.3	do	4,250
Laredo, Tex	21.1	Border patrol sector headquarters	8,435
Zapata, Tex	1.9	Border patrol office and housing	10,000
Total	36.59		39,655

Sincerely yours,

S. A. ANDRETTA,
Administrative Assistant Attorney General.

TREASURY DEPARTMENT,
Washington, December 16, 1959.

Hon. WILLIAM L. DAWSON,
House of Representatives,
Washington, D.C.

MY DEAR MR. DAWSON: The estimated present-day evaluations of acreage under the jurisdiction of the Treasury Department as of June 30, 1959, which were requested in your letter of February 16, 1959, to the Secretary, and which have been the subject of discussions between representatives of our respective offices, are enclosed for the following:

U.S. Treasury Building.
Treasury Annex Building.
Bureau of the Mint: U.S. Bullion Depository, West Point.
Bureau of Customs installations.
U.S. Coast Guard installations.

If any further information is desired, it will be furnished upon request.

Very truly yours,

JOHN J. COUGHLIN
(For Director of Administrative Services).

U.S. TREASURY BUILDING AND TREASURY ANNEX, WASHINGTON, D.C.

State code	GSA control No.	Name of property	Property code	Usage code	How acquired	Acreage		Estimated present-day value
						Urban	Rural	
08	07810	U.S. Treasury Bldg	1	10	2	[1] 6.7		$19,394,000
08	07811	Treasury Annex Bldg	1	10	2	[1] .5		3,178,926

[1] Acreage as shown in report to GSA as of June 30, 1959.
The current plat books of the District of Columbia Assessor's Office, from which the estimated present-day value of the properties was obtained, show the areas, to building lines, to be:

	Acres
U.S. Treasury Bldg	5.5
Treasury Annex Bldg	.8

The estimated present-day values shown above are based on there figures.
The acreage in the Treasury Department's real property report to GSA as of June 30, 1960, will be corrected accordingly.

[1] Buildings, structures, and facilities computed at acquisition (known or estimated) cost, and these figures are included in the Federal realty section of this report.

DEPARTMENT OF AGRICULTURE,
Washington, D.C., November 2, 1959.

Hon. WILLIAM L. DAWSON,
Chairman, Executive and Legislative Reorganization Subcommittee of the Committee on Government Operations, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN DAWSON: Reference is made to your letter of February 24, 1959, and to our subsequent correspondence of June 19, and 26 in connection with estimates of the value of public domain realty administered by this Department as of June 30, 1959. Such estimates together with acreages are shown by State in the accompanying table.

The area of public domain realty administered by the Department as shown in the table is less than last year's figure by 14,412 acres. This figure represents for the most part the difference between a loss of nearly 35,000 acres of Bankhead-Jones title III lands transferred by Executive order to the Department of Interior and a gain of roughly 21,000 acres in the national forests. The national forest gain was the net result of land exchanges and of various minor acreage adjustments.

As in prior years, the data represent an attempt to determine the commercial value of public domain land and timber in terms of "fair market value" assuming the marketability of all lands. As before, no allowance has been made for public values for such important uses as water production. The estimated values furnished herewith are based upon those previously reported as adjusted to reflect acquisitions and disposals during the year. The value of mineral resources subject to disposal under the mining or mineral leasing laws are, as before, being reported to the committee by the Department of the Interior and are not included in the attached figures.

Sincerely yours,

RALPH S. ROBERTS,
Administrative Assistant Secretary.

Total United States	160,291,314	6,561,692
Puerto Rico	12,384	129
Grand total	160,303,698	6,561,821

[1] Includes national forests, Bankhead-Jones title III lands, and research and demonstration areas.
[2] Does not include certain areas of public domain lands in Eden Valley irrigation project administered under law as acquired land.

DEPARTMENT OF COMMERCE,
BUREAU OF PUBLIC ROADS,
Washington, D.C., September 18, 1959.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
Washington, D.C.

DEAR MR. DAWSON: In the absence of Mr. Tallamy, I am furnishing the information requested in your letter of February 16, 1959. The enclosed tabulation lists the public domain properties under the control of the Bureau of Public Roads as of June 30, 1959.

Except for the Seward Equipment Depot, all installations reported last year were transferred to the State of Alaska on June 30, 1959, under the provisions of the Alaska Omnibus Act (73 Stat. 141). Two new installations have been listed this year.

If we can be of further service, please do not hesitate to call on us.

Sincerely yours,

ELLIS L. ARMSTRONG,
Commissioner of Public Roads.

Name	Location	Usage	Acreage	Estimated present value of land	Value of fixed improvements	Total
Seward Depot	Seward, Alaska	Equipment depot	0.6	$600	$7,000	$7,600
Mile 11, Juneau	Juneau, Alaska	Maintenance camp	7.4	1,470	100	1,570
Girdwood	Girdwood, Alaska	Maintenance camp	.2	80	0	80
Total			8.2	2,150	7,100	9,250

DEPARTMENT OF COMMERCE,
COAST AND GEODETIC SURVEY,
Washington, D.C., October 20, 1959.

Hon. WILLIAM L. DAWSON,
Chairman, Executive and Legislative Subcommittee of the Committee on Government Operations, House of Representatives, Washington, D.C.

DEAR MR. DAWSON: Furnished in response to your letter dated February 13, 1959, is the attached information on public domain land held by this bureau.

The tabulated information does not include 1.37 acres of unimproved land transferred by this bureau from the Sitka, Alaska, site to the Forest Service, U.S. Department of Agriculture, on August 6, 1958, under Public Land Order 1707.

If additional information is required, we will be glad to comply with your request.

Sincerely yours,

H. ARNOLD KARO,
Rear Admiral, Coast and Geodetic Survey, Director.

Tucson Magnetic Observatory

1. Number of acres and location:
   a. Acres: 173.
   b. Location: Tucson, Puma County, Ariz.
2. Description of property:
   a. Land: Desert land located 10 miles east of Tucson.
   b. Buildings, all permanent:

Type	*Number*	*Floor space (Square feet)*
Office	1	1, 200
Houses	2	2, 766
Storage	3	778
Observatories	9	2, 747
Total	15	7, 491

   c. Facilities, all permanent:
      Fencing, 4,400 feet.
      Gasoline storage tank, 280 gallons.
      Well, 200 feet, with 5,000-gallon storage tank.
      Electrical distribution system.
      Sewage system.
3. Use of land and buildings: Primary magnetic observatory and seismograph stations.
4. Evaluation of land and buildings:

a. Land	$310, 000
b. Buildings	53, 000
c. Facilities	7. 000
Total	370, 000

Sitka Magnetic Observatory

1. Number of acres and location:
   a. Acres: 117.37.
   b. Location: Sitka, Baranoff Island, Alaska.
2. Description of property:
   a. Land: Wooded land on northern outskirts of Sitka.
   b. Buildings, all permanent:

Type	*Number*	*Floor space (Square feet)*
Houses	2	4, 551
Storage	1	323
Service	1	252
Observatory	3	2, 167
Total	7	7, 293

   c. Facilities, all permanent:
      Electrical distribution system.
      Roads and bridges.
      Sewage system.
      Water system.
3. Use of land and buildings: A primary magnetic observatory and seismological station.
4. Evaluation of lands and buildings:

a. Land	$35, 191
b. Buildings	51, 000
c. Facilities	4, 000
Total	90, 191

[1] Less than $500.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., December 8, 1959.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D.C.

DEAR MR. DAWSON: By letter of February 25, 1959, you requested this Department to furnish the House Committee on Government Operations certain data pertaining to the value of public domain lands, with the improvements thereon, which are under the control of this Department. You also requested that we again assume responsibility for reporting the estimated value of all public domain mineral resources which are under the jurisdiction of all Federal departments and agencies. Further, you requested a report on public domain acreage or properties including transfers to other departments and agencies.

Pursuant to this request and our understanding of your requirements as expressed in our letter to you of March 10, 1959, there are enclosed:

Table I. Estimated market value of public domain lands administered by the U.S. Department of the Interior, June 30, 1959.

Table II. Cost of buildings on public domain lands (administered by the U.S. Department of the Interior) as of June 30, 1959.

Table III. Cost of structures and facilities on public domain lands (administered by the U.S. Department of the Interior) as of June 30, 1959.

Table IV. Mineral resource value of the public domain (under the jurisdiction of all Federal departments and agencies) including the Outer Continental Shelf.

Table V. Changes in public domain withdrawals and restorations by Federal agencies, fiscal year 1959.

You asked that a further report be made on properties presently being carried at no value. As we indicated in our reply of March 10, 1959, to your letter of February 25, 1959, properties in this Department are listed in the GSA Annual Inventory of Owned Real Property at no value only under three conditions; namely, the land was public domain, the full market value at time of acquisition was less than $500, or else the lands were obtained for historical site purposes. Only the last category is subject to this special reporting requirement, and all of these lands are held by the National Park Service of this Department. There is enclosed also this special report, consisting of a summary sheet showing the required data for the entire United States, and then detailed sheets showing such data by States. The usage of the subject facilities is shown in block 26 of each report. All cost figures are in thousands of dollars, with the value of land shown in block 16 and the cost of buildings and structures shown in blocks 22 and 24.

Mineral income from most States has been adjusted slightly, but there has not been enough change during the year in estimating future production and income to justify revisions in the premises for the previous valuations.

Sincerely yours,

ELMER F. BENNETT,
Under Secretary of the Interior.

TABLE I.—*Estimated market value of public domain lands administered by U.S. Department of the Interior, June 30, 1959*

Estimate of October 1959

TABLE IV.—*Mineral resource [1] value of the public domain [2] (under the jurisidction of all Federal departments and agencies) including the Outer Continental Shelf*

[In thousands of dollars]

State	Value [3]	Principal sources
Alabama	$332	Coal; oil and gas.
Alaska [4]	42,000	Oil and gas; coal.
Arizona	4,404	Oil and gas; phosphate.
Arkansas	1,074	Oil and gas.
California	190,740	Oil and gas; sodium; potash.
Colorado	209,709	Oil and gas; coal; potash; sodium.
Florida	20	Oil and gas.
Idaho	9,216	Phosphate; oil and gas; coal.
Kansas	3,437	Oil and gas.
Louisiana	6,445	Do.
Michigan	43	Do.
Minnesota [5]	2,900	Copper and nickel.
Mississippi	215	Oil and gas.
Montana	109,344	Oil and gas; phosphate; coal.
Nebraska	473	Oil and gas.
Nevada	8,636	Do.
New Mexico	394,671	Oil and gas; potash; coal; sodium.
North Dakota	5,886	Oil and gas; coal.
Oklahoma	7,132	Coal; oil and gas.
Oregon	816	Oil and gas.
South Dakota	3,330	Oil and gas; coal.
Utah	152,846	Oil and gas; coal; potash; phosphate.
Washington	193	Oil and gas; coal.
Wyoming	706,893	Oil and gas; sodium; coal; phosphate.
Subtotal	1,860,745	
Outer Continental Shelf [6]	3,200,000	Oil and gas; sulphur.
Total, United States	5,060,745	

[1] For the purpose of establishing a "real estate" value of the public domain, mineral resource values are the capitalized value of income accruing to the Federal Treasury. This income is almost entirely derived from minerals subject to mineral leasing acts. Only negligible income is derived from minerals subject to location under the mining laws because they pass from Federal ownership upon discovery; before discovery, they have only speculative assignable value best reflected in the surface values. Building stone, sand and gravel, and similar materials subject to disposal under the materials act are also reflected in surface values.

[2] Includes lands transferred from the public domain; excludes acquired lands.

[3] Predicated on present receipts from mineral leases, licenses and permits taking into account probable future production and demand factors; capitalized (except where noted) as an annuity for 50 years at 4 percent compound interest and discounted to present value. Estimate of October 1959.

[4] Alaska oil and gas royalty estimates are capitalized as the present value, at 4 percent compound interest, of a 10-year annuity deferred 40 years.

[5] Minnesota copper and nickel royalty estimates are capitalized as the present value, at 4 percent compound interest, of a 25-year annuity deferred 25 years.

[6] The Outer Continental Shelf estimate is preliminary, subject to change with production experience, with litigation, and with technologic developments.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE,
OFFICE OF THE SECRETARY,
Washington, September 24, 1959.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D.C.

DEAR MR. DAWSON: Attached are the data concerning public domain properties and acreage of real property listed at zero value as requested in your letter of February 16, 1959.

Should you need further assistance, we will be happy to serve you.

Sincerely yours,

RUFUS E. MILES, Jr.,
Director of Administration.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Recapitulation of public domain properties, continental United States and Alaska' as of June 30, 1959

	Land		Buildings, structures, facilities (value)	Total value, land and improvements
	Number of acres	Estimated value		
United States	6.1	$1,471	$135,000	$136,471
Alaska	638.3	453,714	25,682,300	26,136,014
Total	644.4	455,185	25,817,300	26,272,485

GSA FORM 1166 MAY 1958

U.S. Department of Justice,
Bureau of Prisons,
Washington, August 18, 1959.

Re real property inventory, Federal Prison Service.

Hon. William L. Dawson,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D.C.

Dear Congressman: In your memorandum of February 16, 1959, you requested certain information regarding the three parcels of public domain lands under the jurisdiction of the Bureau of Prisons. The following data is submitted in accordance with our inventory of June 30, 1959:

U.S. Penitentiary, Alcatraz, Calif.—The acreage was changed during the past year from 12.7 to 22.5 acres. This change was concurred in by the U.S. Army Engineers and Coast and Geodetic Survey Service. The land value was changed to $178,000 based on 1934 records at time of transfer to us from the Army. The buildings are presently valued at $1,803,000 with other structures and facilities included at $403,000, making a total book value of $2,384,000.

Federal Reformatory, El Reno, Okla.—The 1,000 acres of public domain land is valued at $66,000 as reported last year. There were no buildings on the land when acquired. Buildings are presently valued at $1,941,000 and other structures and facilities at $201,000, making a total of $2,208,000.

U.S. Penitentiary, Leavenworth, Kans.—The 1,500 acres of public domain land is valued at $190,000. There is an increase of 235 acres over our 1958 report. These additional acres were reclaimed from the river bottom and should have been reported in past years. The present book value of the buildings is $5,111,000 and $442,000 for the other structures and facilities, making a total of $5,743,000.

The above values for public domain land are included in the 1959 General Services Administration report. Increases in totals for the Alcatraz and Leavenworth institutions were due to completion of major alteration projects. Decrease in the El Reno facilities is due to the disposal of the water filtration plant to the city of El Reno.

We trust the above information will assist your committee. Please advise if additional information is required.

Sincerely,

James V. Bennett, *Director.*

BUREAU OF PRISONS, DEPARTMENT OF JUSTICE

Recapitulation, public domain properties, as of June 30, 1959

Location and description	Acreage	Value of acreage	Value of buildings and facilities	Total
U.S. Penitentiary, Alcatraz, Calif	22.5	$178,000	$2,206,000	$2,384,000
Federal Reformatory, El Reno, Okla	1,000.0	66,000	2,142,000	2,208,000
U.S. Penitentiary, Leavenworth, Kans	1,500.0	190,000	5,553,000	5,743,000
Total	2,522.5	434,000	9,901,000	10,335,000

POST OFFICE DEPARTMENT,
ASSISTANT POSTMASTER GENERAL,
BUREAU OF FACILITIES,
Washington, D.C., September 18, 1959.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: Referring to your letter dated February 13, 1959, addressed to the Postmaster General, I am pleased to submit the following information relative to public domain properties in Alaska under the control of the Post Office Department as of June 30, 1959:

Location	Acres	Description	Land	Building	Total
Anchorage	2.0	Land and building	$687,000	$2,415,000	$3,102,000
Ketchikan	1.7	do	189,875	1,208,000	1,397,875
Sitka	.7	do	51,300	572,000	623,300
Wrangell	2.5	do	150,000	393,000	543,000
Total	6.9		1,078,175	4,588,000	5,666,175

The above is the estimated present-day valuation of the land and buildings.

The usage of all of these properties is to house the post office, courts, and other Federal offices.

If any additional information is desired, I will be very pleased to cooperate.

Sincerely yours,

ROLLIN D. BARNARD,
Assistant Postmaster General.

U.S. Coast Guard,
Washington, D.C., October 30, 1959.

Hon. William L. Dawson,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D.C.

My Dear Mr. Dawson: Your letter of February 13, 1959, set forth the need of your committee for certain data on public domain property under the control of the Coast Guard.

As promised in my letter of February 27, 1959, these data have been completed and the report is forwarded as enclosure (1). All costs are reported in thousands of dollars.

The report is submitted in the same format as last year and the usage codes are those assigned by the General Services Administration. A key to these codes is forwarded as enclosure (2).

Estimated present-day evaluations of land, buildings, and other structures and facilities were determined in accordance with the following procedures:

Land.—Evaluated on costs of adjoining properties and estimated fair market value.

Building.—Evaluated on estimated replacement cost less depreciation. Estimated replacement cost was determined by applying to the original acquisition cost the ratio of the Engineering News Record building cost index (or ENR construction cost index) for June 1959 divided by the corresponding index applicable at the time of construction.

Other structures and facilities.—The values were determined by the same method used for buildings.

Sincerely yours,

J. A. Hirshfield,
Rear Admiral, U.S. Coast Guard,
Acting Commandant.

U.S. TREASURY DEPARTMENT

U.S. Coast Guard

EXPLANATION:

Property Codes 1, 2, and 3 indicate whether an installation consists of land, buildings, and structures and facilities, respectively, or combinations thereof.

Usage Codes describe the predominant usage under each of these categories.

How Acquired Code applies to land only and indicates manner of acquisition.

EXAMPLE:

Entries 1 in the Property Code Column, 10 in the Usage Code Column, and 1 in the How Acquired Column would indicate that an installation includes land, used predominantly for locating office buildings thereon, and was acquired as public domain. This same installation might have other entries, such as 2 in the Property Code Column and 10 in the Usage Code Column which would indicate an office building.

HOW ACQUIRED CODE	DESCRIPTION
1	PUBLIC DOMAIN (Applicable only within the United States and in Alaska)
2	PURCHASE, DONATION, EXCHANGE, ETC.
3	LIFE INTEREST (Applicable only in Canal Zone and foreign countries)

Present-day value of Coast Guard holdings of public domain real property as of June 30, 1959—Continued

FEDERAL AVIATION AGENCY,
Washington, D.C., October 28, 1959.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: Reference is made to your letter of February 16, 1959, addressed to the Administrator, requesting certain data on public domain properties under the control of the Federal Aviation Agency as of June 30, 1959.

We are pleased to furnish the requested information, which is contained in the enclosed listing. Where no value of fixed improvements is shown, the beacon or other equipment located on the public domain is classified as personal property and as such is covered by other reports as personalty assets.

Sincerely,

ALAN L. DEAN,
Assistant Administrator for Management Services.

Federal Aviation Agency

[1] FAA facilities at these locations have been discontinued and the land reported to the Department of the Interior. The restoration orders have not been issued.

[2] Transfer of this property to Riverside County for public airport purposes is pending.

GENERAL SERVICES ADMINISTRATION,
Washington, D.C., October 29, 1959.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to your letter of February 16, 1959, enclosed is a tabulation of the approximate market values of public domain properties under control of the General Services Administration as of June 30, 1959. The tabulation is annotated to describe changes since our report of last year.

A review of General Services Administration's accounting records shows no land (other than public domain) recorded at zero or $1 for accounting purposes.

For inventory purposes, the acquisition cost of Federal real property is reported to the nearest thousand dollars. Accordingly, the detailed inventory listings show a zero cost for land acquired at less than $500.

Sincerely yours,

FRANKLIN FLOETE, *Administrator.*

Estimates of approximate present-day values of public domain properties for which GSA is responsible as of June 30, 1959

Name and location	Acreage	Estimated approximate present-day value (in thousands of dollars)		
		Land	Buildings	Total
Border station, San Luis, Ariz.	[1] 5.0	$2	$113	$115
Border station, Lukeville, Ariz.	2.0	([2])	[3] 24	24
Border station, Babb, Mont.	.7	([2])	[3] 179	179
Total	7.7	2	316	318

[1] Acreage decrease represents correction of previously reported data.
[2] Less than $500.
[3] Increase in estimated present-day value reflects capital improvements and updated replacement costs.

VETERANS' ADMINISTRATION,
Washington, D.C., October 20, 1959.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives, Washington, D.C.

DEAR MR. DAWSON: As requested in your letter of February 13, 1959, there is enclosed a list showing the desired information concerning public domain properties under jurisdiction of the Veterans' Administration.

Sincerely yours,

SUMNER G. WHITTIER,
Administrator.

Public domain properties under jurisdiction of the Veterans' Administration on June 30, 1959

Station	Number of acres	Description of property	Usage	Estimated present-day value

ATOMIC ENERGY COMMISSION,
Washington, D.C., October 15, 1959.

Hon. WILLIAM L. DAWSON,
Chairman, Committee on Government Operations,
House of Representatives.

DEAR MR. DAWSON: Reference is made to your letter to the General Manager dated February 13, 1959, requesting information as to the value as of June 30, 1959, of the public domain land used by the Atomic Energy Commission and the value as of the same date of the AEC-owned improvements on such land.

Enclosed is a staff report with attachments furnishing the requested information.

Sincerely yours,

A. R. LUEDECKE,
General Manager.

ATOMIC ENERGY COMMISSION,
Washington, D.C.

Subject: Present value of public domain land used by AEC and the present value of AEC improvements on such land.

Reference: Letter to the General Manager, AEC, from chairman, House of Representatives Committee on Government Operations, dated February 13, 1959, relating to the above subject.

Attached is a tabulation, by States, showing (1) the area, the value as of June 30, 1959, and usage of the public domain land controlled by the Atomic Energy Commission in connection with its operations, (2) the number, classification, and the value as of June 30, 1959, of "Other Structures and Facilities" constructed on such land by the AEC. The statistical tabulation has been prepared on the basis of information furnished by operations offices using public domain land in accordance with the following instructions:

1. Public domain: For the purpose of the report, the term "public domain" was defined as that land within the continental United States and Alaska, title to which was acquired by the United States of America by treaty, conquest, or cession from the Thirteen Original Colonies, and such title is still vested in the United States.

2. Present value of public domain land: The values shown cover the surface land only. Our operations offices were advised it was not desired that a formal appraisal be made of such surface land. The land values reported this year are greater than those reported last year. In general, such values are based upon information secured informally from the Department of the Interior as to the estimated value of public domain lands in 1959, for various categories of public domain land as fixed by the Department of the Interior, in those States in which the AEC is using public domain land.

3. Present value of buildings: That such value could be estimated with sufficient accuracy by taking the total net book cost as of June 30, 1959, for each classification of buildings reported and applying the

ratio of Engineering News Record for June 1959 (building or construction) for the applicable geographical area divided by the corresponding Engineering News Record index applicable at the time of construction. The value of "Other Structures and Facilities" were to be determined by the same method. In general, this is a cost of reproduction which takes into account depreciation.

General: When "Buildings" and "Other Structures and Facilities" were located on public-domain land and non-public-domain land, effort has been made to prorate that portion on the public domain land. The value for "Buildings" excludes the cost of equipment which is not capitalized as a part of the cost of the buildings.

There has been no change in the status of the 38,400 acres of land referred to in the last paragraph of the narrative statement accompanying subject tabulation as of June 30, 1958.

INTERNATIONAL BOUNDARY AND WATER COMMISSION,
UNITED STATES AND MEXICO,
El Paso, Tex., September 9, 1959.

Hon. WILLIAM L. DAWSON,
Chairman, House of Representatives Committee on Government Operations, Washington, D.C.

DEAR MR. DAWSON: In accordance with your request of February 13, 1959, for data concerning public domain properties under jurisdiction of this Section as of June 30, 1959, there are transmitted herewith two copies of a table showing:

1. Number of public domain acres under jurisdiction of this Section as of June 30, 1959.
2. Location, description, and usage made of property.
3. Value of buildings and facilities on the property (not including personalty).
4. Value of land itself.

Very truly yours,

L. H. HEWITT, *Commissioner.*

INTERNATIONAL BOUNDARY AND WATER COMMISSION UNITED STATES AND MEXICO U.S. SECTION

Estimate of present-day market value of public domain property under jurisdiction of this commission,[1] as of June 30, 1959

Location [2]	(1) Number of acres	(2) Usage made of property	(3) Estimated value of facilities [3]	(4) Estimated value of land

Lot 1, sec. 29; lots 5, 6, 7, and 8, sec. 30; all of sec. 31, T. 24 S., and lot 5, sec. 4; lots 4, 10, 11, and 12, sec. 5; N½NE¼, NE¼NW¼ and lot 1, sec. 6, T. 25 S., all in R. 2 E., New Mexico principal meridian, Dona Ana County, N. Mex. (E.O.F. 1025).	1,145.33	do	None	3,436.00
NE¼, sec. 24, T. 19 S., R. 3 W., New Mexico principal meridian, Dona Ana County, N. Mex. (E.O.F. 1022).	160.16	do	None	801.00
SW¼ sec. 4, T. 19 S., R. 2 W., New Mexico principal meridian, Dona Ana County, N. Mex. (E.O.F. 1027–2).	160.00	do	None	800.00
All of sec. 33, T. 17 S., R. 4 W., New Mexico principal meridian, Sierra County, N. Mex.	640.00	do	None	3,200.00
All of sec. 4, T. 17 S., R. 4 W., New Mexico principal meridian, Sierra County, N. Mex.	579.80	do	None	3,000.00
Subtotal	3,515.87		22,632.00	14,617.00
MORELOS DAM				
Fractional sec. 28, T. 8 S., R. 24 W., Gila and Salt River base and meridian, Yuma County, Ariz.:				
Lot 2	3.78	Project right-of way.	None	283.50
Lot 5	0.24	do	None	48.00
Part lot 8 (west of Yuma levee)	8.93	do	None	669.75
Part lot 10 (west of Yuma levee)	6.38	do	None	1,276.00
Subtotal	[5] 19.33			2,277.25
Total	3,535.20		22,632.00	16,894.25

[1] 3,535.20 acres of public domain property are under jurisdiction of this Commission.
[2] (E.O.F. Nos.) shown in location description are IB&WC file numbers.
[3] The facilities shown were constructed by the project and are described as follows:
[a] River channel and river bank protected by rock.
[b] River channel.
[c] River channel, river bank protected by rock, and levee.
[d] Canyon diversion—channel and dyke.
[4] All the land under this heading is in the Rio Grande canalization project or is used as source of materials used on the project.
[5] Above 19.33 acres are at Morelos Dam on the Colorado River and were withdrawn for use of the Department of State in connection with Mexican Water Treaty of Feb. 3, 1944.
